

Second Edition

FUNDAMENTALS OF STRUCTURAL DYNAMICS

Roy R. Craig Jr. • Andrew J. Kurdila

Contents

Preface to Structural Dynamics—An Introduction to Computer Methods	xi	3.3	Stability of Motion	66	
Preface to Fundamentals of Structural Dynamics	xiii	3.4	Free Vibration of an SDOF System with Coulomb Damping	70	
About the Authors	xv	3.5	Experimental Determination of the Natural Frequency and Damping Factor of an SDOF System	72	
1 The Science and Art of Structural Dynamics	1	References	77		
1.1	Introduction to Structural Dynamics	1	Problems	78	
1.2	Modeling of Structural Components and Systems	2	4 Response of SDOF Systems to Harmonic Excitation	81	
1.3	Prototype Spring–Mass Model	7	4.1	Response of Undamped SDOF Systems to Harmonic Excitation	82
1.4	Vibration Testing of Structures	12	4.2	Response of Viscous-Damped SDOF Systems to Harmonic Excitation: Frequency-Response Functions	87
1.5	Scope of the Book	12	4.3	Complex Frequency Response	93
1.6	Computer Simulations; Supplementary Material on the Website	15	4.4	Vibration Isolation: Force Transmissibility and Base Motion	96
References	16	4.5	Vibration Measuring Instruments: Accelerometers and Vibrometers	101	
Problems	16	4.6	Use of Frequency-Response Data to Determine the Natural Frequency and Damping Factor of a Lightly Damped SDOF System	104	
Part I Single-Degree-of-Freedom Systems	19	4.7	Equivalent Viscous Damping	107	
2 Mathematical Models of SDOF Systems	21	4.8	Structural Damping	111	
2.1	Brief Review of the Dynamics of Particles and Rigid Bodies	21	References	112	
2.2	Elements of Lumped-Parameter Models	24	Problems	113	
2.3	Application of Newton’s Laws to Lumped-Parameter Models	27	5 Response of SDOF Systems to Nonperiodic Excitation	117	
2.4	Application of the Principle of Virtual Displacements to Lumped-Parameter Models	34	5.1	Response of a Viscous-Damped SDOF System to an Ideal Step Input	117
2.5	Application of the Principle of Virtual Displacements to Continuous Models: Assumed-Modes Method	41	5.2	Response of Undamped SDOF Systems to Rectangular Pulse and Ramp Loadings	119
References	50	5.3	Response of Undamped SDOF Systems to a Short-Duration Impulse: Unit Impulse Response	123	
Problems	51	5.4	Response of SDOF Systems to General Dynamic Excitation: Convolution Integral Method	125	
3 Free Vibration of SDOF Systems	56	5.5	Response Spectra	128	
3.1	Free Vibration of Undamped SDOF Systems	58			
3.2	Free Vibration of Viscous-Damped SDOF Systems	61			

viii Contents

5.6 System Response by the Laplace Transform Method: System Transfer Function 136
References 142
Problems 143

6 Numerical Evaluation of the Dynamic Response of SDOF Systems 147

6.1 Integration of Second-Order Ordinary Differential Equations 148
6.2 Integration of First-Order Ordinary Differential Equations 159
6.3 Nonlinear SDOF Systems 171
References 181
Problems 182

7 Response of SDOF Systems to Periodic Excitation: Frequency-Domain Analysis 184

7.1 Response to Periodic Excitation: Real Fourier Series 184
7.2 Response to Periodic Excitation: Complex Fourier Series 189
7.3 Response to Nonperiodic Excitation: Fourier Integral 195
7.4 Relationship Between Complex Frequency Response and Unit Impulse Response 199
7.5 Discrete Fourier Transform and Fast Fourier Transform 200
References 205
Problems 205

Part II Multiple-Degree-of-Freedom Systems—Basic Topics 209

8 Mathematical Models of MDOF Systems 211

8.1 Application of Newton's Laws to Lumped-Parameter Models 212
8.2 Introduction to Analytical Dynamics: Hamilton's Principle and Lagrange's Equations 218
8.3 Application of Lagrange's Equations to Lumped-Parameter Models 223
8.4 Application of Lagrange's Equations to Continuous Models: Assumed-Modes Method 228
8.5 Constrained Coordinates and Lagrange Multipliers 238

References 240
Problems 241

9 Vibration of Undamped 2-DOF Systems 248

9.1 Free Vibration of 2-DOF Systems: Natural Frequencies and Mode Shapes 249
9.2 Beat Phenomenon 254
9.3 Additional Examples of Modes and Frequencies of 2-DOF Systems: Assumed-Modes Models 258
9.4 Free Vibration of Systems with Rigid-Body Modes 266
9.5 Introduction to Mode Superposition: Frequency Response of an Undamped 2-DOF System 268
9.6 Undamped Vibration Absorber 272
Reference 275
Problems 275

10 Vibration Properties of MDOF Systems: Modes, Frequencies, and Damping 281

10.1 Some Properties of Natural Frequencies and Natural Modes of Undamped MDOF Systems 282
10.2 Model Reduction: Rayleigh, Rayleigh-Ritz, and Assumed-Modes Methods 298
10.3 Uncoupled Damping in MDOF Systems 302
10.4 Structures with Arbitrary Viscous Damping: Complex Modes 307
10.5 Natural Frequencies and Mode Shapes of Damped Structures with Rigid-Body Modes 316
References 322
Problems 322

