

A Basic Introduction to Pollutant Fate and Transport

← ————— →
An Integrated Approach with Chemistry, Modeling,
Risk Assessment, and Environmental Legislation

Includes
CD-ROM

Frank M. Dunnivant and Elliot Anders

With the pC-pH Simulator, the Pollutant Fate and Transport Simulator Fate®

CONTENTS

PREFACE xv

To the Instructor xvi

To the Student xvi

To the Environmental Professional xvi

How to Use the Book with Fate® and Associated Software xvii

Acknowledgments xvii

SYMBOLS xix

GLOSSARY xxi

PART I INTRODUCTION

CHAPTER 1 SOURCES AND TYPES OF POLLUTANT, WHY WE NEED MODELING, AND HISTORICAL CONTAMINATION EVENTS

3

- 1.1 Introduction 3
- 1.2 The Need for Modeling of Pollutants in Environmental Media 4
- 1.3 Pollution Versus Contamination; Pollutant Versus Contaminant 5
- 1.4 Pollution Classifications 5
- 1.5 Sources of Pollution 6
- 1.6 Historic Examples of Where Fate and Transport Modeling are Useful 16
 - 1.6.1 Surface Water 16
 - 1.6.2 Groundwater 20
 - 1.6.3 Atmosphere 25
- 1.7 Environmental Laws 26
- References 26

PART II CHEMISTRY OF FATE AND TRANSPORT MODELING

CHAPTER 2 BASIC CHEMICAL PROCESSES IN POLLUTANT FATE AND TRANSPORT MODELING

31

- 2.1 The Liquid Medium: Water and the Water Cycle 31
- 2.2 Unique Properties of Water 33
- 2.3 Concentration Units 39
- 2.4 Chemical Aspects of Environmental Systems 40
 - 2.4.1 pH 40
 - 2.4.2 Activity 40
 - 2.4.3 Solubility 45

viii CONTENTS

2.4.4	Vapor Pressure	59
2.4.5	Henry's Law Constant	60
2.5	Reactions and Equilibrium	61
2.5.1	Acid–base Chemistry	61
2.5.2	Oxidation–Reduction Chemistry	66
2.6	Complexation	73
2.7	Equilibrium Sorption Phenomena	74
2.7.1	Sorption Surfaces	76
2.7.2	Organic Matter	81
2.7.3	Organic Sorbates	82
2.7.4	Partition Coefficients, K_d and K_p	84
2.7.5	Ion Exchange Phenomena for Ionic Pollutants	85
2.8	Transformation/Degradation Reactions	87
2.8.1	Abiotic Chemical Transformations/Degradations	87
2.8.2	Photochemical Transformation/Degradation Reactions	89
2.8.3	Nuclear	92
2.8.4	Biological	92
2.9	Summary	93
	References	95

CHAPTER 3 *QUANTITATIVE ASPECTS OF CHEMISTRY TOWARD MODELING*

97

3.1	Introduction	97
3.2	Calculation of the Free Metal Ion Concentration in Natural Waters	97
3.2.1	Calculating Chemical Equilibria	97
3.2.2	Equilibrium Applied to More Complex Speciation Problems	105
3.3	Methods for Determining K_d and K_p	119
3.4	Kinetics of the Sorption Process	124
3.5	Sorption Isotherms	125
3.5.1	A General Approach	125
3.6	Kinetics of Transformation Reactions	129
3.7	Putting It All Together: Where Chemistry Enters into the Modeling Effort	130
	Case I: A Metal Pollutant	131
	Case II: Hydrophobic Pollutants	131
	References	141

PART III *MODELING*

CHAPTER 4 *AN OVERVIEW OF POLLUTANT FATE AND TRANSPORT MODELING*

145

4.1	Modeling Approaches	145
4.1.1	Algebraic Solutions	145
4.1.2	Modeling Using Differential Equations	146
4.1.3	The General Approach for the Models Used in this Text	152
4.1.4	Numerical Methods of Analysis	152
4.2	The Quality of Modeling Results	154
4.3	What Do You Do with Your Modeling Results?	156
	References	156

CHAPTER 5 FATE AND TRANSPORT CONCEPTS FOR LAKE SYSTEMS

157

- Case Study: Lake Onondaga 157
- 5.1 Introduction 159
- 5.2 Types of lakes and lake-forming events 159
- 5.3 Input Sources 162
- 5.4 Stratification of Lake Systems 165
- 5.5 Important Factors in the Modeling of Lakes: Conceptual Model Development 168
- 5.5.1 Definitions of Terms: 168
- 5.5.2 Detention Times and Effective Mixing Volumes 169
- 5.5.3 Chemical Reactions 170
- 5.5.4 Sedimentation 170
- 5.6 Two Basic Mathematical Models for Lakes 173
- 5.6.1 Continuous (State) Model 173
- 5.6.2 Instantaneous (Pulse) Pollutant Input Model 176
- 5.7 Sensitivity Analysis 180
- 5.8 Limitations of Our Models 181
- 5.9 Remediation 181
- References 186

