

Oxidative Stress, Exercise and Aging

HELAINÉ M ALESSIO
ANN E HAGERMAN
EDITORS

Imperial College Press

CONTENTS

Preface	vii
1. Chemistry of reactive oxygen species and antioxidants	1
D.C. Close and A.E. Hagerman	
1.1 What are reactive oxygen species?	1
1.2 What are antioxidants?	4
1.3 Oxidized biomarkers	6
1.4 Summary	8
<i>References</i>	8
2. Oxidative stress in plants and animals	9
D.C. Close and A.E. Hagerman	
2.1 Introduction	9
2.2 Sources of oxidative stress in plants	11
2.3 Sources of oxidative stress in animals	11
2.4 Similar consequences of oxidative stress for plants and animals	11
2.5 Environmental factors inducing oxidative stress	12
2.6 Irradiation	12
2.7 Temperature extremes	14
2.8 Pollutants and toxic chemicals	15
2.9 Nutrient stress	17
2.10 Anoxia	18
2.11 Disease	19
2.12 Summary	20
<i>References</i>	20
3. The exercise continuum	25
R.L. Wiley	
3.1 Introduction	25
3.2 Isometric exercise	27
3.3 Isotonic exercise	28
3.4 The exercise continuum	31
3.5 Summary	34
<i>References</i>	34
4. Oxidative stress and muscle size, type, and action	35
H.M. Alessio	

4.1	Introduction	35
4.2	Oxidative stress in large and small muscles	36
4.3	Metabolism and oxidative stress in small and large animals	40
4.4	Radical damage and damage control in DNA	42
4.5	Muscle type and oxidative stress	43
4.6	Muscle remodeling and oxidative stress	47
4.7	Oxidative stress and muscle action	49
4.8	Aging and muscle action	53
4.9	Summary	56
	<i>References</i>	57
5.	Oxidative stress across the exercise continuum	59
	H.M. Alessio	
5.1	Introduction	59
5.2	Muscle contractions and reactive oxygen species	60
5.3	Age and exercise-induced ROS	61
5.4	ROS in aerobic and anaerobic environments	61
5.5	Muscle damage and ROS	62
5.6	Isometric exercise and oxidative stress	63
5.7	Isometric exercise and ROS	65
5.8	Exercise, hypoxia, and oxidative stress	67
5.9	Resistance exercise and oxidative stress	68
5.10	Sprint exercise and oxidative stress	70
5.11	Contact sports and oxidative stress	71
5.12	Aerobic exercise and oxidative stress	73
5.13	Cross-training sports and oxidative stress	75
5.14	Summary	82
	<i>References</i>	82
6.	Oxidative stress and antioxidant defense: Effects of aging and exercise	85
	L.L. Ji	
6.1	Introduction	85
6.2	ROS generation with aging and exercise	86
6.3	ROS generation and inflammation	90
6.4	Age-related changes in antioxidant systems	92
6.5	Antioxidant response and adaptation to exercise	95
6.6	Exercise and antioxidant signaling	98
6.7	Training adaptation in aging skeletal muscle	102
6.8	Aging, exercise, and phytochemical supplementation	104
6.9	Summary	105
	<i>References</i>	105

7. Muscle, oxidative stress and aging	109
J.S. Moylan, W.J. Durham, and M.B. Reid	
7.1 Introduction	109
7.2 Redox balance and aging: ROS and NO [•]	110
7.3 Antioxidants	113
7.4 Aging, redox signaling and muscle function and contractile function	114
7.5 Gene expression	117
7.6 Perturbing the system: Effects of nutrition	118
7.7 Perturbing the system: Effects of cytokines	119
7.8 Perturbing the system: Effects of training	120
7.9 Summary	121
References	122
8. Aging, exercise, antioxidants, and cardioprotection	125
J. Quindry and S. Powers	
8.1 Introduction	125
8.2 Overview of myocardial IR injury	126
8.3 Myocardial IR: Necrotic and apoptotic cell death	127
8.4 Oxidative stress and myocardial IR	128
8.5 Calcium overload and myocardial IR	131
8.6 Senescence and increased susceptibility of the myocardium to IR injury	132
8.7 Exercise-induced protection against myocardial IR injury	133
8.8 Mechanisms for exercise-induced cardioprotection	134
8.9 Exercise and Collateral Coronary Circulation	134
8.10 Exercise, heat shock proteins, and myocardial IR injury	136
8.11 Exercise, antioxidant capacity, and myocardial IR injury	137
8.12 Exercise, calcium overload, and myocardial IR injury	139
8.13 Exercise, age, and cardioprotection against IR-induced apoptosis	139
8.14 Exercise-induced cardioprotection: future directions	140
8.15 Summary	141
References	142
9. Genetic expressions: Oxidative stress, exercise, and aging	145
N.B. Schweitzer and H.M. Alessio	
9.1 Introduction	145
9.2 Gene expression and aging	148
9.3 Factors involved in aging and cell death	149
9.4 Skeletal muscle aging	151
9.5 Oxidative stress and gene regulation	153
9.6 Reactive oxygen species control gene expression	153

9.7 Advances in gene investigation	155
9.8 Gene expression and environment	156
9.9 High density oligonucleotide arrays	156
9.10 Gene expression and exercise	158
9.11 Exercise and lifespan	162
9.12 Gene expression in sedentary aged animals	163
9.13 Oxidative stress in genes: A shared mechanism in exercise and aging	164
9.14 Summary	167
References.	167