11 Dynamic Response of MDOF Systems: Mode-Superposition Method 325

11.1 Mode-Superposition Method: Principal Coordinates 325
11.2 Mode-Superposition Solutions for MDOF Systems with Modal Damping: Frequency-Response Analysis 330
11.3 Mode-Displacement Solution for the Response of MDOF Systems 342

11.4	Mode-Acceleration Solution for the Response of Undamped MDOF Systems	349	14 Introduction to Finite Element Modeling of Structures	417	
11.5	Dynamic Stresses by Mode Superposition	351	14.1	Introduction to the Finite Element Method	418
11.6	Mode Superposition for Undamped Systems with Rigid-Body Modes	353	14.2	Element Stiffness and Mass Matrices and Element Force Vector	419
	References	359	14.3	Transformation of Element Matrices	430
	Problems	360	14.4	Assembly of System Matrices: Direct Stiffness Method	438
Part III	Continuous Systems	365	14.5	Boundary Conditions	445
12	Mathematical Models of Continuous Systems	367	14.6	Constraints: Reduction of Degrees of Freedom	447
12.1	Applications of Newton's Laws: Axial Deformation and Torsion	367	14.7	Systems with Rigid-Body Modes	451
12.2	Application of Newton's Laws: Transverse Vibration of Linearly Elastic Beams (Bernoulli–Euler Beam Theory)	374	14.8	Finite Element Solutions for Natural Frequencies and Mode Shapes	453
12.3	Application of Hamilton's Principle: Torsion of a Rod with Circular Cross Section	379		References	462
12.4	Application of the Extended Hamilton's Principle: Beam Flexure Including Shear Deformation and Rotatory Inertia (Timoshenko Beam Theory)	382		Problems	463
	References	385	15 Numerical Evaluation of Modes and Frequencies of MDOF Systems	469	
	Problems	385	15.1	Introduction to Methods for Solving Algebraic Eigenproblems	469
13	Free Vibration of Continuous Systems	388	15.2	Vector Iteration Methods	471
13.1	Free Axial and Torsional Vibration	388	15.3	Subspace Iteration	480
13.2	Free Transverse Vibration of Bernoulli–Euler Beams	392	15.4	QR Method for Symmetric Eigenproblems	483
13.3	Rayleigh's Method for Approximating the Fundamental Frequency of a Continuous System	398	15.5	Lanczos Eigensolver	489
13.4	Free Transverse Vibration of Beams Including Shear Deformation and Rotatory Inertia	400	15.6	Numerical Case Study	496
13.5	Some Properties of Natural Modes of Continuous Systems	401		References	498
13.6	Free Vibration of Thin Flat Plates	405		Problems	498
	References	409	16 Direct Integration Methods for Dynamic Response of MDOF Systems	500	
	Problems	409	16.1	Damping in MDOF Systems	501
Part IV	Computational Methods in Structural Dynamics	415	16.2	Numerical Integration: Mathematical Framework	504
			16.3	Integration of Second-Order MDOF Systems	510
			16.4	Single-Step Methods and Spectral Stability	516
			16.5	Numerical Case Study	525
				References	527
				Problems	528

17 Component-Mode Synthesis 531

- 17.1 Introduction to Component-Mode Synthesis 532
- 17.2 Component Modes: Normal, Constraint, and Rigid-Body Modes 534
- 17.3 Component Modes: Attachment and Inertia-Relief Attachment Modes 539
- 17.4 Flexibility Matrices and Residual Flexibility 544
- 17.5 Substructure Coupling Procedures 549
- 17.6 Component-Mode Synthesis Methods: Fixed-Interface Methods 557
- 17.7 Component-Mode Synthesis Methods: Free-Interface Methods 559
- 17.8 Brief Introduction to Multilevel Substructuring 564
 - References 571
 - Problems 572

Part V Advanced Topics in Structural Dynamics 577

18 Introduction to Experimental Modal Analysis 579

- 18.1 Introduction 580
- 18.2 Frequency-Response Function Representations 584
- 18.3 Vibration Test Hardware 590
- 18.4 Fourier Transforms, Digital Signal Processing, and Estimation of FRFs 594
- 18.5 Modal Parameter Estimation 604
- 18.6 Mode Shape Estimation and Model Verification 612
 - References 615
 - Problems 616

19 Introduction to Active Structures 617

- 19.1 Introduction to Piezoelectric Materials 617

- 19.2 Constitutive Laws of Linear Piezoelectricity 620
- 19.3 Application of Newton's Laws to Piezostructural Systems 624
- 19.4 Application of Extended Hamilton's Principle to Piezoelectricity 627
- 19.5 Active Truss Models 630
- 19.6 Active Beam Models 637
- 19.7 Active Composite Laminates 641
 - References 646
 - Problems 647

20 Introduction to Earthquake Response of Structures 650

- 20.1 Introduction 650
- 20.2 Response of a SDOF System to Earthquake Excitation: Response Spectra 652
- 20.3 Response of MDOF Systems to Earthquake Excitation 660
- 20.4 Further Considerations 664
 - References 665
 - Problems 666

A Units 667

B Complex Numbers 671

C Elements of Laplace Transforms 674

D Fundamentals of Linear Algebra 682

E Introduction to the Use of MATLAB 697