CHAPTER 6 FATE AND TRANSPORT OF POLLUTANTS IN RIVERS AND STREAMS

187

- Case Study: The Rhine River 187
- 6.1 Introduction 188
- 6.2 Examples of Rivers and Volumetric Flows of Water 188
- 6.3 Input Sources 189
- 6.4 Important Factors in the Modeling of Streams: Conceptualization of Terms 190
- 6.4.1 Definition of Terms 190
- 6.4.2 The Stream Channel 191
- 6.4.3 Mixing and Dispersion in Rivers 191
- 6.4.4 Removal Mechanisms 193
- 6.5 Mathematical Development of Simple Transport Models 197
- 6.5.1 Solution of the Differential Equation for the Instantaneous Input (Pulse) 197
- 6.5.2 Solution of the Differential Equation for the Step Input 200
- 6.6 Sensitivity Analysis 204
- 6.7 Limitations of Our Models 204
- 6.8 Remediation of Polluted Streams Systems 205
- References 209

CHAPTER 7 DISSOLVED OXYGEN SAG CURVES IN STREAMS: THE STREETER-PHELPS EQUATION

211

- Case Study: Any Stream, Anywhere in the World 211
- 7.1 Introduction 212
- 7.2 Basic Input Sources (Wastewater Flow Rates and BOD Levels) 216
- 7.3 Mathematical Development of Model 218
- 7.4 Sensitivity Analysis 224

7.5	Limitations of Our Model	225
7.6	Remediation	225
	References	229

CHAPTER 8 FATE AND TRANSPORT CONCEPTS FOR GROUNDWATER SYSTEMS**231**

	Case Study: The Test Area North Deep Well Injection Site at the Idaho National Environmental and Engineering Laboratory (INEEL)	231
8.1	Introduction	232
8.2	Input Sources	234
8.3	Monitoring Wells	235
8.3.1	Cable Tool Percussion Method	236
8.3.2	Direct Rotary Drill Method	237
8.3.3	Earth Augers	240
8.3.4	Well Casing, Grouting, and Sealing the Well Casing	240
8.3.5	Well Development	242
8.3.6	But How good is our well?	244
8.4	Chemistry Experiments Used to Support Modeling Efforts	244
8.4.1	K_d and K_p Values	246
8.4.2	Relationship Between K and the Groundwater Fate and Transport Equation	246
8.4.3	Column Studies for Evaluating Pollutant Transport in Subsurface Media	247
8.5	Direction of Water Flow (the Three-Point Problem)	251
8.6	Physical Parameters Important in Pollutant Fate and Transport	254
8.6.1	Sources of Dispersion in Geological Media	255
8.6.2	A Case Study: The INEEL Water and Tracer Infiltration Experiment	256
8.6.3	Towards a Universal Estimate Technique for Dispersion	263
8.7	Mathematical Models	265
8.8	Sensitivity Analysis	270
8.9	Limitations of Our Models	270
8.10	Remediation	270
	References	275

CHAPTER 9 FATE AND TRANSPORT CONCEPTS IN ATMOSPHERIC SYSTEMS**277**

	Case Study: The Accident at Union Carbide—Bhopal	277
9.1	Introduction	278
9.2	Input Sources	278
9.3	Important Factors in the Modeling of Atmospheric Pollution: Conceptual Model Development	279
9.3.1	One- Versus Two- Versus Three-Dimensional Models	279
9.3.2	Mixing and Dispersion in Atmospheric Systems	279
9.4	Mathematical Development of Model	284
9.4.1	Step Input (Plume Model) of Pollutant	284
9.4.2	Instantaneous Input (Pulse or Puff Model) of Pollution	289
9.5	Sensitivity Analysis	296

9.6	Limitations of our model	296
9.7	Remediation	296
	References	298

PART IV RISK ASSESSMENT

CHAPTER 10 RISK AND THE CALCULATION OF HEALTH RISK FROM EXPOSURE TO POLLUTANTS

303

10.1	The Concept of Risk	304
10.2	Dose Rates from Various Sources	306
10.2.1	Ingestion of Pollutants from Drinking Water	312
10.2.2	Ingestion of Water While Swimming	314
10.2.3	Dermal Contact with Pollutants in Water While Swimming	314
10.2.4	Ingestion of Pollutants in Soil	315
10.2.5	Intake from Dermal Contact with Pollutants in Soil	315
10.2.6	Inhalation of Airborne (Vapor Phase) Pollutants	316
10.2.7	Ingestion of Contaminated Fish and Shellfish	317
10.2.8	Ingestion of Contaminated Fruits and Vegetables	318
10.2.9	Ingestion of Contaminated Meat, Eggs, and Dairy Products	318
10.3	Health Risk Calculations for Carcinogens	319
10.4	Health Risk Calculations for Noncarcinogens	323
10.5	Bioconcentration Calculations	325
10.6	Putting It All Together: Margin of Error (Uncertainty) of the Entire Estimation Process	327
	References	332

