About the Authors	xiii

INTRODUCTION XV

PROJECT 1. GENOMIC DNA ISOLATION AND ANALYSIS 2

Project Summary	2
Project Background	2

Module I.1. Mouse Genomic DNA Isolation and Analysis 4

Module Summary	4
Module Background	4
Lab Period I.1.1. Grind the Mouse Tissue in Liquid Nitrogen	5
Lab Period I.1.2. Continue Mouse DNA Isolation	7
Lab Period I.1.3. Drop Dialyze the Mouse Genomic DNA	9
Lab Period I.1.4. Determine the DNA Concentration and Purity by Optical Absorbance and Agarose Gel Electrophoresis	10
Part A. Optical Absorbance	11
Part B. Agarose Gel Electrophoresis	13
Lab Period I.1.5. Restriction Enzyme Digests of Genomic DNA	18
Lab Period I.1.6. Prepare Restriction Enzyme Digests for Agarose Gel Electrophoresis	19
Lab Period I.1.7. Prepare, Load, and Electrophorese the Agarose Gel	20

Module I.2. Southern Blot Experiment to Detect Gene-Specific Sequences in Genomic DNA 22

Module Summary	22
Module Background	22
Lab Period I.2.1. Process the Agarose Gel and Set Up the Genomic Southern Blot Transfer	23
Lab Period I.2.2. Disassemble and Cross-Link/Bake the Genomic Southern Blot	26
Lab Period I.2.3. PCR-Label the 1.4 Kb <i>Rvt</i> Probe	27
Lab Period I.2.4. Evaluate the Fluorescein-Labeled <i>Rvt</i> Probe on an Agarose Gel	28
Lab Period I.2.5. Prehybridize (Block) the Genomic Southern Blot	29
Lab Period I.2.6. Hybridize the <i>Rvt</i> Repeat Probe to the Genomic Southern Blot	30
Lab Period I.2.7. Wash the Genomic Southern Blot and Detect the Labeled Probe	30

Module 1.3. PCR Amplify a Specific Gene from Mouse Genomic DNA and Verify Identity by Southern Blot Analysis 33

Module Summary	33
Module Background	33
Lab Period I.3.1. PCR Amplify the <i>Ttr</i> Gene from Mouse Genomic DNA	34
Lab Period I.3.2. Electrophorese the <i>Ttr</i> PCR Product on an Agarose Gel. Southern Blot Transfer to Confirm the Identity of the PCR Product	36
Lab Period I.3.3. Disassemble and Cross-Link/Bake the PCR Southern Blot	39

Lab Period I.3.4. Prehybridize the PCR Southern Blot	39
Lab Period I.3.5. Hybridize the <i>Ttr</i> Oligonucleotide Probe to the PCR Southern Blot	40
Lab Period I.3.6. Wash the <i>Ttr</i> PCR Southern Blot, Develop, and Analyze the Results	40
Materials and Reagents (per Pair of Students)	43
Study Questions for Project I	45

