

STATISTICS  
FOR THE  
ENVIRONMENT 3

# Pollution Assessment and Control

Edited by  
Vic Barnett and  
K. Feridun Turkman

**WILEY**

*Publishers Since 1807*

# Contents

<b>Preface</b>	<b>xi</b>
<b>PART I INTRODUCTION</b>	<b>1</b>
<b>1 Statistical Analyses of Pollution Problems</b>	<b>3</b>
<i>V. Barnett</i>	
1.1 Introduction	3
1.2 Towards a classification system	7
1.3 Statistical analyses of pollution—general features	12
1.4 Statistical methods used for pollution studies	13
1.5 Classified analysis of publications on standard studies of pollution (1993–1995)	25
1.6 Conclusions	40
<b>PART II SAMPLING AND MONITORING OF POLLUTION</b>	
<b>2 Sampling and Efficient Data Use for Characterizing Polluted Areas</b>	<b>45</b>
<i>A. Stein</i>	
2.1 Introduction	45
2.2 Theory	46
2.2.1 The best linear predictor and the best linear unbiased predictor	46
2.2.2 Modelling the spatial structure	48
2.2.3 Cross-validation	50
2.3 Interactive sampling	51
2.4 Organoleptic observations	54
2.5 Extrapolation	61
2.6 Conclusions	68
Acknowledgements	69
<b>3 Statistical Models for the Semi-Arid Land-Surface-Atmosphere Program: An Integrated Monitoring Experiment</b>	<b>71</b>
<i>F. Avila</i>	
3.1 Introduction	71
3.2 The SALSA program	73
3.2.1 The San Pedro basin	73

3.2.2	The Semi-Arid Land-Surface-Atmosphere program	73
3.2.3	Statistical modeling for the SALSA program	75
3.3	Model space	76
3.3.1	The functional model	76
3.3.2	The model space	77
3.4	Data space	77
3.4.1	Measurement process	77
3.4.2	Data	79
3.4.3	Randomness in the data model	80
3.5	Prediction/estimation space	81
3.6	Predictor space	81
3.7	Statistical examples	82
3.7.1	Random function model: geostatistics	83
3.7.2	Random function model with random sampling	84
3.7.3	Deterministic function model	88
3.8	Conclusions	85
	Acknowledgements	85
 <b>PART III RADIATION</b>		 <b>87</b>
<b>4</b>	<b>Geostatistical Analysis of Residual Contamination from Nuclear Weapons Testing</b>	<b>89</b>
	<i>P. J. Diggle, L. Harper and S. L. Simon</i>	
4.1	Introduction	89
4.2	Survey design	91
4.2.1	Location of gamma-counting sites on Rongclap Island	91
4.2.2	Gamma spectrometry	92
4.3	Conventional geostatistical analysis	94
4.3.1	Linear prediction for stationary Gaussian spatial processes	94
4.3.2	Geostatistics in practice: transformations and the variogram	96
4.3.3	Log-Gaussian analysis of the Rongclap Island data	99
4.4	An approach to non-Gaussian geostatistics	101
4.4.1	An extended class of spatial process models	101
4.4.2	A Poisson log-linear model	103
4.4.3	Poisson log-linear analysis of the Rongclap Island data	105
4.5	Conclusions	106
	Acknowledgement	107
<b>5</b>	<b>Bayesian Uncertainty Analysis and Radiological Protection</b>	<b>109</b>
	<i>R. Haylock and A. O'Hagan</i>	
5.1	Introduction	109
5.2	The underlying theory of Bayesian uncertainty analysis	111
5.2.1	The Bayesian model	111
5.2.2	Estimating model outputs	112
5.2.3	Estimating the mean of the uncertainty distribution	114
5.2.4	Estimating the variance of the uncertainty distribution	115
5.2.5	Selection of optimum design points	118
5.3	The PU239 internal dosimetry model	119
5.3.1	A classical analysis of the Pu model	122
5.3.2	Bayesian uncertainty analysis of the Pu model	123
5.3.3	Results	125
5.3.4	Discussion	126
	Acknowledgements	128

<b>PART IV</b>	<b>AIR QUALITY</b>	<b>129</b>
<b>6</b>	<b>Constructing Spatial Designs for Monitoring Air Pollution using Subset Regression</b>	<b>131</b>
	<i>D. Nychka, Q. Yang and J.A. Royle</i>	
6.1	Introduction	131
6.2	Random surfaces and subset selection	133
6.2.1	Random field model	133
6.2.2	Properties of the motivating example	134
6.2.3	A pseudo regression problem for a given covariance	134
6.3	Variable selection for linear regression models	135
6.4	Space-filling designs	137
6.5	Comparing designs on regular grids	138
6.5.1	Performance measures	142
6.5.2	Results	145
6.5.3	Random designs	149
6.6	Chicago area ozone monitoring network	150
6.6.1	Subset designs	150
6.6.2	Design performance	150
6.7	Discussion	154
<b>7</b>	<b>Local Polynomial Regression and Its Applications in Environmental Statistics</b>	<b>155</b>
	<i>D. Ruppert</i>	
7.1	Introduction	155
7.2	Local regression	159
7.3	Bandwidth selection	162
7.4	Estimation of conditional variance	165
7.5	Examples	166
7.5.1	Biomonitoring of mercury	166
7.5.2	LIDAR	170
7.5.3	Soil elevation and gradient	170
7.6	Discussion	172
	Acknowledgements	173
<b>8</b>	<b>Statistical Analysis of Trend in Urban Ozone</b>	<b>175</b>
	<i>H. Vaquera-Huerta, J. A. Villasenor and J. Hughes</i>	
8.1	Introduction	175
8.2	Parametric models for the intensity function of an NHPP	176
8.3	Proposed model for the intensity function	176
8.4	A likelihood ratio test for trend	178
8.5	Computations of the maximum likelihood parameter estimates	178
8.6	Non-parametric estimation of the intensity function	179
8.7	Discussion	183
	Appendix	183
<b>9</b>	<b>Forecasting Air Pollution with Casual Probabilistic Networks</b>	<b>185</b>
	<i>L.E. Sucar and J.C Ruiz-Suárez</i>	
9.1	Introduction	185
9.2	Probabilistic networks	187
9.3	Structure learning in casual probabilistic networks	190

