Chapter 1	Ceramic Fabrication Processes: An Introductory Overview	1
1.1	Introduction	1
1.2	Ceramic Fabrication Processes	2
1.2.1	Gas-Phase Reactions	2
1.2.1.1	Chemical Vapor Deposition	4
1.2.1.2	Directed Metal Oxidation	7
1.2.1.3	Reaction Bonding	8
1.2.1.4	Silicon Nitride	9
1.2.1.5	Oxides	10
1.2.1.6	Silicon Carbide	11
1.2.2	Liquid Precursor Methods	12
1.2.2.1	Sol-Gel Processing	12
1.2.2.2	Polymer Pyrolysis	15
1.2.2.3	Silicon Carbide	15
1.2.2.4	Silicon Nitride	17
1.2.2.5	Boron Nitride and Boron Carbide	18
1.2.3	Fabrication from Powders	19
1.2.3.1	Melt Casting	19
1.2.3.2	Sintering of Compacted Powders	20
1.3	Production of Polycrystalline Ceramics from Powders: An Overview	21
1.3.1	Powder Synthesis and Powder Characterization	21
1.3.2	Powder Consolidation	22
1.3.3	The Sintering Process	22
1.3.4	Ceramic Microstructures	25
1.4	Case Study in Processing: Fabrication of TiO_2 from Powders	28
1.5	Concluding Remarks	30
	Problems	30
	References	32
Chapter 2	Synthesis of Powders	37
2.1	Introduction	37
2.2	Powder Characteristics	37
2.3	Powder Synthesis Methods	38
2.4	Powder Preparation by Mechanical Methods	39
2.4.1	Comminution	39
2.4.1.1	High Compression Roller Mills	40
2.4.1.2	Jet Mills	41
2.4.1.3	Ball Mills	41
2.4.2	Mechanochemical Synthesis	45
2.5	Powder Synthesis by Chemical Methods	46
2.5.1	Solid-State Reactions	46
2.5.1.1	Decomposition	47
2.5.1.2	Chemical Reaction between Solids	53

2.5.1.3	Reduction	57
2.5.2	Liquid Solutions	58
2.5.2.1	Precipitation from Solution.....	58
2.5.2.2	Evaporation of the Liquid.....	74
2.5.2.3	Gel Route	79
2.5.2.4	Nonaqueous Liquid Reaction.....	81
2.5.3	Vapor-Phase Reactions	81
2.5.3.1	Gas–Solid Reaction.....	82
2.5.3.2	Reaction between a Liquid and a Gas.....	84
2.5.3.3	Reaction between Gases	84
2.6	Special Topic: Synthesis of Nanoscale Ceramic Powders.....	87
2.6.1	Liquid Solution Techniques	87
2.6.2	Vapor-Phase Techniques.....	88
2.7	Concluding Remarks	89
	Problems.....	89
	References	91
Chapter 3	Powder Characterization.....	97
3.1	Introduction.....	97
3.2	Physical Characterization	97
3.2.1	Types of Particles	98
3.2.1.1	Primary Particles	98
3.2.1.2	Agglomerates.....	98
3.2.1.3	Particles	98
3.2.1.4	Granules.....	99
3.2.1.5	Flocs	99
3.2.1.6	Colloids	99
3.2.1.7	Aggregates.....	99
3.2.2	Particle Size and Particle Size Distribution.....	99
3.2.2.1	Definition of Particle Size.....	100
3.2.2.2	Average Particle Size	101
3.2.2.3	Representation of Particle Size Data	102
3.2.3	Particle Shape	106
3.2.4	Measurement of Particle Size and Size Distribution.....	106
3.2.4.1	Microscopy.....	106
3.2.4.2	Sieving.....	107
3.2.4.3	Sedimentation.....	109
3.2.4.4	Electrical Sensing Zone Techniques (the Coulter Counter).....	110
3.2.4.5	Light Scattering.....	111
3.2.4.6	X-Ray Line Broadening.....	113
3.2.5	Surface Area	113
3.2.6	Porosity of Particles	116
3.2.6.1	Gas Adsorption.....	116
3.2.6.2	Mercury Porosimetry	119
3.2.6.3	Pycnometry.....	121
3.3	Chemical Composition	122
3.3.1	Optical Atomic Spectroscopy: Atomic Absorption and Atomic Emission.....	122
3.3.2	X-Ray Fluorescence Spectroscopy.....	124
3.4	Crystal Structure and Phase Composition	125

