

BASIC BIOMECHANICS

Fifth Edition

SUSAN B. HALL

McGRAW·HILL INTERNATIONAL EDITION

CONTENTS

1	What Is Biomechanics?	1
	Biomechanics: Definition and Perspective	2
	What Problems Are Studied by Biomechanists?	4
	Why Study Biomechanics?	12
	Problem-Solving Approach	12
	Quantitative versus Qualitative Problems	13
	Solving Qualitative Problems	14
	Formal versus Informal Problems	14
	Solving Formal Quantitative Problems	15
	Units of Measurement	16
	Summary	19
	Introductory Problems	19
	Additional Problems	20
	Laboratory Experiences	21
2	Kinematic Concepts for Analyzing Human Motion	29
	Forms of Motion	30
	Linear Motion	30
	Angular Motion	30
	General Motion	31
	Mechanical Systems	31
	Standard Reference Terminology	32
	Anatomical Reference Position	32
	Directional Terms	33
	Anatomical Reference Planes	34
	Anatomical Reference Axes	34
	Joint Movement Terminology	37
	Sagittal Plane Movements	37
	Frontal Plane Movements	38
	Transverse Plane Movements	40
	Other Movements	40
	Spatial Reference Systems	42
	Qualitative Analysis of Human Movement	42
	Prerequisite Knowledge for a Qualitative Analysis	43
	Planning a Qualitative Analysis	44
	Conducting a Qualitative Analysis	47
	Tools for Measuring Kinematic Quantities	50
	Video and Film	50
	Other Movement-Monitoring Systems	51
	Other Assessment Tools	51
	Summary	53
	Introductory Problems	53
	Additional Problems	54
	Laboratory Experiences	55

3 Kinetic Concepts for Analyzing Human Motion 61

Basic Concepts Related to Kinetics	62
Inertia	62
Mass	63
Force	63
Center of Gravity	64
Weight	64
Pressure	66
Volume	66
Density	68
Torque	68
Impulse	69
Mechanical Loads on the Human Body	70
Compression, Tension, and Shear	70
Mechanical Stress	71
Torsion, Bending, and Combined Loads	72
The Effects of Loading	72
Repetitive versus Acute Loads	74
Tools for Measuring Kinetic Quantities	75
Electromyography	75
Dynamography	75
Vector Algebra	76
Vector Composition	76
Vector Resolution	77
Graphic Solution of Vector Problems	78
Trigonometric Solution of Vector Problems	78
Summary	80
Introductory Problems	80
Additional Problems	81
Laboratory Experiences	83

4 The Biomechanics of Human Bone Growth and Development 87

Composition and Structure of Bone Tissue	88
Material Constituents	88
Structural Organization	88
Types of Bones	90
Bone Growth and Development	92
Longitudinal Growth	92
Circumferential Growth	93
Adult Bone Development	93
Bone Response to Stress	94
Bone Modeling and Remodeling	94
Bone Hypertrophy	96
Bone Atrophy	96
Osteoporosis	98
Postmenopausal and Age-Associated Osteoporosis	99
Female Athlete Triad	99
Preventing and Treating Osteoporosis	100

Common Bone Injuries	102
Fractures	102
Epiphyseal Injuries	104
Summary	105
Introductory Problems	105
Additional Problems	106
Laboratory Experiences	107

5 The Biomechanics of Human Skeletal Articulations 119

Joint Architecture	120
Immovable Joints	120
Slightly Movable Joints	120
Freely Movable Joints	121
Articular Cartilage	123
Articular Fibrocartilage	123
Articular Connective Tissue	124
Joint Stability	125
Shape of the Articulating Bone Surfaces	125
Arrangement of Ligaments and Muscles	126
Other Connective Tissues	126
Joint Flexibility	127
Measuring Joint Range of Motion	127
Factors Influencing Joint Flexibility	128
Flexibility and Injury	130
Techniques for Increasing Joint Flexibility	131
Neuromuscular Response to Stretch	131
Active and Passive Stretching	133
Ballistic and Static Stretching	134
Proprioceptive Neuromuscular Facilitation	134
Common Joint Injuries and Pathologies	136
Sprains	136
Dislocations	136
Bursitis	136
Arthritis	136
Rheumatoid Arthritis	136
Osteoarthritis	137
Summary	137
Introductory Problems	138
Additional Problems	138
Laboratory Experiences	141

6 The Biomechanics of Human Skeletal Muscle 149

Behavioral Properties of the Musculotendinous Unit	150
Extensibility and Elasticity	150
Irritability and the Ability to Develop Tension	151
Structural Organization of Skeletal Muscle	151
Muscle Fibers	152
Motor Units	155
Fiber Types	156
Fiber Architecture	159

