

INTERNATIONAL EDITION

iGenetics

A Molecular Approach

Second Edition

Peter J. Russell

Detailed Contents

Preface *xiii*

CHAPTER 1

Genetics: An Introduction 1

Classical and Modern Genetics 2

Basic Concepts of Genetics 2

DNA, Genes, and Chromosomes 2

Transmission of Genetic Information 3

Expression of Genetic Information 4

Sources of Genetic Variation 5

Geneticists and Genetic Research 5

The Subdisciplines of Genetics 6

Basic and Applied Research 6

Genetic Databases and Maps 7

Organisms for Genetics Research 9

Summary 12

CHAPTER 2

DNA: The Genetic Material 13

The Search for the Genetic Material 14

Griffith's Transformation Experiment 15

Avery's Transformation Experiments 16

The Hershey–Chase Bacteriophage Experiments 16

The Discovery of RNA as Viral Genetic Material 19

The Composition and Structure of DNA and RNA 20

The DNA Double Helix 22

Different DNA Structures 24

DNA in the Cell 26

RNA Structure 26

The Organization of DNA in Chromosomes 27

Viral Chromosomes 27

Prokaryotic Chromosomes 28

Eukaryotic Chromosomes 29

Unique-Sequence and Repetitive-Sequence DNA 36

Summary 37

Analytical Approaches to Solving Genetics Problems 38

Questions and Problems 39

CHAPTER 3

DNA Replication 43

Semiconservative DNA Replication 44

The Meselson–Stahl Experiment 45

Semiconservative DNA Replication in Eukaryotes 47

DNA Polymerases, the DNA Replicating Enzymes 47

DNA Polymerase I 47

Roles of DNA Polymerases 48

Molecular Model of DNA Replication 50

Initiation of Replication 51

Semidiscontinuous DNA Replication 52

Replication of Circular DNA and the Supercoiling Problem 54

Rolling Circle Replication 54

DNA Replication in Eukaryotes 57

Replicons 57

Initiation of Replication 58

Eukaryotic Replication Enzymes 58

Replicating the Ends of Chromosomes 59

Assembling Newly Replicated DNA into Nucleosomes 60

Summary 62

Analytical Approaches to Solving Genetics Problems 62

Questions and Problems 63

CHAPTER 4

Gene Function 67

Gene Control of Enzyme Structure 68

Garrod's Hypothesis of Inborn Errors of Metabolism 68

The One-Gene–One-Enzyme Hypothesis 69

Genetically Based Enzyme Deficiencies in Humans 73

Phenylketonuria 73

Albinism 75

Lesch–Nyhan Syndrome 75

Tay–Sachs Disease 75

Gene Control of Protein Structure 76

Sickle-Cell Anemia 77

Other Hemoglobin Mutants 78

Cystic Fibrosis 79

Genetic Counseling 79

Carrier Detection 80

Fetal Analysis 80

Summary 81**Analytical Approaches to Solving Genetics Problems 82****Questions and Problems 83****CHAPTER 5****Gene Expression: Transcription 87****Gene Expression—The Central Dogma: An Overview 88****The Transcription Process 88**

RNA Synthesis 88

Initiation of Transcription at Promoters 89

Elongation and Termination of an RNA Chain 92

Transcription in Eukaryotes 93

Eukaryotic RNA Polymerases 93

Transcription of Protein-Coding Genes by RNA Polymerase II 93

Eukaryotic mRNAs 95

Transcription of Other Genes 102

Summary 106**Analytical Approaches to Solving Genetics Problems 108****Questions and Problems 108****CHAPTER 6****Gene Expression: Translation 111****Proteins 112**

Chemical Structure of Proteins 112

Molecular Structure of Proteins 112

The Nature of the Genetic Code 115

The Genetic Code Is a Triplet Code 115

Deciphering the Genetic Code 117

Characteristics of the Genetic Code 118

Translation: The Process of Protein Synthesis 119

The mRNA Codon Recognizes the tRNA Anticodon 119

Adding an Amino Acid to tRNA 119

Initiation of Translation 120

Elongation of the Polypeptide Chain 123

Termination of Translation 126

Protein Sorting in the Cell 127**Summary 128****Analytical Approaches to Solving Genetics Problems 128****Questions and Problems 129****CHAPTER 7****DNA Mutation, DNA Repair, and Transposable Elements 133****DNA Mutation 134**

