

Carbon Capture and its Storage

An Integrated
Assessment

Edited by
Simon Shackley
and **Clair Gough**

Contents

<i>List of Figures</i>	<i>ix</i>
<i>List of Tables</i>	<i>xi</i>
<i>Notes on Contributors</i>	<i>xiii</i>
<i>Preface by Malcolm Wicks MP, Minister of State for Energy</i>	<i>xvii</i>
<i>Acknowledgements</i>	<i>xix</i>
<i>List of Abbreviations</i>	<i>xxi</i>
1 Introduction	1
1.1 The Climate Change Problem and the Potential Role of Carbon Dioxide Capture and Storage	1
1.2 Biological Sequestration, Direct Ocean and On-Shore CO ₂ Storage	5
1.3 The Global Context of CCS	6
1.4 An Integrated Assessment of CCS in the UK	8
1.5 Structure of the Book	9
1.6 References	11
2 Underground Storage of Carbon Dioxide	15
2.1 Introduction	15
2.2 Underground Storage Concepts	18
2.3 Safety and Security of CO ₂ Storage	31
2.4 References	36
3 Engineering Feasibility of Carbon Dioxide Capture and Storage	43
3.1 Introduction	43
3.2 Technical Review of Existing CO ₂ Capture Processes	44
3.3 Technical Review of New and Emerging CO ₂ Capture Processes	47
3.4 Alternative Power Station Designs to Improve CO ₂ Capture	52
3.5 Novel Routes to CO ₂ Capture and Utilisation	57
3.6 Cost Functions for CO ₂ Capture Processes	63
3.7 A Whole System Techno-Economic Model of CCS	69
3.8 References	82
4 Geological Carbon Dioxide Storage and the Law	87
4.1 Introduction	87
4.2 Applicable International and European Laws	92
4.3 CO ₂ Storage and Marine Legislation	97
4.4 CO ₂ Storage and Climate Change Legislation	121
4.5 CO ₂ Storage and Environmental Assessment Legislation	124

	4.6 CO ₂ Storage and Habitat Protection Legislation	130
	4.7 Conclusions	135
	4.8 References	137
	Addendum to Chapter 4	139
5	The Public Perception of Carbon Dioxide Capture and Storage in the UK	141
	5.1 Introduction	141
	5.2 Research Objectives and Methodology	142
	5.3 Main Findings of the Survey	145
	5.4 Main Findings of the Citizen Panels	150
	5.5 Summary and Discussion	163
	5.6 Implications for Policy and Research Needs	166
	5.7 References	167
6	A Regional Integrated Assessment of Carbon Dioxide Capture and Storage: North West of England Case Study	171
	6.1 Introduction	171
	6.2 Characterisation of the Rocks Beneath the East Irish Sea	172
	6.3 CO ₂ Storage Potential	175
	6.4 Summary of Geological Assessment of the East Irish Sea	182
	6.5 Multi-Criteria Assessment of Different Energy Futures	182
	6.6 Discussion and Conclusions	202
	6.7 References	205
7	A Regional Integrated Assessment of Carbon Dioxide Capture and Storage: East Midlands, Yorkshire and Humberside Case Study	209
	7.1 Introduction	209
	7.2 Geological Assessment of CO ₂ Storage Potential in the Southern North Sea	210
	7.3 CO ₂ Capture and Storage Scenarios	215
	7.4 Stakeholder Multi Criteria Assessment	224
	7.5 Summary	241
	7.6 References	242
8	The Implementation of Carbon Capture and Storage in the UK and Comparison with Nuclear Power	245
	8.1 Introduction	245
	8.2 Early Opportunities for Deployment of CCS in the UK	246
	8.3 The DTI's 2005 Deployment Study	249
	8.4. Comparison of CCS and Nuclear Power	252
	8.5 Conclusions	276
	8.6 References	278

9	Conclusions and Recommendations	281
9.1	Is CCS Viable from a Geological Perspective?	281
9.2	What is the Capacity for CO ₂ Storage in Geological Reservoirs in the UK?	281
9.3	Changes in the Energy System and in Energy Demand	282
9.4	What are the Risks and Potential Impacts of Leakage?	285
9.5	Is CO ₂ Storage In Geological Reservoirs Legal?	291
9.6	Is CCS Technically and Economically Feasible?	291
9.7	Is CCS Acceptable to the Public?	292
9.8	What Do Stakeholders Think About CCS and How it Compares with the Other Options for Sustainable Energy Futures?	293
9.9	What are the Main Differences Between the Two Case-Study Regions?	293
9.10	Summary of Key Findings	295
9.11	Recommendations to Policy Makers	298
9.12	References	302
