

Exercise Physiology

Theory and Application to Fitness and Performance | Sixth Edition

SCOTT K. POWERS
EDWARD T. HOWLEY

McGraw-Hill INTERNATIONAL EDITION

Contents

Preface xi

SECTION 1

Physiology of Exercise 1

Chapter 1 Physiology of Exercise in the United States—Its Past, Its Future	2
European Heritage	3
Harvard Fatigue Laboratory	4
Physical Fitness	5
Physical Education to Exercise Science	7
Graduate Study and Research in the Physiology of Exercise	8
Professional Societies and Research Journals	10
Translation of Exercise Physiology to the Consumer	11

Chapter 2 Control of the Internal Environment 14

Homeostasis: Dynamic Constancy	15
Control Systems of the Body	16
Nature of the Control Systems	17
Negative Feedback	18
Gain of a Control System	18
Examples of Homeostatic Control	18
Regulation of Arterial Blood Pressure	18
Regulation of Blood Glucose	19
Stress Proteins Assist in the Regulation of Cellular Homeostasis	19
Exercise: A Test of Homeostatic Control	21

Chapter 3 Bioenergetics 23

Cell Structure	24
Biological Energy Transformation	25
Cellular Chemical Reactions	25
Oxidation-Reduction Reactions	27
Enzymes	28

Fuels for Exercise 31

Carbohydrates	31
Fats	32
Proteins	32
High-Energy Phosphates	33
Bioenergetics	33
Anaerobic ATP Production	33
Aerobic ATP Production	38
Aerobic ATP Tally	46
Efficiency of Oxidative Phosphorylation	46
Control of Bioenergetics	46
Control of ATP-PC System	47
Control of Glycolysis	47
Control of Krebs Cycle and Electron Transport Chain	48
Interaction Between Aerobic/Anaerobic ATP Production	48

Chapter 4 Exercise Metabolism 52

Energy Requirements at Rest	53
Rest-to-Exercise Transitions	53
Recovery from Exercise: Metabolic Responses	54
Metabolic Responses to Exercise: Influence of Duration and Intensity	57
Short-Term, Intense Exercise	57
Prolonged Exercise	58
Incremental Exercise	58
Estimation of Fuel Utilization During Exercise	61
Factors Governing Fuel Selection	62
Exercise Intensity and Fuel Selection	62
Exercise Duration and Fuel Selection	63
Interaction of Fat/Carbohydrate Metabolism	64
Body Fuel Sources	65

Chapter 5 Hormonal Responses to Exercise 73

Neuroendocrinology	74
Blood Hormone Concentration	75
Hormone-Receptor Interaction	76

Hormones: Regulation and Action 78

- Hypothalamus and the Pituitary Gland 79
- Thyroid Gland 81
- Parathyroid Gland 82
- Adrenal Gland 82
- Pancreas 85
- Testes and Ovaries 86

Hormonal Control of Substrate Mobilization

- During Exercise 92
- Muscle-Glycogen Utilization 92
- Blood Glucose Homeostasis During Exercise 93
- Hormone-Substrate Interaction 100

Chapter 6 Measurement of Work, Power, and Energy Expenditure 106

- Units of Measure 107
 - Metric System 107
 - SI Units 107
- Work and Power Defined 107
 - Work 107
 - Power 108
- Measurement of Work and Power 109
 - Bench Step 109
 - Cycle Ergometer 110
 - Treadmill 110
- Measurement of Energy Expenditure 111
 - Direct Calorimetry 111
 - Indirect Calorimetry 112
- Estimation of Energy Expenditure 112
- Calculation of Exercise Efficiency 115
 - Factors That Influence Exercise Efficiency 115
- Running Economy 117

Chapter 7 The Nervous System: Structure and Control of Movement 120

- General Nervous System Functions 121
- Organization of the Nervous System 121
 - Structure of the Neuron 122
 - Electrical Activity in Neurons 122
- Sensory Information and Reflexes 129
 - Proprioceptors 129
 - Muscle Chemoreceptors 130
 - Reflexes 130
- Somatic Motor Function 131
- Vestibular Apparatus and Equilibrium 132
- Motor Control Functions of the Brain 132
 - Brain Stem 133
 - Cerebrum 133
 - Cerebellum 134
- Motor Functions of the Spinal Cord 134
 - Control of Motor Functions 135
- Autonomic Nervous System 136
- Exercise Enhances Brain Health 137

Chapter 8 Skeletal Muscle: Structure and Function 140

- Structure of Skeletal Muscle 141
- Neuromuscular Junction 143

Muscular Contraction 144

- Overview of the Sliding Filament Model 144
- Energy for Contraction 145
- Regulation of Excitation-Contraction Coupling 145