3.5	Surface Characterization	127
3.5.1	Surface Structure	129
3.5.2	Surface Chemistry	130
3.5.2.1	Auger Electron Spectroscopy (AES)	130
3.5.2.2	X-Ray Photoelectron Spectroscopy (XPS)	132
3.5.2.3	Secondary Ion Mass Spectrometry (SIMS)	133
3.6	Concluding Remarks	136
	Problems	136
	References	138

Chapter 4 Science of Colloidal Processing.....141

4.1	Introduction.....	141
4.2	Types of Colloids	142
4.3	Attractive Surface Forces	142
4.3.1	van der Waals Forces between Atoms and Molecules	142
4.3.2	van der Waals Forces between Macroscopic Bodies.....	144
4.3.3	The Hamaker Constant.....	146
4.3.4	Effect of the Intervening Medium	148
4.4	Stabilization of Colloidal Suspensions	148
4.5	Electrostatic Stabilization.....	149
4.5.1	The Development of Charges on Oxide Particles in Water	149
4.5.1.1	Isomorphic Substitution	150
4.5.1.2	Adsorption of Ions from Solution	150
4.5.2	Origins of the Electrical Double Layer	153
4.5.3	Isolated Double Layer	154
4.5.4	Surface Charge	157
4.5.5	Repulsion between Two Double Layers	158
4.5.6	Stability of Electrostatically Stabilized Colloids	160
4.5.7	Kinetics of Flocculation	161
4.5.8	Electrokinetic Phenomena.....	162
4.5.8.1	Microelectrophoretic Technique	163
4.5.8.2	Significance of the ζ Potential	164
4.6	Steric Stabilization.....	164
4.6.1	Adsorption of Polymers from Solution.....	165
4.6.2	Origins of Steric Stabilization.....	167
4.6.3	Effects of Solvent and Temperature.....	168
4.6.4	Stability of Sterically Stabilized Suspensions	170
4.6.5	Stabilization by Polymers in Free Solution	171
4.7	Electrosteric Stabilization.....	172
4.7.1	Dissociation of Polyelectrolytes in Solution.....	172
4.7.2	Adsorption of Polyelectrolytes from Solution.....	174
4.7.3	Stability of Electrosterically Stabilized Suspensions	175
4.8	Structure of Consolidated Colloids.....	176
4.9	Rheology of Colloidal Suspensions	178
4.9.1	Rheological Properties.....	178
4.9.2	Factors Influencing the Rheology of Colloidal Suspensions	180
4.9.2.1	Influence of Interparticle Forces.....	180
4.9.2.2	Influence of Particle Interactions on the Viscosity.....	183
4.9.2.3	Influence of Particle Characteristics	185
4.10	Concluding Remarks	187

Problems.....	187
References	189

Chapter 5 Sol–Gel Processing.....193

5.1	Introduction.....	193
5.2	Types of Gels.....	194
5.2.1	Particulate Gels.....	194
5.2.2	Polymeric Gels	195
5.3	Sol–Gel Processing of Aqueous Silicates.....	197
5.3.1	Effect of pH.....	198
5.3.1.1	Polymerization in the pH range of 2 to 7	198
5.3.1.2	Polymerization above pH $\approx$ 7	200
5.3.1.3	Polymerization below pH $\approx$ 2.....	200
5.4	Metal Alkoxides.....	201
5.4.1	Preparation of Metal Alkoxides	201
5.4.1.1	Reactions between Metals and Alcohols	201
5.4.1.2	Reactions Involving Metal Chlorides	202
5.4.1.3	Miscellaneous Methods.....	202
5.4.2	Basic Properties	204
5.4.2.1	Physical Properties	204
5.4.2.2	Chemical Properties	205
5.5	Sol–Gel Processing of Silicon Alkoxides	206
5.5.1	Precursors	206
5.5.2	Hydrolysis and Condensation	207
5.5.2.1	Acid-Catalyzed Conditions	208
5.5.2.2	Base-Catalyzed Conditions	209
5.5.3	Polymer Growth	209
5.5.3.1	Polymer Growth Models.....	210
5.5.3.2	Structural Evolution of Sol–Gel Silicates	212
5.5.3.3	Rheological Measurements	212
5.5.4	Gelation.....	215
5.5.5	Aging of Gels	216
5.5.6	Drying of Gels.....	216
5.5.6.1	Conventional Drying	217
5.5.6.2	Supercritical Drying	227
5.5.6.3	Structural Changes during Drying	229
5.5.7	Gel Densification during Sintering	230
5.6	Sol–Gel Preparation Techniques	234
5.6.1	Preparation of Particulate Gels	234
5.6.1.1	Single-Component Gels	234
5.6.1.2	Multicomponent Gels.....	236
5.6.2	Preparation of Polymeric Gels	237
5.6.2.1	Use of Double Alkoxides.....	237
5.6.2.2	Partial Hydrolysis of the Slowest Reacting Alkoxide.....	238
5.6.2.3	Use of a Mixture of Alkoxides and Metal Salts	239
5.6.2.4	Slow Addition of Small Amounts of Water.....	240
5.6.2.5	Matched Hydrolysis Rates	241
5.7	Applications of Sol–Gel Processing	241
5.7.1	Thin Films and Coatings.....	242
5.7.1.1	Dip Coating	242

