

# Principles of Proteomics

R.M. Twyman

**ADVANCED TEXT**

# Contents

Abbreviations	ix
Preface	xii
<b>1 From genomics to proteomics</b>	<b>1</b>
1.1 Introduction	1
1.2 The birth of large-scale biology	1
1.3 The genome, transcriptome and proteome	4
1.4 Functional genomics at the DNA and RNA levels	5
1.4.1 <i>Transcriptomics</i>	5
1.4.2 <i>Large-scale mutagenesis</i>	10
1.4.3 <i>RNA interference</i>	11
1.5 The need for proteomics	13
1.6 The scope of proteomics	17
1.6.1 <i>Sequence and structural proteomics</i>	17
1.6.2 <i>Expression proteomics</i>	18
1.6.3 <i>Interaction proteomics</i>	19
1.6.4 <i>Functional proteomics</i>	21
1.7 The challenges of proteomics	21
<b>2 Strategies for protein separation</b>	<b>23</b>
2.1 Introduction	23
2.2 Protein separation in proteomics – general principles	23
2.3 Principles of two-dimensional gel electrophoresis	24
2.3.1 <i>General principles of protein separation by electrophoresis</i>	24
2.3.2 <i>Separation according to charge but not mass – isoelectric focusing</i>	26
2.3.3 <i>Separation according to mass but not charge – SDS-PAGE</i>	28
2.4 Two-dimensional gel electrophoresis in proteomics	30
2.4.1 <i>Limitations of 2DGE in proteomics</i>	30
2.4.2 <i>Improving the resolution of 2DGE</i>	30
2.4.3 <i>Improving the sensitivity of 2DGE</i>	32
2.4.4 <i>The representation of proteins on 2D-gels</i>	34
2.4.5 <i>The automation of 2DGE</i>	34
2.5 Principles of liquid chromatography in proteomics	35
2.5.1 <i>General principles of protein and peptide separation by chromatography</i>	35
2.5.2 <i>Affinity chromatography</i>	37
2.5.3 <i>Ion exchange chromatography</i>	38
2.5.4 <i>Reverse-phase chromatography</i>	39
2.5.5 <i>Size exclusion chromatography</i>	41
2.6 Multidimensional liquid chromatography	42
2.6.1 <i>Comparison of multidimensional liquid chromatography and 2DGE</i>	42
2.6.2 <i>Strategies for multidimensional liquid chromatography in proteomics</i>	42

---

<b>3</b>	<b>Strategies for protein identification</b>	<b>49</b>
3.1	Introduction	49
3.2	Protein identification with antibodies	49
3.3	Determining protein sequences by chemical degradation	50
3.3.1	<i>Complete hydrolysis</i>	50
3.3.2	<i>Protein sequencing by Edman degradation</i>	52
3.3.3	<i>Edman degradation in proteomics</i>	54
3.4	Mass spectrometry in proteomics – basic principles and instrumentation	55
3.4.1	<i>Overview</i>	55
3.4.2	<i>The importance of intact peptide ions</i>	56
3.4.3	<i>Instrumentation</i>	57
3.5	Protein identification using data from mass spectrometry	60
3.5.1	<i>Peptide mapping (peptide mass fingerprinting)</i>	60
3.5.2	<i>Advantages and limitations of peptide mass fingerprinting</i>	62
3.5.3	<i>Fragment ion analysis</i>	63
3.5.4	<i>Determining protein sequences de novo by mass spectrometry</i>	65
<b>4</b>	<b>Strategies for protein quantitation</b>	<b>69</b>
4.1	Introduction	69
4.2	Quantitative proteomics with standard 2D gels	70
4.2.1	<i>Image acquisition from 2D gels</i>	70
4.2.2	<i>Spot detection, quantitation and comparison</i>	73
4.3	Multiplexed proteomics	75
4.3.1	<i>Difference gel electrophoresis</i>	76
4.3.2	<i>Parallel analysis with multiple dyes</i>	77
4.4	Quantitative proteomics with mass spectrometry	78
4.4.1	<i>ICAT reagents</i>	79
4.4.2	<i>Nonselective labeling of peptides after digestion</i>	80
4.4.3	<i>Isotope tagging in vivo</i>	82
4.4.4	<i>Mass-coded abundance tags</i>	83
<b>5</b>	<b>Proteomics and the analysis of protein sequences</b>	<b>85</b>
5.1	Introduction	85
5.2	Protein families and evolutionary relationships	86
5.2.1	<i>Evolutionary relationships between proteins</i>	86
5.2.2	<i>Predicting function from sequence</i>	87
5.3	Basic principles of protein sequence comparison	88
5.3.1	<i>Identity and similarity between protein sequences</i>	88
5.3.2	<i>Substitution score matrices</i>	89
5.3.3	<i>Pairwise similarity searching</i>	92
5.3.4	<i>The significance of sequence alignments</i>	94
5.3.5	<i>Multiple alignments</i>	95
5.4	Finding more distant relationships	96
5.4.1	<i>PSI-BLAST</i>	96
5.4.2	<i>Pattern recognition</i>	98
5.5	Pitfalls of functional annotation by similarity searching	100
5.6	Alternative methods for functional annotation	101