Adaptation versus Mutation 134

Mutations Defined 136

Spontaneous and Induced Mutations 140

Detecting Mutations 148

Repair of DNA Damage 149

Direct Reversal of DNA Damage 150

Base Excision Repair 150

Repair Involving Excision of Nucleotides 150

Human Genetic Diseases Resulting from DNA Replication and Repair Mutations 153

Transposable Elements 153

General Features of Transposable Elements 153

Transposable Elements in Prokaryotes 155

Transposable Elements in Eukaryotes 157

Summary 165**Analytical Approaches to Solving Genetics Problems 166****Questions and Problems 168****CHAPTER 8****Recombinant DNA Technology 175****DNA Cloning 176**

Restriction Enzymes 176

Cloning Vectors and DNA Cloning 179

Recombinant DNA Libraries 183

Genomic Libraries 184

Chromosome Libraries 185

cDNA Libraries 185

Finding a Specific Clone in a DNA Library 187

Screening a cDNA Library 187

Screening a Genomic Library 189

Identifying Genes in Libraries by Complementation of Mutations 190

Using Heterologous Probes to Identify Specific DNA Sequences in Libraries 190

Using Oligonucleotide Probes to Identify Genes or cDNAs in Libraries 190

Molecular Analysis of Cloned DNA 192

Restriction Mapping 192
 Southern Blot Analysis of Sequences
 in the Genome 195
 Northern Blot Analysis of RNA 197

DNA Sequencing 197**The Polymerase Chain Reaction (PCR) 200**

PCR Steps 200
 Advantages and Limitations of PCR 202
 Applications of PCR 202
 RT-PCR and mRNA Quantification 203

Summary 203**Analytical Approaches to Solving Genetics Problems 204****Questions and Problems 204****CHAPTER 9****Applications of Recombinant DNA Technology 211****Site-Specific Mutagenesis of DNA 212****Analysis of DNA Polymorphisms in Genomes 213**

DNA Polymorphism Defined 213
 Classes of DNA Polymorphisms 214

DNA Molecular Testing for Human Genetic Disease Mutations 218

Concept of DNA Molecular Testing 218
 Purposes of Human Genetic Testing 219
 Examples of DNA Molecular Testing 219
 Availability of DNA Molecular Testing 222

Isolation of Human Genes 222

Cloning the Cystic Fibrosis Gene 222

DNA Typing 224

DNA Typing in a Paternity Case 224
 Crime Scene Investigation: DNA Forensics 225
 Other Applications of DNA Typing 227

Analysis of Expression of Individual Genes 228

Regulation of Transcription: Glucose Repression
 of the Yeast *GAL1* Gene 228
 Alternative Pre-mRNA Splicing: A Role in Sexual
 Behavior in *Drosophila* 228

Analysis of Protein-Protein Interactions 229**Gene Therapy 231****Biotechnology: Commercial Products 232****Genetic Engineering of Plants 233**

Transformation of Plant Cells 233
 Applications to Plant Genetic Engineering 234

Summary 236**Analytical Approaches to Solving Genetics Problems 236****Questions and Problems 238****CHAPTER 10****Genomics 243****Structural Genomics 245**

Sequencing Genomes 245
 Whole-Genome Shotgun Sequencing
 of Genomes 249
 Selected Examples of Genomes Sequenced 251
 Bacterial Genomes 251
 Eukaryotic Genomes 252
 Insights from Genome Analysis: Genome Sizes
 and Gene Densities 255

Functional Genomics 257

Identifying Genes in DNA Sequences 258
 Sequence Similarity Searches to Assign
 Gene Function 258
 Assigning Gene Function Experimentally 259
 Describing Patterns of Gene Expression 260

Comparative Genomics 264**Ethics and the Human Genome Project 264****Summary 265****Analytical Approaches to Solving Genetics Problems 266****Questions and Problems 266****CHAPTER 11****Mendelian Genetics 271****Genotype and Phenotype 272****Mendel's Experimental Design 272****Monohybrid Crosses and Mendel's Principle of Segregation 275**

The Principle of Segregation 278
 Representing Crosses with a Branch Diagram 278
 Confirming the Principle of Segregation: The Use
 of Testcrosses 279
 The Wrinkled-Pea Phenotype 280

Dihybrid Crosses and Mendel's Principle of Independent Assortment 282

The Principle of Independent Assortment 282
 Branch Diagram of Dihybrid Crosses 284
 Trihybrid Crosses 285