PROJECT II. GENOMIC CLONING, DNA SEQUENCING, AND BIOINFORMATICS

47

Project Summary	47
Project Background	47
Module II.1. Prepare Mouse Genomic DNA for Cloning; Production and Titering of a Lambda Genomic Library	50
Module Summary	50
Module Background	50
Lab Period II.1.1. EcoRI Restriction Enzyme Digest of the Mouse Genomic DNA	52
Lab Period II.1.2. Agarose Gel Electrophoresis of EcoRI-Digested Mouse Genomic DNA	53
Lab Period II.1.3. Purify the EcoRI-Digested Mouse Genomic DNA by Organic Extraction and Drop Dialysis	54
Part A. Organic Extraction	54
Part B. Drop Dialysis	55
Lab Period II.1.4. Ligate the Digested Genomic DNA to a Lambda (l) Bacteriophage Vector	56
Lab Period II.1.5. Package the Lambda Phage Genomic Library	57
Lab Period II.1.6. Titer the Lambda Phage Genomic Library	58
Lab Period II.1.7. Calculate the Titer of the Lambda Phage Genomic Library	61
Module II.2. Screen a Lambda Phage Library to Detect Clones of a Specific Gene	62
Module Summary	62
Module Background	62
Lab Period II.2.1. Plate the Lambda Phage Genomic Library	63
Lab Period II.2.2. Prepare Plaque Lifts from the Lambda Phage Genomic Library	64
Lab Period II.2.3. PCR Reaction to Nonradioactively Label the Mouse Rvt Gene DNA Probe	67
Lab Period II.2.4. Visualize the Rvt Gene Probe Followed by Prehybridization and Hybridization of the Plaque Lift Filters	68
Part A. Visualize the Rvt Gene Probe on an Agarose Gel	68
Part B. Prehybridization of the Plaque Lift Filters	69
Part C. Hybridization of the Plaque Lift Membrane with the Rvt DNA Probe	70
Lab Period II.2.5. Wash the Plaque Lift Filters and Chemiluminescent Detection of the Hybridized Probe	71
Part A. Wash the Plaque Lift Filters	71
Part B. Detection of Hybridized Probe on the Plaque Lift Membrane	71
Lab Period II.2.6. Align Lumigrams to Plates and Pick Positive Lambda Phage Plaques	74
Module II.3. PCR Subclone into a Plasmid Vector, Propagate in Bacterial Cells, and Prepare Purified Recombinant Plasmid	
DNA	76
Module Summary	76
Module Background	76
Lab Period II.3.1. PCR Amplify the Positive Lambda Phage Insert	77

Lab Period II.3.2. Purify and Characterize the Rvt PCR Product	78
Part A. Purify the PCR Product	78
Part B. Characterize the PCR Product by Agarose Gel Electrophoresis	79
Lab Period II.3.3. Ligate the Rvt PCR Product into the pDrive Plasmid Vector	82
Lab Period II.3.4. Transform the pDrive Plasmid into E. coli Cells	83
Lab Period II.3.5. "Pick" a Recombinant Colony for Plasmid Preparation	85
Lab Period II.3.6. Prepare the pDrive/Rvt Recombinant Plasmid	86
Lab Period II.3.7. Quantify the pDrive/Rvt Plasmid DNA on an Agarose Gel	87
Module II.4. Dideoxy Thermal Cycle DNA Sequencing of a Cloned Gene	89
Module Summary	89
Module Background	89
Lab Period II.4.1. PCR Amplify the Insert from the pDrive/Rvt Plasmid	91
Lab Period II.4.2. Confirm and Quantify the PCR Product	92
Lab Period II.4.3. Dideoxy Thermal Cycle Sequencing Reaction	94
Lab Period II.4.4. Purify and Load the DNA Sequencing Reactions	95
Part A. Spin Column Purify the DNA Sequencing Reactions	95
Part B. Load the "Seq Product" Samples into an Automated DNA Sequencer	96
Module II.5. Bioinformatic Analysis of the DNA Sequence Data	97
Module Summary	97
Module Background	97
Lab Period II.5.1. Preliminary Analysis of the DNA Sequence Data	97
Part A. Quality Assessment of Your DNA Sequence Data	97
Part B. Further Bioinformatic Analysis of the DNA Sequence Data	99
Part C. BLAST Search to Confirm the Source of the DNA Sequence Data	101
Part D. Search for an Open Reading Frame in Your DNA Sequence Data	104
Part E. Perform a Similarity Search between Two Sequences	106
Part F. Electronically Map Restriction Sites in Your Cloned Rvt Sequence	108
Materials and Reagents (per Pair of Students)	110
Study Questions for Project II	112

PROJECT III. GENE EXPRESSION ANALYSIS: RNA ISOLATION, NORTHERN BLOT, AND REVERSE TRANSCRIPTASE-POLYMERASE CHAIN REACTION **114**

Project Summary	114
Project Background	114
Module III.1. Isolation and Analysis of Total RNA from Mouse Liver	117
Module Summary	117
Module Background	117
Lab Period III.1.1. Preparation of Total RNA from Frozen Mouse Liver Tissue	118
Lab Period III.1.2. Fractionation of Poly A+ mRNA from Total RNA	120
Lab Period III.1.3. Recovery of Precipitated RNA Samples	122
Lab Period III.1.4. Electrophoresis and Visualization of RNA on a Denaturing Agarose Gel	123
Module III.2. Northern Blot Experiment to Detect a Specific Gene Transcript	125
Module Summary	125
Module Background	125
Lab Period III.2.1. Processing the Northern Gel and Setting Up the Northern Blot Transfer	126
Lab Period III.2.2. Disassemble the Northern Transfer, UV Cross-Link/Bake the Filter	127

