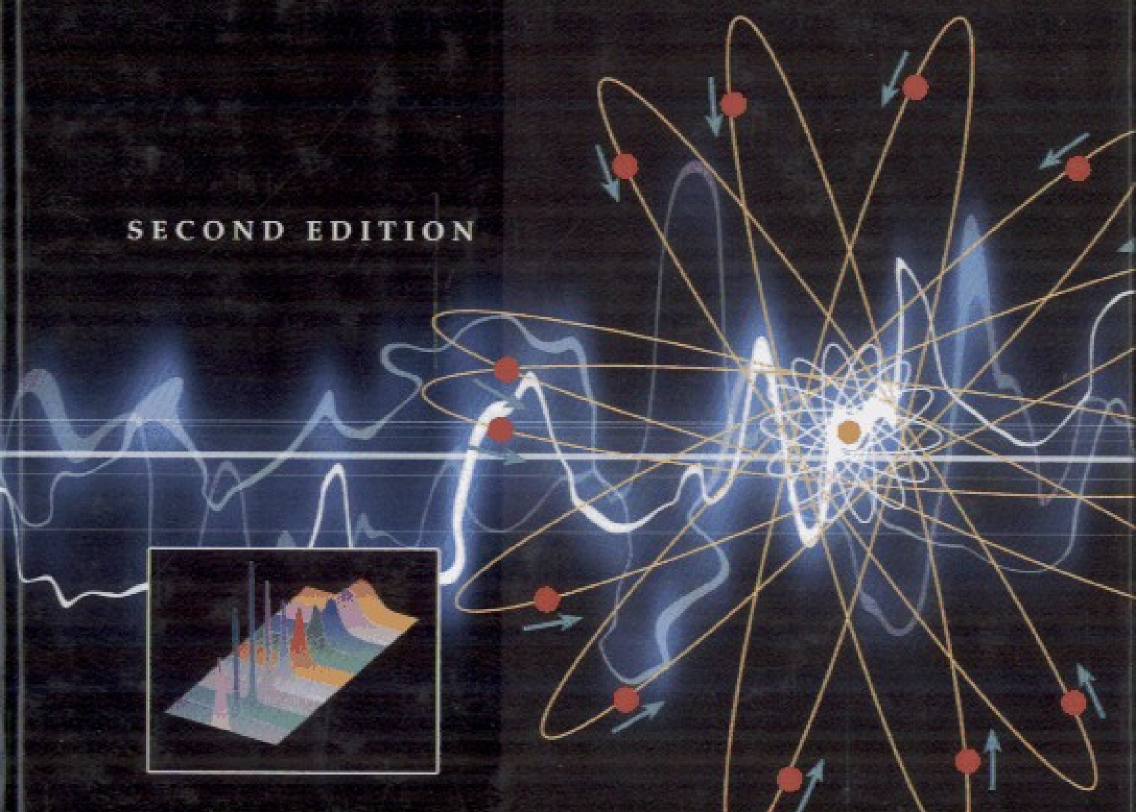
Ultrashort Laser Pulse Phenomena

Fundamentals, Techniques, and Applications on a Femtosecond Time Scale

SECOND EDITION



Jean-Claude Diels
Wolfgang Rudolph

Contents

Preface xv
Preface to the First Edition xvii

Chapter 1 Fundamentals 1
1.1. Characteristics of Femtosecond Light Pulses 1
1.1.1. Complex Representation of the Electric Field 1
1.1.2. Power, Energy, and Related Quantities 6
1.1.3. Pulse Duration and Spectral Width 9
1.1.4. Wigner Distribution, Second-Order Moments, Uncertainty Relations 12
1.2. Pulse Propagation 20
1.2.1. The Reduced Wave Equation 21
1.2.2. Retarded Frame of Reference 26
1.2.3. Dispersion 30
1.2.4. Gaussian Pulse Propagation 33
1.2.5. Complex Dielectric Constant 38
1.3. Interaction of Light Pulses with Linear Optical Elements 42
1.4. Generation of Phase Modulation 44
1.5. Beam Propagation 46
1.5.1. General 46
1.5.2. Analogy between Pulse and Beam Propagation 49
1.5.3. Analogy between Spatial and Temporal Imaging 50
1.6. Numerical Modeling of Pulse Propagation 53
1.7. Space–Time Effects 56
1.8. Problems 57
Bibliography 58