The "Rediscovery" of Mendel's Principles 286**Statistical Analysis of Genetic Data: The Chi-Square Test 286****Mendelian Genetics in Humans 288**

Pedigree Analysis 288
 Examples of Human Genetic Traits 289

Summary 291**Analytical Approaches to Solving Genetics Problems 291****Questions and Problems 293**

CHAPTER 12

- Chromosomal Basis of Inheritance** 299
- Chromosomes and Cellular Reproduction** 300
 - Eukaryotic Chromosomes 300
 - Mitosis 302
 - Meiosis 306
- Chromosome Theory of Inheritance** 312
 - Sex Chromosomes 312
 - Sex Linkage 314
 - Nondisjunction of X Chromosomes 317
- Sex Chromosomes and Sex Determination** 320
 - Genotypic Sex Determination 320
 - Genic Sex Determination 326
- Analysis of Sex-Linked Traits in Humans** 326
 - X-Linked Recessive Inheritance 327
 - X-Linked Dominant Inheritance 327
 - Y-Linked Inheritance 327
- Summary** 329
- Analytical Approaches to Solving Genetics Problems** 330
- Questions and Problems** 331

CHAPTER 13

- Extensions of Mendelian Genetic Principles** 339
- Determining the Number of Genes for Mutations with the Same Phenotype** 340
- Multiple Alleles** 341
 - ABO Blood Groups 341
 - Drosophila* Eye Color 344
 - Relating Multiple Alleles to Molecular Genetics 344
- Modifications of Dominance Relationships** 346
 - Incomplete Dominance 346
 - Codominance 346
 - Molecular Explanations of Incomplete Dominance and Codominance 347
- Gene Interactions and Modified Mendelian Ratios** 348
 - Gene Interactions That Produce New Phenotypes 348
 - Epistasis 349
- Essential Genes and Lethal Alleles** 356
- Gene Expression and the Environment** 357
 - Penetrance and Expressivity 358
 - Effects of the Environment 359
 - Nature versus Nurture 362
- Summary** 363
- Analytical Approaches to Solving Genetics Problems** 364
- Questions and Problems** 366

CHAPTER 14

- Quantitative Genetics** 373
- The Nature of Continuous Traits** 374
 - Questions Studied in Quantitative Genetics 375
- The Inheritance of Continuous Traits** 375
 - Polygene Hypothesis for Quantitative Inheritance 375
 - Polygene Hypothesis for Wheat Kernel Color 375
- Statistical Tools** 377
 - Samples and Populations 377
 - Distributions 377
 - The Mean 378
 - The Variance and the Standard Deviation 378
 - Correlation 380
 - Regression 381
 - Analysis of Variance 382
- Quantitative Genetic Analysis** 383
 - Inheritance of Ear Length in Corn 383
- Heritability** 385
 - Components of the Phenotypic Variance 385
 - Broad-Sense and Narrow-Sense Heritability 387
 - Understanding Heritability 388
 - How Heritability Is Calculated 389
- Response to Selection** 390
 - Estimating the Response to Selection 390
 - Genetic Correlations 392
- Quantitative Trait Loci** 394
- Summary** 397
- Analytical Approaches to Solving Genetics Problems** 398
- Questions and Problems** 400

CHAPTER 15

- Gene Mapping in Eukaryotes** 405
- Early Studies of Genetic Linkage: Morgan's Experiments with *Drosophila*** 406
- Gene Recombination and the Role of Chromosomal Exchange** 408
 - Corn Experiments 408
 - Drosophila* Experiments 408
- Constructing Genetic Maps** 412
 - Detecting Linkage through Testcrosses 412
 - Gene Mapping with Two-Point Testcrosses 414
 - Generating a Genetic Map 414
 - Gene Mapping with Three-Point Testcrosses 415
 - Calculating Accurate Map Distances 420
- Summary** 421
- Analytical Approaches to Solving Genetics Problems** 421
- Questions and Problems** 423

CHAPTER 16**Advanced Gene Mapping in Eukaryotes 429****Tetrad Analysis in Certain Haploid Eukaryotes 430**