Lab Period III.2.3. Random Priming Reaction to Label Nonradioactively the Ttr DNA Probe	128
Lab Period III.2.4. Stop the Labeling Reaction and Precipitate the Ttr Probe	128
Lab Period III.2.5. Northern Blot Prehybridization	129
Lab Period III.2.6. Northern Blot Hybridization	130
Lab Period III.2.7. Northern Blot Detection of the Hybridization Probe	131

Module III.3. Reverse Transcriptase-Polymerase Chain Reaction (RT-PCR)

Amplification of a Specific Gene Transcript	133
---	-----

Module Summary	133
----------------	-----

Module Background	133
-------------------	-----

Lab Period III.3.1. Set Up the RT-PCR Reaction	134
--	-----

Lab Period III.3.2. Electrophoresis to Visualize the RT-PCR Product on an Agarose Gel	135
---	-----

Materials and Reagents (per Pair of Students)	138
---	-----

Study Questions for Project III	139
---------------------------------	-----

PROJECT IV. cDNA CLONING AND cDNA LIBRARY ANALYSIS 142

Project Summary	142
-----------------	-----

Project Background	142
--------------------	-----

Module IV.1. Construction of a cDNA Library and cDNA Library Analysis 144

Module Summary	144
----------------	-----

Module Background	145
-------------------	-----

Lab Period IV.1.1. First-Strand cDNA Synthesis	148
--	-----

Lab Period IV.1.2. Second-Strand cDNA Synthesis	150
---	-----

Lab Period IV.1.3. Production of Blunt Ends on the Double-Stranded cDNA and Purification of the Double-Stranded cDNA	151
--	-----

Part A. Production of Blunt Ends on the Double-Stranded cDNA	151
--	-----

Part B. Purification of the Double-Stranded cDNA	152
--	-----

Lab Period IV.1.4. Recovery Of Double-Stranded cDNA and Ligation of EcoRI Adaptors	153
--	-----

Part A. Recovery of Double-Stranded cDNA	153
--	-----

Part B. Ligation of EcoRI Adaptors	153
------------------------------------	-----

Lab Period IV.1.5. Kinase the Ends of the cDNA and Digest with XhoI to Generate Unique Ends	155
---	-----

Part A. Kinase the Ends of the cDNA	155
-------------------------------------	-----

Part B. Digest with XhoI to Generate Unique Ends	155
--	-----

Lab Period IV.1.6. Size-Selection, Extraction, and Drop-Dialysis of cDNA	156
--	-----

Part A. Size-Selection of Insert cDNA Molecules	156
---	-----

Part B. Extraction of Size-Selected cDNA	157
--	-----

Part C. Drop Dialysis of Size-Selected Insert cDNA	158
--	-----

Lab Period IV.1.7. Concentration of cDNA and Unidirectional Ligation of cDNA Inserts into the Lambda Phage Vector	159
---	-----

Part A. Concentration of cDNA before Ligation to the Lambda Phage Vector	159
--	-----

Part B. Unidirectional Ligation of cDNA Inserts into the Lambda Phage Vector	159
--	-----

Lab Period IV.1.8. Package the Recombinant Lambda Phage Genomes into Infectious Phage Particles and Plate an Aliquot of the Library to Assess the Titer	161
---	-----

Part A. Package the Recombinant Lambda Genomes into Infectious Phage Particles	161
--	-----

Part B. Plate an Aliquot of the cDNA Library to Assess the Titer	162
--	-----

Lab Period IV.1.9. Calculate the Titer and Percentage of Recombinant Phage in the Lambda cDNA Library	165
---	-----

Module IV.2. Characterization and Screening of a cDNA Library Using the Polymerase Chain Reaction	166
Module Summary	166
Module Background	166
Lab Period IV.2.1. Isolation of Phage from Individual Plaques for Insert Size Analysis	166
Lab Period IV.2.2. Use of PCR to Determine the Average Insert Size in the cDNA Library and to Detect a Specific cDNA Clone in the Library	167
Part A. PCR to Determine the Average Insert Size in the cDNA Library	167
Part B. PCR to Detect a Specific cDNA Clone in the cDNA Library	169
Lab Period IV.2.3. Electrophoretic Analysis of PCR Products to Calculate the Average Library Insert Size and Specifically Detect the <i>Ttr</i> Gene Product	171
Materials and Reagents (per Pair of Students)	174
Study Questions for Project IV	175