<b>6</b>	<b>Structural proteomics</b>	<b>103</b>
6.1	Introduction	103
6.2	The value of protein structures in proteomics	103
6.2.1	<i>Structure–function concordance</i>	103
6.2.2	<i>Structure–function nonconcordance</i>	106
6.3	Techniques for solving protein structures	111
6.3.1	<i>X-ray crystallography</i>	111
6.3.2	<i>Nuclear magnetic resonance spectroscopy</i>	114
6.3.3	<i>Additional methods for structural analysis</i>	116
6.4	Techniques for modeling protein structures	117
6.4.1	<i>Predicting protein secondary structures from sequence data</i>	117
6.4.2	<i>Tertiary structure prediction by comparative modeling</i>	119
6.4.3	<i>Ab initio prediction methods</i>	120
6.4.4	<i>Fold recognition (threading)</i>	121
6.5	Comparing protein structures	122
6.6	The structural classification of proteins	122
6.7	Structural proteomics: initiatives and results	126
<b>7</b>	<b>Interaction proteomics</b>	<b>131</b>
7.1	Introduction	131
7.2	Principles of protein–protein interaction analysis	134
7.2.1	<i>Genetic methods</i>	134
7.2.2	<i>Bioinformatic methods</i>	137
7.2.3	<i>Affinity-based biochemical methods</i>	140
7.2.4	<i>Physical methods</i>	142
7.3	Library-based methods for the global analysis of binary interactions	145
7.3.1	<i>Standard expression libraries</i>	146
7.3.2	<i>Phage interaction display</i>	146
7.3.3	<i>The yeast two-hybrid system</i>	147
7.4	Interaction proteomics using the yeast two-hybrid system	150
7.4.1	<i>Matrix screening</i>	150
7.4.2	<i>Pooled matrix screening</i>	150
7.4.3	<i>Random library screening</i>	152
7.4.4	<i>Limitations of the yeast two-hybrid system</i>	153
7.5	Systematic complex analysis by mass spectrometry	155
7.6	Protein localization in proteomics	157
7.7	Protein interaction maps	158
7.8	Proteins and small molecules	162
<b>8</b>	<b>Protein modification in proteomics</b>	<b>165</b>
8.1	Introduction	165
8.2	Phosphoproteomics	167
8.2.1	<i>Overview of protein phosphorylation</i>	167
8.2.2	<i>Sample preparation for phosphoprotein analysis</i>	168
8.2.3	<i>Detection of phosphoproteins after protein separation</i>	172
8.2.4	<i>Identification of phosphorylated residues</i>	174
8.2.5	<i>Identification of phosphoproteins and prediction of phosphorylated sites</i>	174
8.2.6	<i>Quantitative phosphoproteomics</i>	180
8.3	Glycoproteomics	182
8.3.1	<i>Glycoproteins</i>	182

8.3.2	<i>The role of glycoproteins in the cell</i>	183
8.3.3	<i>Glycoanalysis</i>	184
8.3.4	<i>Separation and detection of glycoproteins</i>	187
8.3.5	<i>Enrichment of glycoproteins</i>	189
8.3.6	<i>High-throughput identification and characterization of glycoproteins</i>	189
8.4	Ubiquitinomics	190
<b>9</b>	<b>Protein chips and functional proteomics</b>	<b>193</b>
9.1	Introduction	193
9.2	Different types of protein chips	194
9.2.1	<i>Antibody arrays</i>	197
9.2.2	<i>Alternative capture agents</i>	199
9.2.3	<i>Antigen arrays</i>	202
9.2.4	<i>Broad-specificity capture chips</i>	202
9.2.5	<i>Functional protein chips</i>	202
9.3	The manufacture of protein chips	205
9.4	Detecting and quantifying proteins bound to protein chips	208
9.4.1	<i>Methods that require labels</i>	209
9.4.2	<i>Label-free methods</i>	210
9.5	Emerging protein chip technologies	210
9.5.1	<i>Bead and particle arrays in solution</i>	210
9.5.2	<i>Cell and tissue arrays</i>	212
<b>10</b>	<b>Applications of proteomics</b>	<b>217</b>
10.1	Introduction	217
10.2	Medical proteomics – disease diagnosis	217
10.2.1	<i>Biomarkers</i>	217
10.2.2	<i>Biomarker discovery using 2DGE and mass spectrometry</i>	218
10.2.3	<i>Biomarker discovery and pattern profiling using protein chips</i>	224
10.3	Pharmaceutical proteomics – drug development	226
10.3.1	<i>The role of proteomics in target identification</i>	226
10.3.2	<i>Proteomics and target validation</i>	228
10.3.3	<i>Proteomics in the development of lead compounds</i>	229
10.3.4	<i>Proteomics and clinical development</i>	230
10.4	Proteomics and plant biotechnology	231
10.4.1	<i>Proteomics in plant breeding and genetics</i>	231
10.4.2	<i>Proteomics for the analysis of genetically modified plants</i>	233
10.4.3	<i>Proteomics and the analysis of secondary metabolism</i>	234
	Index	237