Using Random-Spore Analysis to Map Genes in Haploid Eukaryotes 431

Calculating Gene–Centromere Distance in Organisms by Using Ordered Tetrads 431

Using Tetrad Analysis to Map Two Linked Genes 433

Mitotic Recombination 436

Discovery of Mitotic Recombination 436

Mitotic Recombination in the Fungus *Apergillus nidulans* 438

Retinoblastoma, a Human Tumor That Can Be Caused by Mitotic Recombination 442

Mapping Human Genes 443

Mapping Human Genes by Recombination Analysis 443

lod Score Method for Analyzing Linkage of Human Genes 444

High-Density Genetic Maps of the Human Genome 444

Physical Mapping of Human Genes 445

Summary 446**Analytical Approaches to Solving Genetics Problems 446****Questions and Problems 448****CHAPTER 17****Variations in Chromosome Structure and Number 453****Types of Chromosomal Mutations 454****Variations in Chromosome Structure 454**

Deletion 455

Duplication 457

Inversion 459

Translocation 460

Chromosomal Mutations and Human Tumors 462

Position Effect 465

Fragile Sites and Fragile X Syndrome 465

Variations in Chromosome Number 466

Changes in One or a Few Chromosomes 467

Changes in Complete Sets of Chromosomes 472

Summary 474**Analytical Approaches to Solving Genetics Problems 474****Questions and Problems 475****CHAPTER 18****Genetics of Bacteria and Bacteriophages 481****Genetic Analysis of Bacteria 482****Gene Mapping in Bacteria by Conjugation 484**Discovery of Conjugation in *E. coli* 484The Sex Factor *F* 484High-Frequency Recombination Strains of *E. coli* 485*F'* Factors 487

Using Conjugation to Map Bacterial Genes 487

Circularity of the *E. coli* Map 489**Genetic Mapping in Bacteria by Transformation 490****Genetic Mapping in Bacteria by Transduction 492**

Bacteriophages 492

Transduction Mapping of Bacterial Chromosomes 493

Mapping Bacteriophage Genes 498**Fine-Structure Analysis of a Bacteriophage Gene 499**Recombination Analysis of *rII* Mutants 500

Deletion Mapping 501

Defining Genes by Complementation (*Cis-Trans*) Tests 503**Summary 506****Analytical Approaches to Solving Genetics Problems 506****Questions and Problems 508****CHAPTER 19****Regulation of Gene Expression in Bacteria and Bacteriophages 515****The *lac* Operon of *E. coli* 516**Lactose as a Carbon Source for *E. coli* 516Experimental Evidence for the Regulation of *lac* Genes 517Jacob and Monod's Operon Model for the Regulation of *lac* Genes 520Positive Control of the *lac* Operon 525Molecular Details of *lac* Operon Regulation 526**The *trp* Operon of *E. coli* 528**

Gene Organization of the Tryptophan Biosynthesis Genes 529

Regulation of the *trp* Operon 529**Regulation of Gene Expression in Phage Lambda 533**

Early Transcription Events 533

The Lysogenic Pathway 534

The Lytic Pathway 534

Summary 536**Analytical Approaches to Solving Genetics Problems 537****Questions and Problems 538**

CHAPTER 20

Regulation of Gene Expression in Eukaryotes 543

Operons in Eukaryotes 544

Levels of Control of Gene Expression in Eukaryotes 546

Control of Transcription Initiation 546

Chromatin Remodeling 547

Activation of Transcription by Activators and Coactivators 549

Blocking Transcription with Repressors 550

Combinatorial Gene Regulation 550

Case Study: Regulation of Galactose Utilization in Yeast 551

Regulation of Gene Expression by Steroid Hormones 553

Gene Silencing and Genomic Imprinting 557

Posttranscriptional Control 561

RNA Processing Control 561

mRNA Transport Control 563

mRNA Translation Control 563

mRNA Degradation Control 564

Protein Degradation Control 564

RNA Interference: A Mechanism for Silencing Gene Expression 565

Summary 567

Analytical Approaches to Solving Genetics Problems 568

Questions and Problems 568

CHAPTER 21

Genetic Analysis of Development 573

Basic Events of Development 574

Model Organisms for the Genetic Analysis of Development 575

Development Results from Differential Gene Expression 577

Constancy of DNA in the Genome During Development 577

Examples of Differential Gene Activity During Development 579

Exception to the Constancy of Genomic DNA During Development: DNA Loss in Antibody-Producing Cells 581

Case Study: Sex Determination and Dosage Compensation in Mammals and *Drosophila* 585

Sex Determination in Mammals 585

Dosage Compensation Mechanism for X-Linked Genes in Mammals 586

Sex Determination in *Drosophila* 586

Dosage Compensation in *Drosophila* 590

Case Study: Genetic Regulation of the Development of the *Drosophila* Body Plan 591