Fiber Types 149

- Biochemical and Contractile Characteristics of Skeletal Muscle 149
- Characteristics of Individual Fiber Types 152
- Fiber Types and Performance 154

Alterations in Skeletal Muscle Due to Exercise, Inactivity, and Aging 155

- Exercise-Induced Changes in Skeletal Muscles 155
- Muscle Atrophy Due to Inactivity 155
- Age-Related Changes in Skeletal Muscle 157

Muscle Actions 158

Speed of Muscle Action and Relaxation 159

Force Regulation in Muscle 160

Force-Velocity/Power-Velocity

Relationships 161

Receptors in Muscle 163

- Muscle Spindle 163
- Golgi Tendon Organs 164

Chapter 9 Circulatory Responses to Exercise 169

Organization of the Circulatory System 170

- Structure of the Heart 170
- Pulmonary and Systemic Circuits 171

Heart: Myocardium and Cardiac Cycle 171

- Myocardium 171
- Cardiac Cycle 174
- Arterial Blood Pressure 176
- Factors That Influence Arterial Blood Pressure 177
- Electrical Activity of the Heart 178

Cardiac Output 181

- Regulation of the Heart Rate 182
- Regulation of Stroke Volume 183

Hemodynamics 186

- Physical Characteristics of Blood 186
- Relationships Among Pressure, Resistance, and Flow 186
- Sources of Vascular Resistance 187

Changes in Oxygen Delivery to Muscle During Exercise 188

- Changes in Cardiac Output During Exercise 188
- Changes in Arterial-Mixed Venous O₂ Content During Exercise 189
- Redistribution of Blood Flow During Exercise 189
- Regulation of Local Blood Flow During Exercise 190

Circulatory Responses to Exercise 192

- Emotional Influence 192
- Transition from Rest to Exercise 192
- Recovery from Exercise 192
- Incremental Exercise 192
- Arm versus Leg Exercise 193
- Intermittent Exercise 194
- Prolonged Exercise 194

Regulation of Cardiovascular Adjustments to Exercise 195

Chapter 10 Respiration During Exercise 200

- Function of the Lung 201
- Structure of the Respiratory System 201
 - Conducting Zone 202
 - Respiratory Zone 204
- Mechanics of Breathing 204
 - Inspiration 204
 - Expiration 204
 - Airway Resistance 206
- Pulmonary Ventilation 207
- Pulmonary Volumes and Capacities 208
- Diffusion of Gases 210
- Blood Flow to the Lung 211
- Ventilation-Perfusion Relationships 212
- O₂ and CO₂ Transport in Blood 213
 - Hemoglobin and O₂ Transport 213
 - Oxyhemoglobin Dissociation Curve 213
 - O₂ Transport in Muscle 215
 - CO₂ Transport in Blood 215
- Ventilation and Acid-Base Balance 217
- Ventilatory and Blood-Gas Responses to Exercise 217
 - Rest-to-Work Transitions 217
 - Prolonged Exercise in a Hot Environment 217
 - Incremental Exercise 218
- Control of Ventilation 219
 - Ventilatory Regulation at Rest 219
 - Ventilatory Control During Submaximal Exercise 222
 - Ventilatory Control During Heavy Exercise 222
- Do the Lungs Adapt to Exercise Training? 224
- Does the Pulmonary System Limit Maximal Exercise Performance? 224

Chapter 11 Acid-Base Balance During

- Exercise 230**
- Acids, Bases, and pH 231
- Hydrogen Ion Production During Exercise 232
- Importance of Acid-Base Regulation During Exercise 234
- Acid-Base Buffer Systems 234
 - Intracellular Buffers 234
 - Extracellular Buffers 235
- Respiratory Influence on Acid-Base Balance 236
- Regulation of Acid-Base Balance via the Kidneys 236
- Regulation of Acid-Base Balance During Exercise 237

Chapter 12 Temperature Regulation 241

- Overview of Heat Balance During Exercise 242
- Temperature Measurement During Exercise 243
- Overview of Heat Production/Heat Loss 243
 - Heat Production 243

- Heat Loss 244
- Heat Storage in the Body During Exercise 245
- Body's Thermostat—Hypothalamus 247**
 - Shift in the Hypothalamic Thermostat Set Point Due to Fever 248
- Thermal Events During Exercise 249**
- Exercise in the Heat 250**
 - Sweat Rates During Exercise 251
 - Exercise Performance in a Hot Environment 252
 - Gender and Age Differences in Thermoregulation 253
 - Heat Acclimatization 254
 - Loss of Acclimatization 256
- Exercise in a Cold Environment 256**
 - Cold Acclimatization 256

Chapter 13 The Physiology of Training: Effect on $\dot{V}O_2$ Max, Performance, Homeostasis, and Strength 260