Skeletal Muscle Function	161
Recruitment of Motor Units	161
Change in Muscle Length with Tension Development	163
Roles Assumed by Muscles	163
Two-Joint and Multijoint Muscles	164
Factors Affecting Muscular Force Generation	166
Force–Velocity Relationship	166
Length–Tension Relationship	167
Stretch–Shortening Cycle	167
Electromechanical Delay	169
Muscular Strength, Power, and Endurance	169
Muscular Strength	169
Muscular Power	172
Muscular Endurance	173
Muscle Fatigue	173
Effect of Muscle Temperature	174
Common Muscle Injuries	175
Strains	175
Contusions	175
Cramps	175
Delayed-Onset Muscle Soreness	176
Compartment Syndrome	176
Summary	176
Introductory Problems	176
Additional Problems	177
Laboratory Experiences	179

7 The Biomechanics of the Human Upper Extremity 187

Structure of the Shoulder	188
Sternoclavicular Joint	188
Acromioclavicular Joint	189
Coracoclavicular Joint	189
Glenohumeral Joint	189
Scapulothoracic Joint	191
Bursae	192
Movements of the Shoulder Complex	192
Muscles of the Scapula	193
Muscles of the Glenohumeral Joint	194
Flexion at the Glenohumeral Joint	196
Extension at the Glenohumeral Joint	196
Abduction at the Glenohumeral Joint	196
Adduction at the Glenohumeral Joint	196
Medial and Lateral Rotation of the Humerus	197
Horizontal Adduction and Abduction at the Glenohumeral Joint	198
Loads on the Shoulder	199
Common Injuries of the Shoulder	202
Dislocations	202
Rotator Cuff Damage	202
Rotational Injuries	203
Subscapular Neuropathy	204

Structure of the Elbow	204
Humeroulnar Joint	204
Humeroradial Joint	204
Proximal Radioulnar Joint	205
Carrying Angle	205
Movements at the Elbow	206
Muscles Crossing the Elbow	206
Flexion and Extension	206
Pronation and Supination	207
Loads on the Elbow	209
Common Injuries of the Elbow	211
Sprains and Dislocations	211
Overuse Injuries	211
Structure of the Wrist	212
Movements of the Wrist	213
Flexion	213
Extension and Hyperextension	214
Radial and Ulnar Deviation	214
Structure of the Joints of the Hand	215
Carpometacarpal and Intermetacarpal Joints	216
Metacarpophalangeal Joints	216
Interphalangeal Joints	217
Movements of the Hand	217
Common Injuries of the Wrist and Hand	219
Summary	220
Introductory Problems	220
Additional Problems	221
Laboratory Experiences	223

8 The Biomechanics of the Human Lower Extremity 231

Structure of the Hip	232
Movements at the Hip	233
Muscles of the Hip	233
Flexion	234
Extension	235
Abduction	236
Adduction	236
Medial and Lateral Rotation of the Femur	237
Horizontal Abduction and Adduction	237
Loads on the Hip	238
Common Injuries of the Hip	240
Fractures	240
Contusions	240
Strains	240
Structure of the Knee	240
Tibiofemoral Joint	240
Menisci	241
Ligaments	242
Patellofemoral Joint	243
Joint Capsule and Bursae	243

Movements at the Knee	244
Muscles Crossing the Knee	244
Flexion and Extension	244
Rotation and Passive Abduction and Adduction	246
Patellofemoral Joint Motion	246
Loads on the Knee	246
Forces at the Tibiofemoral Joint	246
Forces at the Patellofemoral Joint	247
Common Injuries of the Knee and Lower Leg	249
Anterior Cruciate Ligament Injuries	249
Posterior Cruciate Ligament Injuries	250
Medial Collateral Ligament Injuries	250
Prophylactic Knee Bracing	251
Meniscus Injuries	251
Iliotibial Band Friction Syndrome	251
Breaststroker's Knee	252
Patellofemoral Pain Syndrome	252
Shin Splints	253
Structure of the Ankle	253
Movements at the Ankle	254
Structure of the Foot	256
Subtalar Joint	256
Tarsometatarsal and Intermetatarsal Joints	257
Metatarsophalangeal and Interphalangeal Joints	257
Plantar Arches	257
Movements of the Foot	258
Muscles of the Foot	258
Toe Flexion and Extension	258
Inversion and Eversion	258
Pronation and Supination	258
Loads on the Foot	260
Common Injuries of the Ankle and Foot	260
Ankle Injuries	261
Overuse Injuries	261
Alignment Anomalies of the Foot	262
Injuries Related to High and Low Arch Structures	263
Summary	264
Introductory Problems	264
Additional Problems	265
Laboratory Experiences	267

