

Scientific Protocols for FIRE INVESTIGATION

John J. Lentini

A Volume in the
Protocols in Forensic Science Series

Taylor & Francis
Taylor & Francis Group

Contents

1	Fire and Science.....	1
1.1	Introduction	1
1.2	Argument vs. Experiment	1
1.3	Fire and the Enlightenment	3
1.4	The Scientific Approach to Fire Investigation	9
1.5	Modern Fire Analysis.....	10
1.6	NFPA 921.....	12
1.7	Conclusion	14
	References	14
2	The Chemistry and Physics of Combustion	15
2.1	Fire and Energy.....	15
2.2	Basic Chemistry	23
2.3	States of Matter.....	24
2.4	The Behavior of Gases.....	24
2.5	Stoichiometry and Flammable Limits.....	36
2.6	The Behavior of Liquids.....	37
2.7	The Behavior of Solids	46
2.8	Conclusion	50
	References	51
3	Fire Dynamics.....	53
3.1	Introduction	53
3.2	Ignition	53
3.3	Self-Heating and Spontaneous Ignition.....	54
3.4	Chemical Ignition	56
3.5	Flames	56
3.6	Flammability	57
3.7	Compartment Fires.....	64
3.8	Pattern Development.....	75
3.9	Fire Modeling.....	89
3.10	Conclusion	98
	References	99

4	Fire Investigation Procedures.....	101
4.1	Introduction	101
4.2	Recognize the Need	101
4.3	Presumption of Accidental Cause	102
4.4	Planning the Investigation	103
4.5	The Initial Survey: Safety First	104
4.6	Documentation	104
4.7	Reconstruction	110
4.8	Inventory	111
4.9	Avoiding Spoliation	112
4.10	Evidence Collection and Preservation.....	115
4.11	Origin Determination.....	118
4.12	Hypothesis Development and Testing.....	122
4.13	Reporting Procedure.....	129
4.14	Record Keeping.....	131
4.15	Conclusion	134
	References	135
5	Analysis of Ignitable Liquid Residues	137
5.1	Introduction	137
5.2	Evolution of Separation Techniques.....	139
5.3	Evolution of Analytical Techniques	143
5.4	Evolution of Standard Methods	144
5.5	Isolating the Residue.....	146
5.5.1	Initial Sample Evaluation	146
5.5.2	ILR Isolation Method Selection.....	147
5.5.3	Solvent Selection	149
5.5.4	Internal Standards	150
5.5.5	Advantages and Disadvantages of Isolation Methods.....	150
5.6	Analyzing the Isolated ILR.....	151
5.6.1	Criteria for Identification.....	154
5.6.1.1	Identification of Gasoline.....	160
5.6.1.2	Identification of Distillates.....	169
5.6.1.3	Identifying Other Classes of Products	178
5.6.2	Improving Sensitivity	182
5.6.3	Estimating the Degree of Evaporation.....	188
5.6.4	Identity of Source	191
5.7	Reporting Procedures	193
5.8	Record Keeping.....	194
5.9	Quality Assurance	197
5.10	Conclusion	200
	References	200

6	Evaluation of Ignition Sources.....	203
6.1	Introduction	203
6.2	Joint Examinations of Physical Evidence.....	204
6.3	Appliances and Electrical Components	204
6.3.1	Kitchen Ranges.....	212
6.3.2	Coffee Makers	213
6.3.3	Microwave Ovens.....	216
6.3.4	Deep Fat Fryers.....	216
6.3.5	Space Heating Appliances	217
6.3.6	Water Heaters.....	219
6.3.7	Clothes Dryers	224
6.3.8	Fluorescent Lights.....	230
6.3.9	Recessed Lights	233
6.3.10	Exhaust Fans	235
6.3.11	Service Panels.....	238
6.3.12	Oxygen Enrichment Devices.....	239
6.4	Testing of Ignition Scenarios	243
6.4.1	Spontaneous Ignition Tests.....	249
6.5	Following Up.....	253
6.6	Conclusion	254
	References	254
7	Thirty Fire Scene Scenarios	255
7.1	Introduction	255
7.2	Arson.....	256
7.2.1	Arson Fire #1: The Fictitious Burglar	256
7.2.2	Arson Fire #2: Unexplained Accelerants	265
7.2.3	Arson Fire #3: Unpleasant Neighbors	269
7.2.4	Arson Fire #4: Accidental Causes Eliminated.....	277
7.3	Dryer Fires.....	281
7.3.1	Dryer Fire #1: Misrouted Power Cord	281
7.3.2	Dryer Fire #2: Cross-Threaded Connection	285
7.3.3	Dryer Fire #3: Spliced Power Cord	293
7.3.4	Dryer Fire #4: Internal Power Wire Comes Loose	303
7.4	Electrical Fires.....	311
7.4.1	Electrical Fire #1: Energized Neutral.....	311
7.4.2	Electrical Fire #2: Worn Out Outlet.....	317
7.4.3	Electrical Fire #3: Makeshift Extension Cord	321
7.4.4	Electrical Fire #4: A Failed Transformer	331
7.4.5	Electrical Fire #5: An Overdriven Staple.....	335
7.5	Fluorescent Light Fires	341
7.5.1	Fluorescent Light Fire #1: A Ballast Failure.....	342
7.5.2	Fluorescent Light Fire #2: An Overheated Lamp Holder	347