PART V ENVIRONMENTAL LEGISLATION IN THE UNITED STATES AND EUROPE

CHAPTER 11 ENVIRONMENTAL LAWS

337

11.1	Environmental Movements in the United States	337
11.2	The History of the Environmental Protection Agency (U.S. EPA): Administrators	340
11.2.1	Timeline of the U.S. Environmental Movement	337
11.3	Major U.S. Environmental Laws	344
11.3.1	The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)	346
11.3.2	The Air Quality Act, The Clean Air Act, and Amendments	347
11.3.3	The National Environmental Policy Act	351
11.3.4	The Solid Waste Disposal Act, Resource Conservation and Recovery Act (RCRA), and Amendments	354
11.3.5	Occupational Safety and Health Act (OSH Act)	357
11.3.6	The Federal Water Pollution Control Act, the Clean Water Restoration Act, the Safe Drinking Water Act, and Amendments	357
11.3.7	The Toxic Substances Control Act	360
11.3.8	The Comprehensive Environmental Response, Compensation, and Liability Act	361
11.3.9	The Oil Pollution Act	364

- 11.3.10 The Pollution Prevention Act 364
- 11.3.11 The Endangered Species Act of 1966 and Amendments 365
- 11.3.12 Marine Protection, Research, and Sanctuaries Act (MPRSA) of 1972 365
- 11.4 EPA's Record 366
- 11.5 International Agreements/Treaties Involving the United States 374
 - 11.5.1 U.S.–Canada Environmental Agreements 374
 - 11.5.2 Multinational Agreements 375
- 11.6 Environmental Policy in the European Union 378
 - 11.6.1 Brief Introduction to the European Union 378
 - 11.6.2 History of Environmental Policy 378
 - 11.6.3 Economy and the Environment 380
 - 11.6.4 The Union Versus Member States 381
 - 11.6.5 The Making of Environmental Policy 382
 - 11.6.6 Existing Environmental Policy 384
 - 11.6.7 Implementation of Environmental Policy 388
 - 11.6.8 Public and the Environment 390
 - 11.6.9 The Future of Environmental Policy 391
- References 393

PART VI *POLLUTANT CASE STUDIES*

CHAPTER 12 *CASE STUDIES OF SELECTED POLLUTANTS*

399

- 12.1 Mercury 399
 - 12.1.1 Sources 399
 - 12.1.2 Production/Use 400
 - 12.1.3 Fate and Environmental Distribution 400
 - 12.1.4 Health Effects 401
- 12.2 Lead 402
 - 12.2.1 Sources 402
 - 12.2.2 Production/Use 402
 - 12.2.3 Fate 403
 - 12.2.4 Environmental Distribution 403
 - 12.2.5 Health Effects 404
- 12.3 PCBs 406
 - 12.3.1 Sources 406
 - 12.3.2 Production/Use 406
 - 12.3.3 Fate and Environmental Distribution 408
 - 12.3.4 Health Effects 409
- 12.4 DDT 409
 - 12.4.1 Sources 409
 - 12.4.2 Production/Use 410
 - 12.4.3 Fate 410
 - 12.4.4 Environmental Distribution 410
 - 12.4.5 Health Effects 410
- 12.5 Endocrine Disruptors 412
 - 12.5.1 Sources 412
 - 12.5.2 Uses and Points of Contact 412

12.5.3	Fate and Environmental Distribution	413
12.5.4	Health Effects	414
References		416

PART VII *SUPPORTING LABORATORY EXPERIMENTS*

CHAPTER 13	<i>EXPERIMENTS</i>	421
13.1	The Determination of Alkalinity in Water Samples	421
13.2	Total Suspended and Dissolved Solids in Water Samples	424
13.3	The Determination of Hardness in a Water Sample	426
13.4	The Determination of Dissolved Oxygen in Water Using the Winkler Method (Iodometric Titration Method)	429
13.5	The Determination of the Biochemical Oxygen Demand (BOD) of Sewage Influent: BOD ₅ and/or BOD ₂₀	434
13.6	Determination of a Clay–Water Distribution Coefficient for Copper	438
13.7	The Measurement of Dispersion in a Simulated Lake System	442
13.8	The Measurement of Dispersion in a Simulated River System	446
13.9	The Measurement of Dispersion and Sorption in a Simulated Groundwater System	448
13.10	A Field Study of a Stream	453
APPENDIX I	<i>GLOSSARY OF IRIS TERMS</i>	455
APPENDIX II	<i>LIST OF DRINKING WATER CONTAMINANTS AND MCLS</i>	461
APPENDIX III	<i>LIST OF CONTAMINANTS AND THEIR MCLS</i>	463
APPENDIX IV	<i>PERIODIC TABLE OF THE ELEMENTS</i>	475

<i>INDEX</i>		477