9 The Biomechanics of the Human Spine 277

Structure of the Spine	278
Vertebral Column	278
Vertebrae	279
Intervertebral Discs	280
Ligaments	284
Spinal Curves	285
Movements of the Spine	287
Flexion, Extension, and Hyperextension	288
Lateral Flexion and Rotation	288

Muscles of the Spine	289
Anterior Aspect	289
Posterior Aspect	292
Lateral Aspect	294
Loads on the Spine	296
Common Injuries of the Back and Neck	302
Low Back Pain	302
Soft-Tissue Injuries	304
Acute Fractures	304
Stress Fractures	305
Disc Herniations	306
Whiplash Injuries	307
Summary	307
Introductory Problems	308
Additional Problems	308
Laboratory Experiences	311

10 Linear Kinematics of Human Movement 321

Linear Kinematic Quantities	322
Distance and Displacement	323
Speed and Velocity	324
Acceleration	329
Average and Instantaneous Quantities	333
Kinematics of Projectile Motion	333
Horizontal and Vertical Components	333
Influence of Gravity	334
Influence of Air Resistance	335
Factors Influencing Projectile Trajectory	336
Projection Angle	337
Projection Speed	338
Relative Projection Height	340
Optimum Projection Conditions	340
Analyzing Projectile Motion	342
Equations of Constant Acceleration	344
Summary	349
Introductory Problems	349
Additional Problems	350
Laboratory Experiences	353

11 Angular Kinematics of Human Movement 359

Observing the Angular Kinematics of Human Movement	360
Measuring Angles	360
Relative versus Absolute Angles	361
Tools for Measuring Body Angles	362
Instant Center of Rotation	364
Angular Kinematic Relationships	364
Angular Distance and Displacement	365
Angular Speed and Velocity	367
Angular Acceleration	370
Angular Motion Vectors	373
Average versus Instantaneous Angular Quantities	374

Relationships Between Linear and Angular Motion	374
Linear and Angular Displacement	374
Linear and Angular Velocity	375
Linear and Angular Acceleration	377
Summary	380
Introductory Problems	380
Additional Problems	381
Laboratory Experiences	383

12 Linear Kinetics of Human Movement 387

Newton's Laws	388
Law of Inertia	388
Law of Acceleration	388
Law of Reaction	389
Law of Gravitation	392
Mechanical Behavior of Bodies in Contact	393
Friction	393
Momentum	398
Impulse	401
Impact	403
Work, Power, and Energy Relationships	407
Work	407
Power	408
Energy	408
Conservation of Mechanical Energy	410
Principle of Work and Energy	411
Summary	414
Introductory Problems	415
Additional Problems	415
Laboratory Experiences	417

13 Equilibrium and Human Movement 423

Equilibrium	424
Torque	424
Resultant Joint Torques	427
Levers	430
Anatomical Levers	434
Equations of Static Equilibrium	436
Equations of Dynamic Equilibrium	437
Center of Gravity	440
Locating the Center of Gravity	441
Locating the Human Body Center of Gravity	442
Stability and Balance	445
Summary	449
Introductory Problems	450
Additional Problems	450
Laboratory Experiences	453

14 Angular Kinetics of Human Movement 459

Resistance to Angular Acceleration	460
Moment of Inertia	460

Determining Moment of Inertia	462
Human Body Moment of Inertia	463
Angular Momentum	464
Conservation of Angular Momentum	466
Transfer of Angular Momentum	467
Change in Angular Momentum	470
Angular Analogues of Newton's Laws of Motion	474
Newton's First Law	474
Newton's Second Law	475
Newton's Third Law	475
Centripetal Force	476
Summary	478
Introductory Problems	478
Additional Problems	479
Laboratory Experiences	481

15 Human Movement in a Fluid Medium 485

The Nature of Fluids	486
Relative Motion	486
Laminar versus Turbulent Flow	488
Fluid Properties	488
Buoyancy	489
Characteristics of the Buoyant Force	489
Flotation	489
Flotation of the Human Body	490
Drag	490
Skin Friction	493
Form Drag	494
Wave Drag	498
Lift Force	499
Foil Shape	500
Magnus Effect	503
Propulsion in a Fluid Medium	506
Propulsive Drag Theory	506
Propulsive Lift Theory	507
Vortex Generation	507
Stroke Technique	507
Summary	508
Introductory Problems	508
Additional Problems	509
Laboratory Experiences	511

Appendices

A	Basic Mathematics and Related Skills	517
B	Trigonometric Functions	522
C	Common Units of Measurement	525
D	Anthropometric Parameters for the Human Body	526
	Glossary	528
	Index	536