5.7.1.2	Spin Coating.....	244
5.7.1.3	Structural Evolution in Films	245
5.7.1.4	Applications of Films.....	245
5.7.2	Fibers	245
5.7.3	Monoliths	246
5.7.4	Porous Materials.....	247
5.8	Concluding Remarks	247
	Problems.....	247
	References	249

Chapter 6 Mixing and Packing of Powders.....253

6.1	Introduction.....	253
6.2	Mixing of Particulate Solids	254
6.2.1	Types of Mixtures.....	254
6.2.2	Mixing and Segregation Mechanisms.....	254
6.2.3	Mixture Composition and Quality	257
6.2.3.1	Statistical Methods.....	257
6.2.3.2	Measurement Techniques.....	259
6.2.4	Mixing Technology.....	260
6.3	Packing of Particles.....	262
6.3.1	Regular Packing of Monosized Spheres	263
6.3.2	Random Packing of Particles	264
6.3.2.1	Monosized Particles	265
6.3.2.2	Bimodal Mixtures of Spheres.....	266
6.3.2.3	Binary Mixtures of Nonspherical Particles	269
6.3.2.4	Ternary and Multiple Mixtures.....	270
6.3.2.5	Continuous Particle Size Distributions.....	271
6.4	Concluding Remarks	274
	Problems.....	274
	References	276

Chapter 7 Forming of Ceramics.....279

7.1	Introduction.....	279
7.2	Additives in Ceramic Forming.....	280
7.2.1	Solvents.....	280
7.2.2	Dispersants.....	282
7.2.2.1	Inorganic Acid Salts.....	283
7.2.2.2	Surfactants.....	284
7.2.2.3	Low- to Medium-Molecular-Weight Polymers	286
7.2.3	Binders.....	287
7.2.4	Plasticizers	290
7.2.5	Other Additives.....	292
7.3	Forming of Ceramics.....	292
7.3.1	Dry and Semidry Pressing	292
7.3.1.1	Die Compaction	292
7.3.1.2	Isostatic Compaction.....	301
7.3.2	Casting Methods.....	302
7.3.2.1	Slip Casting	302
7.3.2.2	Pressure Casting.....	306

7.3.2.3	Tape Casting.....	308
7.3.2.4	Gelcasting.....	311
7.3.2.5	Electrophoretic Deposition	313
7.3.3	Plastic-Forming Methods	316
7.3.3.1	Extrusion	317
7.3.3.2	Coextrusion	320
7.3.3.3	Injection Molding.....	320
7.4	Solid Freeform Fabrication	323
7.4.1	Particle-Filled Polymer Methods	324
7.4.1.1	Fused Deposition Modeling.....	324
7.4.1.2	Laminated Object Manufacturing.....	325
7.4.2	Powder Methods.....	325
7.4.2.1	Selective Laser Sintering	325
7.4.2.2	Three-Dimensional Printing.....	326
7.4.3	Suspension Methods.....	326
7.4.3.1	Stereolithography	326
7.4.3.2	Direct Ceramic Ink-Jet Printing.....	327
7.4.3.3	Robocasting.....	328
7.4.3.4	Freeze Casting.....	328
7.5	Concluding Remarks	330
	Problems.....	330
	References	333

Chapter 8 Drying, Debinding, and Microstructural Characterization of Green Bodies.....337

