

Industrial Hygiene Control of Airborne Chemical Hazards

William Popendorf

Taylor & Francis
Taylor & Francis Group

Table of Contents

Chapter 1	An Introduction to Industrial Hygiene Chemical Hazard Control.....	1
I.	An Overview of Industrial Hygiene.....	1
II.	The Spatial Spectrum of Exposure Scenarios.....	3
III.	The IH Paradigm of Control Priorities.....	4
IV.	The Approach, Organization, and Philosophy of this Book.....	8
	References.....	11
Chapter 2	Basic Gas and Vapor Behavior.....	13
I.	Gas and Vapor Definitions.....	13
II.	Vapor Pressure Changes with Liquid Temperature.....	20
III.	IH Uses of Dalton's Law.....	24
IV.	IH Uses of the Ideal Gas Law.....	27
V.	The Effects of <i>T</i> and <i>P</i> on Airborne Concentration.....	29
VI.	The Effects of <i>T</i> and MW on Plume Density.....	34
VII.	Dense Vapors.....	39
	References.....	46
Chapter 3	Basic Aerosol Behavior.....	49
I.	How Aerosols Differ from Gases and Vapors.....	49
II.	Aerosol Definitions.....	52
III.	Particle Diameter Distributions.....	55
IV.	Modeling Particle Behavior.....	58
V.	Stokes and Aerodynamic Diameters.....	64
VI.	Aerosol Diameters and Human Health.....	68
	References.....	74
Chapter 4	Chemical Exposure Control Criteria.....	77
I.	Performance and Specification Standards.....	77
II.	Health Criteria for Chemical Control.....	79
III.	Safety Criteria for Chemical Control.....	82
IV.	Oxygen Deficiency Criteria.....	86
V.	Comparisons among Criteria.....	91
VI.	OSHA Ventilation Standards.....	93
VII.	Open-Surface Tanks.....	96
	Appendix to Chapter 4.....	104
	References.....	107
Chapter 5	Vapor Generation and Behavior.....	109
I.	Mechanisms of Vapor Generation.....	109
II.	Mechanisms of Plume Dispersion.....	113

III. Four Universal Airborne Chemical Exposure Scenarios	116
IV. Four Settings with Vapor Accumulation.....	120
V. Vapors from Incomplete Evaporation with No Ventilation	122
VI. Vapors from Complete Evaporation with No Ventilation.....	123
VII. Differentiating between Complete and Incomplete Evaporation.....	127
VIII. Vapors from Continuous Evaporation with Ventilation.....	129
References.....	139
Chapter 6 Vapor Pressure in Mixtures.....	141
I. Mixtures	142
II. Defining Liquid Mixtures	143
III. Raoult's Law for Ideal Liquid Mixtures.....	146
IV. The Need for an Empirical Adjustment to Raoult's Law	150
V. Methods to Predict an Empirical Adjustment to Raoult's Law	153
VI. Examples of Mixtures.....	156
VII. Henry's Law	158
VIII. Measuring Mixtures Experimentally.....	162
IX. Applying Predictive Methods to Mixtures.....	163
References.....	170
Chapter 7 Changing the Workplace	173
I. The Technologic Dimension of Change	173
II. The Psychologic Dimension of Change.....	175
III. The Economic Dimension of Change	177
IV. Implementing the IH Control Paradigm.....	181
References.....	182
Chapter 8 Source Control Via Substitution.....	185
I. Alternative Technologies.....	186
II. Volatility and Alternative Chemicals.....	189
III. Aqueous Solvents.....	192
IV. Semiaqueous Solvents	195
V. Organic Solvents.....	197
VI. Toxicity versus Volatility.....	198
VII. The Vapor Hazard Ratio	202
VIII. Using VHR and Other Indices in Risk Management	207
References.....	211
Chapter 9 Other Source and Nonventilation Pathway Controls.....	215
I. Concepts	215
II. Some Nonvolatile Chemical Source Controls	216
III. Some Volatile Chemical Source Controls	219
IV. Effects of Modifying Volatile Chemical Source Variables.....	222
V. Work Practices as an Exposure Control.....	227
VI. Automation as an Exposure Control	229
VII. Separation as an Exposure Control	230
VIII. Isolation as an Exposure Control	231
IX. Fundamental Nonventilation Control Equations.....	232
References.....	234