Chapter 2 Femtosecond Optics 61
2.1. Introduction 61
2.2. White Light and Short Pulse Interferometry 64

2.3. Dispersion of Interferometric Structures 70
2.3.1. Mirror Dispersion 70
2.3.2. Fabry–Perot and Gires–Tournois Interferometer 73
2.3.3. Chirped Mirrors 80
2.4. Focusing Elements 82
2.4.1. Singlet Lenses 82
2.4.2. Space–Time Distribution of the Pulse Intensity at the Focus of a Lens 86
2.4.3. Achromatic Doublets 91
2.4.4. Focusing Mirrors 92
2.5. Elements with Angular Dispersion 94
2.5.1. Introduction 94
2.5.2. Tilting of Pulse Fronts 95
2.5.3. GVD through Angular Dispersion—General 100
2.5.4. GVD of a Cavity Containing a Single Prism 102
2.5.5. Group Velocity Control with Pairs of Prisms 105
2.5.6. GVD Introduced by Gratings 117
2.5.7. Grating Pairs for Pulse Compressors 120
2.5.8. Combination of Focusing and Angular Dispersive Elements 122
2.6. Wave-Optical Description of Angular Dispersive Elements 124
2.7. Optical Matrices for Dispersive Systems 130
2.8. Numerical Approaches 136
2.9. Problems 136
Bibliography 140

Chapter 3 Light–Matter Interaction 143
3.1. Density Matrix Equations 144
3.2. Pulse Shaping with Resonant Particles 154
3.2.1. General 154
3.2.2. Pulses Much Longer Than the Phase Relaxation Time ($\tau_p \gg T_2$) 156
3.2.3. Phase Modulation by Quasi-Resonant Interactions 161
3.2.4. Pulse Durations Comparable with or Longer Than the Phase Relaxation Time ($\tau_p \geq T_2$) 165
3.3. Nonlinear, Nonresonant Optical Processes 166
3.3.1. General 166
3.3.2. Noninstantaneous Response 168
3.3.3. Pulse Propagation 170

3.4. Second Harmonic Generation (SHG) 172
3.4.1. Type I Second Harmonic Generation 173
3.4.2. Second Harmonic Type II: Equations for Arbitrary Phase Mismatch and Conversion Efficiencies 180
3.4.3. Pulse Shaping in Second Harmonic Generation (Type II) 183
3.4.4. Group Velocity Control in SHG through Pulse Front Tilt 185
3.5. Optical Parametric Interaction 188
3.5.1. Coupled Field Equations 188
3.5.2. Synchronous Pumping 190
3.5.3. Chirp Amplification 190
3.6. Third-Order Susceptibility 192
3.6.1. Fundamentals 192
3.6.2. Short Samples with Instantaneous Response 195
3.6.3. Short Samples and Noninstantaneous Response 197
3.6.4. Counter-Propagating Pulses and Third-Order Susceptibility 199
3.7. Continuum Generation 202
3.8. Self-Focusing 205
3.8.1. Critical Power 205
3.8.2. The Nonlinear Schrödinger Equation 208
3.9. Beam Trapping and Filaments 209
3.9.1. Beam Trapping 209
3.9.2. Ultrashort Pulse Self-Focusing 212
3.10. Problems 213
Bibliography 215

Chapter 4 Coherent Phenomena 221
4.1. From Coherent to Incoherent Interactions 221
4.2. Coherent Interactions with Two-Level Systems 225
4.2.1. Maxwell–Bloch Equations 225
4.2.2. Rate Equations 229
4.2.3. Evolution Equations 230
4.2.4. Steady-State Pulses 239
4.3. Multiphoton Coherent Interaction 243
4.3.1. Introduction 243
4.3.2. Multiphoton Multilevel Transitions 245
4.3.3. Simplifying a N-Level System to a Two-Level Transition 258

4.3.4. Four Photon Resonant Coherent Interaction 262
4.3.5. Miscellaneous Applications 268
4.4. Problems 272
Bibliography 273