Drosophila Developmental Stages 591

Embryonic Development 591

Microarray Analysis of *Drosophila* Development 598

Summary 600

Analytical Approaches to Solving Genetics Problems 601

Questions and Problems 601

CHAPTER 22

Genetics of Cancer 605

Relationship of the Cell Cycle to Cancer 607

Molecular Control of the Cell Cycle 607

Regulation of Cell Division in Normal Cells 607

Cancers Are Genetic Diseases 609

Genes and Cancer 610

Oncogenes 610

Tumor Suppressor Genes 618

Mutator Genes 624

Telomere Shortening, Telomerase, and Human Cancer 624

The Multistep Nature of Cancer 625

Chemicals and Radiation as Carcinogens 626

Chemical Carcinogens 626

Radiation 626

Summary 627

Analytical Approaches to Solving Genetics Problems 627

Questions and Problems 628

CHAPTER 23

Non-Mendelian Inheritance 631

Origin of Mitochondria and Chloroplasts 632

Organization of Extranuclear Genomes 632

Mitochondrial Genome 632

Chloroplast Genome 636

Rules of Non-Mendelian Inheritance 639

Examples of Non-Mendelian Inheritance 639

Shoot Variegation in the Four O'Clock 639

The [*poky*] Mutant of *Neurospora* 641

Yeast *petite* Mutants 643

Non-Mendelian Inheritance in *Chlamydomonas* 645

Human Genetic Diseases and Mitochondrial DNA Defects 647

Cytoplasmic Male Sterility and Hybrid Seed Production 647

Exceptions to Maternal Inheritance 648

Infectious Heredity: Killer Yeast 649

Contrasts to Non-Mendelian Inheritance 650
 Maternal Effect 650
Summary 651
Analytical Approaches to Solving Genetics Problems 652
Questions and Problems 653

CHAPTER 24

Population Genetics 657
Genetic Structure of Populations 659
 Genotype Frequencies 659
 Allele Frequencies 660
The Hardy-Weinberg Law 663
 Assumptions of the Hardy-Weinberg Law 664
 Predictions of the Hardy-Weinberg Law 664
 Derivation of the Hardy-Weinberg Law 665
 Extensions of the Hardy-Weinberg Law
 to Loci with More Than Two Alleles 667
 Extensions of the Hardy-Weinberg Law to
 Sex-Linked Alleles 667
 Testing for Hardy-Weinberg Proportions 667
 Using the Hardy-Weinberg Law to Estimate
 Allelic Frequencies 668
Genetic Variation in Space and Time 669
Genetic Variation in Natural Populations 670
 Measuring Genetic Variation at the Protein Level 671
 Measuring Genetic Variation at the DNA Level 673
**Forces That Change Gene Frequencies in
 Populations** 676
 Mutation 677
 Random Genetic Drift 679
 Migration 685
 Hardy-Weinberg and Natural Selection 687
 Balance Between Mutation and Selection 694
 Assortative Mating 695
 Inbreeding 695
**Summary of the Effects of Evolutionary Forces
 on the Genetic Structure of a Population** 696
 Changes in Allelic Frequency Within
 a Population 696
 Genetic Divergence Among Populations 696
 Increases and Decreases in Genetic Variation
 Within Populations 697

The Role of Genetics in Conservation Biology 697
Speciation 697
 Barriers to Gene Flow 698
 Genetic Basis for Speciation 698
Summary 699
**Analytical Approaches to Solving Genetics
 Problems** 699
Questions and Problems 700

CHAPTER 25

Molecular Evolution 705
Patterns and Modes of Substitutions 706
 Nucleotide Substitutions in DNA Sequences 706
 Rates of Nucleotide Substitutions 708
 Variation in Evolutionary Rates Between
 Genes 711
 Rates of Evolution in Mitochondrial DNA 713
 Molecular Clocks 714
Molecular Phylogeny 715
 Phylogenetic Trees 716
 Reconstruction Methods 718
 Phylogenetic Trees on a Grand Scale 721
Acquisition and Origins of New Functions 723
 Multigene Families 723
 Gene Duplication and Gene Conversion 724
Arabidopsis Genome Results 724
Summary 725
**Analytical Approaches to Solving Genetics
 Problems** 725
Questions and Problems 726

Glossary 729
Suggested Readings 749
Solutions to Selected Questions and Problems 763
Credits 811
Index 815