9.4 Experimental results	194
9.5 Conclusions and future work	196
<b>PART V WATER QUALITY</b>	<b>199</b>
<b>10 Non-Point-Source Pollution of Surface Waters over a Watershed</b> <i>N. Cressie and J.J. Majure</i>	<b>201</b>
10.1 Introduction	201
10.2 The GIS's role in the computing environment	203
10.2.1 The GIS	204
10.2.2 The original database	206
10.2.3 The derived database	208
10.2.4 Distances between sampling sites	217
10.3 Modelling the large-scale variation	218
10.4 Spatio-temporal analysis of statistical dependence	221
10.5 Conclusions	224
Acknowledgements	224
<b>11 Geostatistics Applied to Hydrology Problems and Tools</b> <i>D. Myers</i>	<b>225</b>
11.1 Introduction	225
11.1.1 Heterogeneity	226
11.1.2 Stochastic modelling	227
11.2 The tools	227
11.2.1 Univariate	227
11.2.2 Multivariate	230
11.3 Simulation	231
11.3.1 Turning Bands Algorithm	231
11.3.2 L-U or Cholesky decomposition	232
11.3.3 Sequential Gaussian simulation	232
11.3.4 Simulated annealing	233
11.4 Parameters	234
11.5 Contaminant concentrations	235
11.6 Sampling design	236
11.7 Model-based vs. design-based analyses	237
11.8 Lingering statistical problems	237
<b>12 Optimal Screening Methods in Detection of Water Contamination</b> <i>M. A. Amaral Turkman and K. F. Turkman</i>	<b>241</b>
12.1 Introduction	241
12.2 Optimal screening of water contamination with fixed number of variables	242
12.2.1 Optimal specification region for the probit model	244
12.3 Sequential screening for water quality	246
Acknowledgements	248
<b>PART VI HEALTH</b>	<b>249</b>
<b>13 Interpolating Air Pollution for Health Impact Assessment</b> <i>J. V. Zidek</i>	<b>251</b>
13.1 Introduction	251
13.2 The errors-in-variables problem	253

13.3	Assessment methods and models	255
13.4	A spatial prediction method	258
13.5	Selected findings from an application	264
13.6	Concluding remarks	267
	Acknowledgements	268

**14 Latencies, Exposures to Environmental Hazards, and Cancer Rates**      269  
*Y. Mao and L. B. MacNeill*

14.1	Introduction	269
14.2	Population mobility	273
14.3	Confounding variables	273
14.4	Brief description of the enhanced cancer surveillance system	273
14.5	Definition of latency	274
14.6	Data requirements for latency estimation	275
14.7	Distribution of ages of addiction to tobacco	279
14.8	Addiction-age-group/death-age-group	280
14.9	Latency distribution	282
14.10	Continuous time models	285

**15 An Investigation of the Effect of Road Traffic Pollution on Asthma, Using Geographical Information Systems**      287  
*M. McCready, S. Patel and K. Rennolls*

15.1	Introduction	287
15.1.1	Environmental epidemiology	287
15.1.2	Asthma	288
15.2	Data and methods	290
15.2.1	National Child Development Study	290
15.2.2	GIS and Bartholomew's Digital Map of Great Britain	290
15.2.3	Data linkage	291
15.2.4	A measure of road traffic related pollution	291
15.3	Epidemiological analysis	294
15.4	Results	296
15.5	Discussion	298
	Acknowledgements	299

**PART VII POLICY AND MANAGEMENT**      301

**16 Statistical Issues in Environmental Monitoring and Assessment of Anthropogenic Pollution**      303  
*L. H. Cox and N. P. Ross*

16.1	Introduction	303
16.2	Statistical issues in environmental monitoring and measurements: the collection of primary environmental data	304
16.2.1	Monitoring	304
16.2.2	Spatial and temporal variability	304
16.3	Environmental indicators	306
16.4	Statistical issues in environmental sampling	306
16.5	Use of environmental models	307
16.6	Use of encountered data	308

16.7	Issues for environmental statistics in decision making and public policy	312
16.7.1	Environmental risk assessment	312
16.7.2	Reporting on the state of the environment	313
16.7.3	Public assess	314
16.8	Summary	316
	Acknowledgements	316