Chapter 5 Ultrashort Sources I: Fundamentals 277
5.1. Introduction 277
5.1.1. Superposition of Cavity Modes 277
5.1.2. Cavity Modes and Modes of a Mode-Locked Laser 280
5.1.3. The "Perfect" Mode-Locked Laser 283
5.1.4. The "Common" Mode-Locked Laser 285
5.1.5. Basic Elements and Operation of a fs Laser 291
5.2. Circulating Pulse Model 293
5.2.1. General Round-Trip Model 293
5.2.2. Continuous Model 295
5.2.3. Elements of a Numerical Treatment 298
5.2.4. Elements of an Analytical Treatment 300
5.3. Evolution of the Pulse Energy 303
5.3.1. Rate Equations for the Evolution of the Pulse Energy 304
5.3.2. Connection of the Model to Microscopic Parameters 311
5.4. Pulse Shaping in Intracavity Elements 314
5.4.1. Saturation 315
5.4.2. Nonlinear Nonresonant Elements 317
5.4.3. Self-Lensing 320
5.4.4. Summary of Compression Mechanisms 323
5.4.5. Dispersion 323
5.5. Cavities 325
5.5.1. Cavity Modes and ABCD Matrix Analysis 325
5.5.2. Astigmatism and Its Compensation 328
5.5.3. Cavity with a Kerr Lens 332
5.6. Problems 335
Bibliography 337

Chapter 6 Ultrashort Sources II: Examples 341
6.1. Synchronous Mode-Locking 341
6.2. Hybrid Mode-Locking 345
6.3. Additive Pulse Mode-Locking 346
6.3.1. Generalities 346
6.3.2. Analysis of APML 348

6.4.	Mode-Locking Based on Nonresonant Nonlinearity	349
	6.4.1. Nonlinear Mirror	349
	6.4.2. Polarization Rotation	351
6.5.	Negative Feedback	352
6.6.	Semiconductor-Based Saturable Absorbers	356
6.7.	Solid-State Lasers	358
	6.7.1. Generalities	358
	6.7.2. Ti:sapphire Laser	360
	6.7.3. Cr:LiSAF, Cr:LiGAF, Cr:LiSGAF, and Alexandrite	364
	6.7.4. Cr:Forsterite and Cr:Cunyite Lasers	366
	6.7.5. YAG Lasers	367
	6.7.6. Nd:YVO_4 and Nd:YLF	370
6.8.	Semiconductor and Dye Lasers	371
	6.8.1. Dye Lasers	371
	6.8.2. Semiconductor Lasers	374
6.9.	Fiber Lasers	378
	6.9.1. Introduction	378
	6.9.2. Raman Soliton Fiber Lasers	379
	6.9.3. Doped Fiber Lasers	380
	6.9.4. Mode-Locking through Polarization Rotation	381
	6.9.5. Figure-Eight Laser	384
Bibliography		386
Chapter 7	**Femtosecond Pulse Amplification**	**395**
7.1.	Introduction	395
7.2.	Fundamentals	396
	7.2.1. Gain Factor and Saturation	396
	7.2.2. Shaping in Amplifiers	400
	7.2.3. Amplified Spontaneous Emission (ASE)	404
7.3.	Nonlinear Refractive Index Effects	406
	7.3.1. General	406
	7.3.2. Self-Focusing	409
	7.3.3. Thermal Noise	410
	7.3.4. Combined Pulse Amplification and Chirping	411
7.4.	Chirped Pulse Amplification (CPA)	412
7.5.	Amplifier Design	414
	7.5.1. Gain Media and Pump Pulses	414
	7.5.2. Amplifier Configurations	416
	7.5.3. Single-Stage, Multipass Amplifiers	418
	7.5.4. Regenerative Amplifiers	421
	7.5.5. Traveling Wave Amplification	422

7.6. Optical Parametric Chirped Pulse Amplification (OPCPA) 426
7.7. Problems 427
Bibliography 429

Chapter 8 Pulse Shaping **433**
8.1. Pulse Compression 433
8.1.1. General 433
8.1.2. The Fiber Compressor 437
8.1.3. Pulse Compression Using Bulk Materials 450
8.2. Shaping through Spectral Filtering 451
8.3. Problems 454
Bibliography 455

Chapter 9 Diagnostic Techniques **457**
9.1. Intensity Correlations 458
9.1.1. General Properties 458
9.1.2. The Intensity Autocorrelation 458
9.1.3. Intensity Correlations of Higher Order 459
9.2. Interferometric Correlations 459
9.2.1. General Expression 459
9.2.2. Interferometric Autocorrelation 462
9.3. Measurement Techniques 466
9.3.1. Nonlinear Optical Processes for Measuring Femtosecond Pulse Correlations 466
9.3.2. Recurrent Signals 466
9.3.3. Single Shot Measurements 468
9.4. Pulse Amplitude and Phase Reconstruction 473
9.4.1. Introduction 473
9.4.2. Methods for Full-Field Characterization of Ultrashort Light Pulses 474
9.4.3. Retrieval from Correlation and Spectrum 477
9.4.4. Frequency Resolved Optical Gating (FROG) 480
9.4.5. Spectral Phase Interferometry for Direct Electric Field Reconstruction (SPIDER) 484
9.5. Problems 485
Bibliography 486