7.6	Gas Fires	353
7.6.1	Gas Fire #1: A Leak in a CSST Line (and a failure to inspect)	353
7.6.2	Gas Fire #2: A Leak at a New Flare Fitting	359
7.6.3	Gas Fire #3: Overfilled Cylinders	363
7.6.4	Gas Fire #4: New Installation, Open Line	369
7.7	Heater Fires	371
7.7.1	Heater Fire #1: Combustibles on a Floor Furnace	371
7.7.2	Heater Fire #2: Portable Heater Ignites Cardboard	376
7.7.3	Heater Fire #3: Contents Stacked in Front of the Heater	382
7.8	Industrial Fires	388
7.8.1	Industrial Fire #1: Machine Shop Spray Booth	388
7.8.2	Industrial Fire #2: Waste Accumulations on the Roof	395
7.8.3	Industrial Fire #3: A Design Flaw in a Printing Machine	401
7.8.4	Industrial Fire #4: Hydraulic Fluid Fire	405
7.8.5	Industrial Fire #5: Another Chicken Story	409
7.9	Lightning Fires	416
7.9.1	Lightning Fire #1	417
7.9.2	Lightning Fire #2	421
7.10	Water Heaters	425
7.10.1	Water Heater Fire #1	425
7.11	Conclusion	430
	References	430

8 The Mythology of Arson Investigation433

8.1	The Development and Promulgation of Myths	433
8.2	Alligatoring	437
8.3	Crazed Glass	439
8.4	Depth and Location of Char	444
8.5	Lines of Demarcation	445
8.6	Sagged Furniture Springs	451
8.7	Spalling	453
8.8	Fire Load	459
8.9	Low Burning and Holes in the Floor	461
8.10	The Angle of the V	462
8.11	Time and Temperature	465
8.12	Conclusion	467
	References	467

9 Sources of Error in Fire Investigation471

9.1	Introduction	471
9.2	Overlooking Critical Data	473
9.3	Misinterpreting Critical Data	474
9.4	Misinterpreting Irrelevant Data	476
9.5	Ignoring Inconsistent Data	477
9.6	Two-Dimensional Thinking	477

9.7	Poor Communication.....	478
9.8	Faulty Chemistry or Engineering.....	479
9.9	Evaluating Allegations of Arson	480
9.9.1	Is There a Credible Motive?.....	480
9.9.2	Is This Arson Call Based Entirely on the Appearance of the Burned Floor in a Fully Involved Compartment?	481
9.9.3	Is This Arson Call Based on “Low Burning,” OR Crazy Glass, OR Spalling, OR “Shiny Alligatoring,” OR a “Narrow V-Pattern,” OR “Melted/Annealed Metal?”	481
9.9.4	Is This Arson Call Based on an Unconfirmed Canine Alert?.....	481
9.9.5	Is This Arson Call Based on a Fire that “Burned Hotter than Normal” or “Faster than Normal?”	482
9.9.6	Do Neutral Eyewitnesses Place the Origin of the Fire Somewhere Other than Where the Arson Investigator Says It Was Set?	482
9.9.7	Is This the Defendant’s First Contact with the Law?.....	482
9.9.8	Is the Accused Refusing to Plead Guilty Despite an Offer of No Jail Time?.....	482
9.10	Investigations Gone Wrong.....	482
9.10.1	State of Georgia v. Weldon Wayne Carr	483
9.10.1.1	Error Analysis	498
9.10.2	Maynard Clark v. Auto Owners Insurance Company.....	498
9.10.2.1	Error Analysis	503
9.10.3	United States v. Kenneth and Ricky Daniels	503
9.10.3.1	Error Analysis	506
9.10.4	Commonwealth of Pennsylvania v. Louis DiNicola.....	506
9.10.4.1	Error Analysis	508
9.10.5	State of Arizona v. Ray Girdler	508
9.10.5.1	Error Analysis	515
9.10.6	Hanley v. Prudential Insurance	515
9.10.6.1	Error Analysis	520
9.10.7	Howell Business Forms v. Vik Brothers Insurance Group	521
9.10.7.1	Error Analysis	523
9.10.8	Eve and Manson Johnson v. Florida Farm Bureau	523
9.10.8.1	Error Analysis	529
9.10.9	State of Georgia v. John Metcalf and Kimberly Post	529
9.10.9.1	Error Analysis	534
9.10.10	State of North Carolina v. Jermaine Antoine Smith.....	535
9.10.10.1	Error Analysis	537
9.10.11	United States v. Michael Weber	538
9.10.11.1	Error Analysis	541
9.11	Conclusion	541
	References	542

10 The Professional Practice of Fire Investigation545

10.1	Introduction.....	545
10.2	Identifying Your Stakeholders.....	545

10.3	Doing Consistent Work.....	548
10.4	Business Practices	551
10.4.1	Pro Bono Work	553
10.5	Serving as an Expert Witness.....	553
10.5.1	Advocacy.....	555
10.5.2	Discovery	556
10.5.3	Courtroom Testimony.....	559
10.5.3.1	Direct Examination.....	560
10.5.3.2	Cross-Examination.....	562
10.6	Conclusion	564
	References	564
	Index	565