8.1	Introduction.....	337
8.2	Drying of Granular Ceramics.....	338
8.2.1	Drying of Granular Layers.....	338
8.2.2	Drying of Granular Solids.....	340
8.2.2.1	Driving Forces for Shrinkage and Moisture Movement	341
8.2.2.2	Stages of Drying	341
8.2.2.3	Moisture Distribution and Movement.....	347
8.2.2.4	Drying Stresses	348
8.2.2.5	Warping and Cracking	349
8.2.2.6	Drying Technology.....	351
8.3	Binder Removal (Debinding).....	352
8.3.1	Extraction by Capillary Flow.....	352
8.3.2	Solvent Extraction	352
8.3.3	Thermal Debinding.....	353
8.3.3.1	Stages and Mechanisms of Thermal Debinding.....	353
8.3.3.2	Models for Thermal Debinding	354
8.3.3.3	Thermal Debinding in Practice.....	357
8.4	Green Microstructures and Their Characterizations.....	358
8.5	Concluding Remarks	361
	Problems.....	361
	References	362

Chapter 9 Sintering and Microstructure Development.....365

9.1	Introduction.....	365
9.2	Solid-State Sintering.....	366

9.2.1	Driving Force for Sintering	367
9.2.2	Effects of Surface Curvature	369
9.2.2.1	Stress on the Atoms under a Curved Surface	369
9.2.2.2	Chemical Potential of the Atoms under a Curved Surface	370
9.2.2.3	Vacancy Concentration under a Curved Surface	371
9.2.2.4	Vapor Pressure over a Curved Surface	372
9.2.3	Grain Boundary Effects	373
9.2.4	Mechanisms of Sintering	375
9.2.5	Stages of Sintering	377
9.2.6	Sintering Models and Their Predictions	379
9.2.6.1	Analytical Models	379
9.2.6.2	Predictions of the Analytical Models	385
9.2.6.3	Effect of Applied Pressure	387
9.2.6.4	Numerical Simulations of Sintering	387
9.3	Grain Growth and Coarsening	387
9.3.1	Normal Grain Growth	389
9.3.2	Abnormal Grain Growth	394
9.3.3	Ostwald Ripening	395
9.3.4	Control of Grain Growth	398
9.3.4.1	Effect of Dopants: Solute Drag	398
9.3.4.2	Effect of Fine, Inert Second-Phase Particles	401
9.3.5	Grain Growth and Pore Evolution in Porous Compacts	403
9.3.6	Interactions between Pores and Grain Boundaries	406
9.3.6.1	Pore Mobility	406
9.3.6.2	Kinetics of Pore–Boundary Interactions	409
9.3.6.3	Microstructural Maps	410
9.4	Liquid-Phase Sintering	412
9.4.1	Stages of Liquid-Phase Sintering	414
9.4.2	Kinetic and Thermodynamic Factors	416
9.4.2.1	Contact Angle	416
9.4.2.2	Dihedral Angle	418
9.4.2.3	Effects of Gravity	418
9.4.2.4	Grain Boundary Films	419
9.4.2.5	Volume Fraction of Liquid Phase	420
9.4.3	Phase Diagrams in Liquid-Phase Sintering	420
9.5	Sintering Practice	421
9.5.1	Heating Schedules	422
9.5.1.1	Isothermal Sintering	422
9.5.1.2	Constant Heating–Rate Sintering	423
9.5.1.3	Multistage Sintering	423
9.5.1.4	Rate-Controlled Sintering	424
9.5.1.5	Fast Firing	425
9.5.1.6	Microwave Sintering	426
9.5.1.7	Plasma-Assisted Sintering	427
9.5.2	Pressure-Assisted Sintering	428
9.5.2.1	Hot Pressing	428
9.5.2.2	Sinter Forging	430
9.5.2.3	Hot Isostatic Pressing (HIPing)	430
9.5.3	Particle and Green Compact Characteristics	430
9.5.3.1	Particle Size	430
9.5.3.2	Particle Size Distribution	431

9.5.3.3	Particle Shape and Particle Structure	432
9.5.3.4	Particle Packing.....	432
9.5.3.5	Effect of Green Density	434
9.5.4	Chemistry Considerations	435
9.5.4.1	Gases in Pores.....	435
9.5.4.2	Vapor Transport.....	437
9.5.4.3	Volatilization and Decomposition.....	437
9.5.4.4	Oxidation State.....	438
9.5.4.5	Defect Chemistry and Stoichiometry	439
9.6	Concluding Remarks	440
	Problems.....	441
	References	446
Appendix A: Physical Constants		453
Appendix B: SI Units — Names and Symbols		455
Appendix C: Conversion of Units.....		457
Appendix D: Aperture Size of U.S. Standard Wire Mesh Sieves (ASTM E 11:87)		459
Appendix E: Densities and Melting Points of Some Elements, Ceramics, and Minerals.....		461
Index		465