APPENDIX I. AVAILABLE KITS AND COMPONENTS **177**

APPENDIX II. GENERAL MOLECULAR BIOLOGY LABORATORY SETUP **178**

General Laboratory Equipment	178
Reagents and Recipes Used in This Manual	184
General Reagents	184
Stock Solutions	185
Agarose Gel Electrophoresis Reagents	186
Plaque Lift Solutions	187
Southern Blot Solutions	187
Southern Blot Wash and Detection Solutions ("Genomic Southern." Module 1.2)	188
Southern Blot Wash and Detection Solutions ("Ttr PCR Southern." Module 1.3)	188
RNA Project (Project III) and Northern Reagents	190
Phototope™ Detection Reagents	191
Bacterial Growth Media	192

APPENDIX III. MARKER MAPS AND SIZES **194**

Lambda DNA–HindIII Digest	194
Lambda DNA–BstEII Digest	195
New England Biolabs 100-bp DNA Ladder	196

APPENDIX IV. ALTERNATE PROTOCOLS **197**

Alternate Protocol AI. Isolation of High Molecular Weight Mouse Genomic DNA (Not Using a "Kit")	197
Lab Period AI.1. Mouse DNA Isolation	197
Lab Period AI.2. Continue Mouse DNA Isolation	198
Lab Period AI.3. Continue Mouse DNA Isolation	200
Lab Period AI.4. Drop Analysis	201

Alternate Protocol AII. Purification of DNA from Agarose Gels Using α -Agarase and Low-Melt Agarose	201
Lab Period AII.1. Agarose Gel Electrophoresis of DNA for Gel Purification	202
Lab Period AII.2. Size Selection and Purification of Electrophoresed DNA	204
Alternate Protocol AIII. An Alternative Preparation of Mammalian Total RNA Using an Ultracentrifuge	207

APPENDIX V. OTHER USEFUL PROTOCOLS AND INFORMATION **208**

AV.1. Pure Culture Technique	208
A. Streak Plate Technique	208
B. Pour Plate Technique	211
AV.2. Guidelines for Successful Ligation Reactions	213
AV.3. Use of DNase to Eliminate DNA Contamination from RT-PCR Reactions	215
AV.4. Alternative Protocol. SYBR Safe DNA Agarose Gel Stain	216
Protocol A. Staining Nucleic Acids after Electrophoresis	216
Protocol B. Precasting SYBR Safe Stain in Agarose Gels	216
AV.5. Using DEPC for RNA Solutions	218
AV.6. Preparation of Phenol for DNA Extractions	218
AV.7. Preparation of Chisam for DNA Extractions	218
AV.8. Preparation of CaCl_2 Competent Cells	218
AV.9. Salt Concentrations for Nucleic Acid Precipitation	219
AV.10. Notes on Ethanol Precipitation of DNA and RNA	219
AV.11. Separation of DNA and Marker Dyes in Agarose and Acrylamide Gels	220
AV.12. Estimating DNA and RNA Concentrations Using Spectrophotometry and Gel Electrophoresis	221
AV.13. Other Useful Molecular Biology Information	222
The Genetic Code	222
Amino Acid Structures	222
DNA Base Pairs	223
Nucleic Acid Data	223
Avoiding Ribonuclease Contamination	225

APPENDIX VI. USEFUL CALCULATIONS **227**

1. Calculations of Picomoles of DNA and DNA Ends	227
2. Calculation of the Melting Point Temperature (T_m)	227
Double-Stranded DNA	227
Double-Stranded RNA	228
DNA-RNA Hybrids	228
Oligonucleotides	228
The "Wallace" Equation	228
3. Choice of Hybridization and Annealing Temperatures Based on T_m	229
4. Molar Ratio Calculations for Ligations	229

APPENDIX VII. REFERENCES, HELPFUL BOOKS, AND ADDITIONAL RESOURCES **230**

Laboratory Manuals	230
Textbooks on Molecular Biology	231
Books on the Human Genome Project	233
Additional Resources	233
Websites for Molecular Biology Protocols	234