- Principles of Training 261**
 - Overload 261
 - Specificity 262
- Research Designs to Study Training 262**
- Endurance Training and $\dot{V}O_2$ Max 262**
 - Training Programs and Changes in $\dot{V}O_2$ Max 263
- $\dot{V}O_2$ Max: Cardiac Output and the Arteriovenous O₂ Difference 264**
 - Stroke Volume 265
 - Arteriovenous O₂ Difference 267
- Detraining and $\dot{V}O_2$ Max 268**
- Endurance Training: Effects on Performance and Homeostasis 269**
 - Biochemical Adaptations and the Oxygen Deficit 271
 - Biochemical Adaptations and the Plasma Glucose Concentration 271
 - Biochemical Adaptations and Blood pH 273
 - Biochemical Adaptations and Lactate Removal 274
- Endurance Training: Links Between Muscle and Systemic Physiology 275**
 - Peripheral Feedback 277
 - Central Command 277
- Physiological Effects of Strength Training 278**
- Physiological Mechanisms Causing Increased Strength 279**
 - Neural Factors 279
 - Muscular Enlargement 280
 - Concurrent Strength and Endurance Training 281

SECTION 2

Physiology of Health and Fitness 287

Chapter 14 Patterns in Health and Disease:

- Epidemiology and Physiology 288**
- Epidemiology 289**

Coronary Heart Disease 291
Physical Inactivity as a Risk Factor 292
Physiology 294
Synthesis 296

Chapter 15 Work Tests to Evaluate Cardiorespiratory Fitness 299

Testing Procedures 300
Screening 300
Resting and Exercise Measures 302
Field Tests for Estimating CRF 302
Maximal Run Tests 302
Walk Tests 304
Canadian Home Fitness Test 304
Graded Exercise Tests: Measurements 305
Heart Rate 305
Blood Pressure 305
ECG 306
Rating of Perceived Exertion 306
Termination Criteria 307
 $\dot{V}O_2$ Max 308
Estimation of $\dot{V}O_2$ Max from Last Work Rate 309
Estimation of $\dot{V}O_2$ Max from Submaximal HR
Response 309
Graded Exercise Test: Protocols 311
Treadmill 312
Cycle Ergometer 313
Step Test 314

Chapter 16 Exercise Prescriptions for Health and Fitness 320

Prescription of Exercise 321
Dose-Response 322
Physical Activity and Health 323
General Guidelines for Improving
Fitness 325
Screening 325
Progression 325
Warm-Up, Stretch, and Cool-Down, Stretch 325
Exercise Prescription for CRF 325
Frequency 326
Duration 326
Intensity 326
Sequence of Physical Activity 329
Walking 329
Jogging 329
Games and Sports 330
Strength and Flexibility Training 331
Environmental Concerns 332

Chapter 17 Exercise for Special Populations 337

Diabetes 338
Exercise and the Diabetic 339
Asthma 342
Diagnosis and Causes 342
Prevention/Relief of Asthma 343
Exercise-Induced Asthma 343

Chronic Obstructive Pulmonary Disease 345
Testing and Training 345
Hypertension 346
Cardiac Rehabilitation 347
Population 347
Testing 348
Exercise Programs 348
Exercise for Older Adults 349
Exercise During Pregnancy 352

Chapter 18 Body Composition and Nutrition for Health 359

Nutritional Goals 360
Standards of Nutrition 362
Classes of Nutrients 363
Water 363
Vitamins 364
Minerals 364
Carbohydrates 368
Fats 372
Protein 373
Meeting the Guidelines and Achieving the
Goals 374
Food Group Plans 374
Evaluating the Diet 375
Body Composition 376
Methods of Assessing Overweight and
Obesity 377
Methods of Measuring Body Composition 378
Two-Component System of Body
Composition 380
Body Fatness for Health and Fitness 383
Obesity and Weight Control 384
Obesity 384
Diet, Exercise, and Weight Control 388
Energy and Nutrient Balance 389
Diet and Weight Control 390
Energy Expenditure and Weight Control 391

SECTION 3

Physiology of Performance 407

Chapter 19 Factors Affecting Performance 408

Sites of Fatigue 409
Central Fatigue 409
Peripheral Fatigue 410
Factors Limiting All-Out Anaerobic
Performances 413
Ultra Short-Term Performances (Less than Ten
Seconds) 413
Short-Term Performances (10 to
180 Seconds) 415
Factors Limiting All-Out Aerobic
Performances 415
Moderate-Length Performances (Three to Twenty
Minutes) 415

Intermediate-Length Performances (Twenty-One to Sixty Minutes)	416
Long-Term Performances (One to Four Hours)	417
Athlete as Machine	418