Chapter 10 Measurement Techniques of Femtosecond Spectroscopy **491**
10.1. Introduction 491
10.2. Data Deconvolutions 493

10.3. Beam Geometry and Temporal Resolution 494
10.4. Transient Absorption Spectroscopy 497
10.5. Transient Polarization Rotation 500
10.6. Transient Grating Techniques 503
10.6.1. General Technique 503
10.6.2. Degenerate Four Wave Mixing (DFWM) 506
10.7. Femtosecond Resolved Fluorescence 509
10.8. Photon Echoes 512
10.9. Zero Area Pulse Propagation 515
10.10. Impulsive Stimulated Raman Scattering 518
10.10.1. General Description 518
10.10.2. Detection 520
10.10.3. Theoretical Framework 522
10.10.4. Single Pulse Shaping Versus Mode-Locked Train 524
10.11. Self-Action Experiments 526
10.12. Problems 528
Bibliography 529

Chapter 11 Examples of Ultrafast Processes in Matter 531
11.1. Introduction 531
11.2. Ultrafast Transients in Atoms 532
11.2.1. The Classical Limit of the Quantum Mechanical Atom 532
11.2.2. The Radial Wave Packet 532
11.2.3. The Angularly Localized Wave Packet 534
11.3. Ultrafast Processes in Molecules 536
11.3.1. Observation of Molecular Vibrations 536
11.3.2. Chemical Reactions 540
11.3.3. Molecules in Solution 543
11.4. Ultrafast Processes in Solid-State Materials 544
11.4.1. Excitation across the Band Gap 544
11.4.2. Excitons 545
11.4.3. Intraband Relaxation 545
11.4.4. Phonon Dynamics 547
11.4.5. Laser-Induced Surface Disordering 549
11.5. Primary Steps in Photo–Biological Reactions 550
11.5.1. Femtosecond Isomerization of Rhodopsin 550
11.5.2. Photosynthesis 551
Bibliography 553

Chapter 12 Generation of Extreme Wavelengths **557**
12.1. Generation of Terahertz (THz) Radiation 558
12.2. Generation of Ultrafast X-Ray Pulses 565
12.2.1. Incoherent Bursts of X-Rays 565
12.2.2. High Harmonics (HH) and Attosecond Pulse Generation 566
12.3. Generation of Ultrashort Acoustic Pulses 568
12.4. Generation of Ultrafast Electric Pulses 571
Bibliography 575

Chapter 13 Selected Applications **579**
13.1. Imaging 579
13.1.1. Introduction 579
13.1.2. Range Gating with Ultrashort Pulses 580
13.1.3. Imaging through Scatterers 583
13.1.4. Prospects for Four-Dimensional Imaging 585
13.1.5. Microscopy 586
13.2. Solitons 590
13.2.1. Temporal Solitons 590
13.2.2. Spatial Solitons and Filaments 592
13.2.3. Spatial and Temporal Solitons 597
13.3. Sensors Based on fs Lasers 598
13.3.1. Description of the Operation 598
13.3.2. Inertial Measurements (Rotation and Acceleration) 601
13.3.3. Measurement of Changes in Index 603
13.4. Stabilized Mode-Locked Lasers for Metrology 609
13.4.1. Measurement of the Carrier to Envelope Offset (CEO) 610
13.4.2. Locking of fs Lasers to Stable Reference Cavities 614
13.5. Problem 616
Bibliography 617

Appendix A The Uncertainty Principle **623**

Appendix B Phase Shifts on Transmission and Reflection **625**
B.1. The Symmetrical Interface 625
B.2. Coated Interface between Two Different Dielectrics 626

Appendix C Slowly Evolving Wave Approximation **629**

Appendix D Four-Photon Coherent Interaction **633**

Appendix E Kerr Lensing in a Cavity **637**

E.1. Elementary Kerr Lensing Model 637

E.2. Example of a Nonlinear Cavity and Gaussian Beam Analysis 638

Appendix F Abbreviations for Dyes **643**

List of Symbols **645**

Index **647**