Chapter 10	An Overview of Local Exhaust Ventilation.....	235
I.	Local Exhaust Ventilation Definitions.....	235
II.	Principles of Local Exhaust Ventilation.....	245
III.	The LEV Design Sequence.....	248
	References.....	251
Chapter 11	Ventilation Flow Rates and Pressures.....	253
I.	Applying Conservation of Mass to Ventilation.....	253
II.	Applying Conservation of Energy to Ventilation.....	257
III.	Static Pressures (P and SP).....	260
IV.	Velocity Pressure.....	262
V.	Total Pressure and Pressure Losses.....	267
VI.	Compilation of the Fundamental Ventilation Control Equations.....	272
	Appendix to Chapter 11.....	274
	References.....	277
Chapter 12	Measuring Ventilation Flow Rates.....	279
I.	Qualitative Air Flow Indicators.....	279
II.	Air Velocity and Manometers.....	280
III.	Aerodynamic Velocity Meters.....	283
IV.	Thermodynamic Velocity Meters.....	288
V.	The Boundary Layer.....	292
VI.	Assessing Flow in Ducts.....	295
VII.	Calibrating Anemometers.....	299
	References.....	305
Chapter 13	Designing and Selecting Local Exhaust Hoods.....	307
I.	Local Exhaust Hood Design Principles.....	307
II.	Selecting a Control Velocity.....	312
III.	Using the DallaValle Equation.....	315
IV.	Designing a Slotted Collection Hood.....	320
V.	Designing a Hood Using an ACGIH “VS” Diagram.....	327
VI.	Designing a Hood for an Open Surface Tank.....	335
VII.	Designing a Canopy Hood over an Isothermal Source.....	342
VIII.	Designing a Canopy Hood over a Hot Source.....	345
IX.	Designing a Push–Pull Hood System.....	349
X.	Using an Air Shower.....	354
XI.	Using Commercial and Other Specialty Hoods.....	356
	References.....	366
Chapter 14	Predicting Pressure Losses in Ventilation Systems.....	369
I.	A Primer on Energy and Pressure Losses.....	369
II.	Energy Losses from Hood or Duct Entry.....	373
III.	Selecting a Duct Velocity.....	378
IV.	Selecting the Duct Size and Material.....	380
V.	Energy Losses from Friction in Straight Ducts.....	382

VI.	An Example of Hood Entry and Duct Friction Losses	387
VII.	Turbulence in Duct Fittings.....	393
VIII.	Losses from Elbows.....	395
IX.	Losses from Duct Contractions	400
X.	Losses from Duct Expansions	403
XI.	Comparing Contraction and Expansion Losses	405
XII.	Energy Losses in Branched Duct Systems.....	409
XIII.	The LEV Design Worksheet	414
	References.....	420
Chapter 15 Exhaust Air Cleaners and Stacks.....		421
I.	Air Cleaning Needs and Options.....	421
II.	Air Cleaner Selection Criteria	423
III.	Particulate Aerosol Collectors.....	424
IV.	Aerosol and Gas Collectors.....	430
V.	Gas and Vapor Collectors	431
VI.	Exhaust Stacks and Reentrainment	435
	References.....	441
Chapter 16 Ventilation Fans.....		443
I.	Fans Have Two Pressures.....	443
II.	Fan Performance	446
III.	Matching Fan Performance to System Requirements.....	447
IV.	Some Air Mover Terminology	449
V.	Axial Fans	451
VI.	Centrifugal Fans.....	454
VII.	The Fan Laws.....	460
VIII.	Fan Selection and Installation	461
	References	472
Chapter 17 Ventilation Operating Costs		473
I.	Fan Efficiency and Power Consumption	473
II.	Electricity Costs for Fans	476
III.	Make-Up Air.....	477
IV.	Heating Costs for Make-Up Air.....	479
V.	Cooling Costs for Make-Up Air.....	483
VI.	Energy Conservation	489
	References.....	491
Chapter 18 LEV System Management.....		493
I.	Why Monitor System Performance?.....	493
II.	When to Monitor System Performance.....	494
III.	What, Where, and How to Monitor System Performance.....	495
IV.	LEV Troubleshooting	498
V.	Post-installation LEV Adjustments	503
	Appendix to Chapter 18	508
	References.....	512

Chapter 19	General Ventilation and Transient Conditions.....	513
I.	General Ventilation and Chemical Control.....	513
II.	Components of the Dilution Ventilation Model.....	514
III.	The General Solution to the Dilution Ventilation Model.....	522
IV.	Concentrations during a Transient Increase.....	525
V.	Concentrations during a Transient Decrease.....	529
VI.	Accumulation with No Ventilation.....	533
	References.....	536
Chapter 20	General Ventilation in Steady State Conditions.....	539
I.	The Concentration in Steady State Conditions.....	539
II.	Normal Building Ventilation Requirements.....	541
III.	Methods to Estimate a Contaminant Generation Rate.....	544
IV.	General Ventilation (HVAC) Systems.....	549
V.	Controlling Exposures Via Dilution Ventilation.....	554
VI.	Sources of HVAC and Indoor Air Quality Problems.....	557
	References.....	563
Chapter 21	Administrative Controls and Chemical Personal Protective Equipment.....	565
I.	Administrative Controls.....	565
II.	Personal Protective Equipment.....	569
III.	Basic PPE Program Management.....	571
IV.	Terms and Concepts Regarding Chemical PPE.....	574
V.	Recognizing Dermal Hazards.....	579
VI.	Chemical Protective Gloves.....	580
VII.	Chemical Protective Clothing.....	587
VIII.	Levels of PPE Ensembles.....	590
	Appendix to Chapter 21.....	595
	References.....	601
Chapter 22	Respirator Controls.....	605
I.	Respirator Terms and Concepts.....	605
II.	Different Kinds of Protection Factors.....	620
III.	Variables Affecting Protection Factors.....	626
IV.	Respirator Fit and Seal Testing.....	629
V.	Respiratory Protection Program Requirements.....	632
VI.	A Respirator Selection Protocol.....	641
	Appendix to Chapter 22.....	655
	References.....	659
Appendix A	VHRs for Volatile Chemicals Listed Alphabetically.....	663
Appendix B	VHRs for Volatile Chemicals Listed by Hazard.....	673
Appendix C	AHHD and ACDD Values for Selected U.S. Cities.....	681
Index	689