Chapter 20 Laboratory Assessment of Human Performance 421

Laboratory Assessment of Physical Performance	422
Physiological Testing: Theory and Ethics	422
What the Athlete Gains by Physiological Testing	422
What Physiological Testing Will Not Do	423
Components of Effective Physiological Testing	423
Direct Testing of Maximal Aerobic Power	424
Specificity of Testing	424
Exercise Test Protocol	425
Determination of Peak $\dot{V}O_2$ in Paraplegic Athletes	425
Laboratory Tests to Predict Endurance Performance	426
Use of the Lactate Threshold to Evaluate Performance	426
Measurement of Critical Power	428
Tests to Determine Exercise Economy	429
Estimating Success in Distance Running Using the Lactate Threshold and Running Economy	429
Determination of Anaerobic Power	430
Tests of Ultra Short-Term Maximal Anaerobic Power	431
Tests of Short-Term Anaerobic Power	433
Evaluation of Muscular Strength	434
Criteria for Selection of a Strength-Testing Method	434
Isometric Measurement of Strength	435
Free-Weight Testing of Strength	435
Isokinetic Assessment of Strength	436
Variable-Resistance Measurement of Strength	437

Chapter 21 Training for Performance 441

Training Principles	442
Overload, Specificity, and Reversibility	442
Influence of Gender, Initial Fitness Level, and Genetics	443
Components of a Training Session: Warm-Up, Workout, and Cool Down	444
Training to Improve Aerobic Power	444
Interval Training	445
Long, Slow-Distance Exercise	446
High-Intensity, Continuous Exercise	446
Injuries and Endurance Training	447
Training for Improved Anaerobic Power	447
Training to Improve the ATP-PC System	448
Training to Improve the Glycolytic System	448

Training to Improve Muscular Strength	448
Progressive Resistance Exercise	450
General Strength-Training Principles	450
Free Weights versus Machines	451
Combined Strength- and Endurance-Training Programs	451
Gender Differences in Response to Strength Training	451
Muscle Soreness	453
Training for Improved Flexibility	456
Year-Round Conditioning for Athletes	457
Off-Season Conditioning	457
Preseason Conditioning	457
In-Season Conditioning	457
Common Training Mistakes	458

Chapter 22 Training for the Female Athlete, Children, and Special Populations 463

Factors Important to Women Involved in Vigorous Training	464
Exercise and Menstrual Disorders	464
Training and Menstruation	465
The Female Athlete and Eating Disorders	465
Bone Mineral Disorders and the Female Athlete	466
Training During Pregnancy	466
Risk of Knee Injury in Female Athletes	466
Sports Conditioning for Children	469
Training and the Cardiopulmonary System	469
Training and the Musculoskeletal System	469
Competitive Training for Diabetics	470
Training for Asthmatics	472
Epilepsy and Physical Training	472
Does Exercise Promote Seizures?	473
Risk of Injury Due to Seizures	473

Chapter 23 Nutrition, Body Composition, and Performance 477

Nutrition and Performance	478
Carbohydrate	478
Protein	482
Water and Electrolytes	486
Minerals	489
Vitamins	490
Precompetition Diet	491
Body Composition and Performance	492
Somatotype	492
Body Fatness and Performance	492

Chapter 24 Exercise and the Environment 499

Altitude	500
Atmospheric Pressure	500
Short-Term Anaerobic Performance	500
Long-Term Aerobic Performance	501
Maximal Aerobic Power and Altitude	501
Adaptation to High Altitude	503
Training for Competition at Altitude	504
The Quest for Everest	506

Heat 509

Hyperthermia 509

Cold 512

Environmental Factors 512

Insulating Factors 513

Energy Production 515

Dealing with Hypothermia 516

Air Pollution 516

Particulate Matter 517

Ozone 517

Sulfur Dioxide 517

Carbon Monoxide 517

Chapter 25 Ergogenic Aids 522

Research Design Concerns 523

Dietary Supplements 524

Aerobic Performance 524

Oxygen 524

Blood Doping 527

Anaerobic Performance 529

Blood Buffers 529

Drugs 530

Amphetamines 530

Caffeine 531

Cocaine 534

Nicotine 535

Physical Warm-Up 536

Appendixes

Appendix A Calculation of Oxygen Uptake and Carbon Dioxide Production A-1

Appendix B Estimated Energy Expenditure during Selected Activities A-5

Appendix C PARmed-X Physical Activity Readiness Medical Examination A-17

Appendix D Dietary Reference Intakes: Macronutrients A-18

Appendix E Dietary Reference Intakes: Vitamins and Minerals A-20

Appendix F Dietary Reference Intakes: Estimated Energy Requirements A-24

Appendix G Percent Fat Estimate for Men: Sum of Triceps, Chest, and Subscapula Skinfolts A-25

Appendix H Percent Fat Estimate for Women: Sum of Triceps, Abdomen, and Suprailium Skinfolts A-26

Glossary G-1

Credits C-1
