Contents

1	Mathematical Preliminaries	1
1.1	Introduction	1
1.2	Vector Spaces	2
1.2.1	Vector Space Operations	2
1.2.2	Data Fitting	13
1.2.3	Eigenvalues and Eigenvectors	16
1.2.4	Convergence in $\mathbf{R}^n$	21
1.3	Calculus on $\mathbf{R}$ and $\mathbf{R}^n$	23
1.3.1	Calculus for a Function of One Variable	23
1.3.2	Calculus for a Function of Several Variables	28
1.4	Convex Analysis	38
1.4.1	Convex Sets	38
1.4.2	Convex Functions	40
1.5	Exercises	45
	References	48
2	One-Dimensional Optimization	49
2.1	Introduction	49
2.1.1	Function Comparison Methods	49
2.1.2	Polynomial Interpolation Methods	51
2.1.3	Iterative Methods	53
2.2	Function Comparison Methods	55
2.2.1	Case Study 1: Optimization in Semiconductor Manufacturing	55
2.2.2	Two Point Equal Interval Search	56
2.2.3	Method of Bisection	57
2.2.4	Fibonacci Method	60
2.2.5	Golden Section Search	66
2.2.6	Case Study Revisited	68
2.3	Polynomial Interpolation	70
2.3.1	Case Study 2: Loading of a Beam	70
2.3.2	Quadratic Interpolation	72
2.3.3	Cubic Interpolation	79
2.3.4	Case Study Revisited	81

2.4	Iterative Methods	83
2.4.1	Case Study 3: Optimal Design of a Pi-Circuit	83
2.4.2	Newton's Method	86
2.4.3	Secant Method	87
2.4.4	Case Study Revisited	90
2.5	Exercises	92
	References	94
3	Unconstrained Gradient Based Optimization Methods	95
3.1	Introduction	95
3.2	Gradient and Conjugate Gradient Type Algorithms	97
3.2.1	Case Study 1: Nonlinear Regression Analysis of Vapour-Liquid Equilibrium (VLE) Data	97
3.2.2	Method of Steepest Descent	100
3.2.3	Conjugate Gradient Method (Method of Fletcher and Reeves)	109
3.2.4	Case Study Revisited	120
3.3	Newton Type Methods	129
3.3.1	Case Study 2: Rocket Staging	129
3.3.2	Newton's Method	133
3.3.3	Marquardt's Method	138
3.3.4	Case Study Revisited	139
3.4	Quasi Newton Methods	151
3.4.1	Case Study 3: Neural Network Solution of Ordinary Differential Equations	151
3.4.2	Quasi-Newton Algorithms	152
3.4.3	Case Study Revisited	163
3.5	Exercises	172
	References	173
4	Linear Programming	174
4.1	Introduction	174
4.2	Simplex Method	183
4.2.1	Case Study 1: Equipment Bags	183
4.2.2	Movement from One Extreme Point to Another	184
4.2.3	Algorithm	192
4.2.4	Case Study Revisited	196
4.2.5	Revised Simplex Method	198
4.3	Finding Initial Solution	204
4.3.1	Case Study 2: Tirupati Queue	204
4.3.2	Two Phase Simplex Method	206
4.3.3	Case Study Revisited	210
4.4	Duality	214
4.4.1	Case Study 3: Transportation of Rice in Andhra Pradesh	214
4.4.2	Duality Theory	218
4.4.3	Dual Simplex Method	225

4.4.4	Case Study Revisited	230
4.5	Exercises	233
	References	236
5	Constrained Optimization Methods	238
5.1	Introduction	238
5.1.1	Lagrange Multipliers	239
5.1.2	Kuhn-Tucker Conditions	246
5.1.3	Convex Optimization	251
5.2	Transformation Methods	253
5.2.1	Case Study 1: Optimal Production Level	253
5.2.2	Penalty Function Techniques	254
5.2.3	Method of Multipliers	265
5.2.4	Case Study Revisited	268
5.3	Linearization Methods	269
5.3.1	Case Study 2: Relocation of Emergency Unit	269
5.3.2	Linearly Constrained Problems	271
5.3.3	Cutting Plane Method	273
5.3.4	Case Study Revisited	279
5.4	Direction Generation Methods	279
5.4.1	Case Study 3: Data Reconciliation in On-Line Optimization	279
5.4.2	The Method of Feasible Directions	282
5.4.3	The Generalized Reduced Gradient Method	283
5.4.4	Gradient Projection Method	289
5.4.5	Case Study Revisited	294
5.5	Exercises	294
	References	299
6	Evolutionary Algorithms	300
6.1	Box Complex Method	300
6.1.1	Case Study 1: Parameter Tuning in an Air-Water System	300
6.1.2	Box Complex Method	304
6.1.3	Case Study Revisited	306
6.2	Genetic Algorithm	308
6.2.1	Case Study 2: Model Selection for Air-Water System	309
6.2.2	Algorithm	310
6.2.3	Case Study Revisited	314
6.3	Exercises	317
	References	320
