Jon C. Herron

Contents

Preface	xi
---------	----

PART I

INTRODUCTION	I
--------------	---

CHAPTER I

A Case for Evolutionary Thinking: Understanding HIV	3
--	---

1.1 The Natural History of the HIV/AIDS Epidemic	4
1.2 Why Does AZT Work in the Short Run, But Fail in the Long Run?	11
<i>Box 1.1 Can understanding how resistance evolves help researchers design better treatments?</i>	16
1.3 Why is HIV Fatal?	16
1.4 Why Are Some People Resistant to HIV?	22
1.5 Where Did HIV Come From?	25
<i>Box 1.2 When did HIV move from chimpanzees to humans?</i>	28
Summary 30 • Questions 30	
Exploring the Literature 31 • Citations 32	

CHAPTER 2

The Pattern of Evolution	37
<i>Box 2.1 A brief history of ideas on evolution</i>	39
2.1 Evidence of Change through Time	40
2.2 Evidence of Common Ancestry	50
<i>Box 2.2 Homology and model organisms</i>	59
2.3 The Age of Earth	60
<i>Box 2.3 A closer look at radiometric dating</i>	64
2.4 Is There Necessarily a Conflict between Evolutionary Biology and Religion?	65
Summary 68 • Questions 68	
Exploring the Literature 69 • Citations 70	

CHAPTER 3

Darwinian Natural Selection	73
3.1 Artificial Selection: Domestic Animals and Plants	74
3.2 Evolution by Natural Selection	76
3.3 The Evolution of Flower Color in an Experimental Snapdragon Population	78
3.4 The Evolution of Beak Shape in Galápagos Finches	80
<i>Box 3.1 Issues that complicate how heritabilities are estimated</i>	84
3.5 The Nature of Natural Selection	90
3.6 The Evolution of Darwinism	94
3.7 The Debate over “Scientific Creationism” and Intelligent Design Creationism	97
Summary 105 • Questions 106	
Exploring the Literature 107 • Citations 107	

CHAPTER 4

Estimating Evolutionary Trees	111
4.1 The Logic of Phylogeny Inference	112
4.2 The Phylogeny of Whales	119
<i>Box 4.1 A note on distance methods</i>	126
4.3 Using Phylogenies to Answer Questions	130
Summary 136 • Questions 137	
Exploring the Literature 139 • Citations 139	

PART II

MECHANISMS OF EVOLUTIONARY CHANGE 141

CHAPTER 5

Mutation and Genetic Variation 143

- 5.1 Where New Alleles Come From 144
- 5.2 Where New Genes Come From 152
- 5.3 Chromosome Mutations 156
- 5.4 Measuring Genetic Variation in Natural Populations 160
 - Summary 166 • Questions 166
 - Exploring the Literature 167 • Citations 168

CHAPTER 6

Mendelian Genetics in Populations I: Selection and Mutation as Mechanisms of Evolution 169

- 6.1 Mendelian Genetics in Populations: The Hardy–Weinberg Equilibrium Principle 170
 - Box 6.1* Combining probabilities 175
 - Box 6.2* The Hardy–Weinberg equilibrium principle with more than two alleles 180
- 6.2 Selection 182
 - Box 6.3* A general treatment of selection 186
 - Box 6.4* Spongy brain diseases 189
 - Box 6.5* Statistical analysis of allele and genotype frequencies using the χ^2 (chi-square) test 192
 - Box 6.6* Predicting the frequency of the CCR5- Δ 32 allele in future generations 194
- 6.3 Patterns of Selection: Testing Predictions of Population Genetic Theory 194

Box 6.7 An algebraic treatment of selection on recessive and dominant alleles 198

Box 6.8 Stable equilibria with heterozygote superiority and unstable equilibria with heterozygote inferiority 202

6.4 Mutation 210

Box 6.9 A mathematical treatment of mutation as an evolutionary mechanism 212

Box 6.10 Allele frequencies under mutation–selection balance 215

Box 6.11 Estimating mutation rates for recessive alleles 216

Summary 218 • Questions 219

Exploring the Literature 220 • Citations 221

CHAPTER 7

Mendelian Genetics in Populations II: Migration, Genetic Drift, and Nonrandom Mating 223

7.1 Migration 225

Box 7.1 An algebraic treatment of migration as an evolutionary process 227

Box 7.2 Selection and migration in Lake Erie water snakes 229

7.2 Genetic Drift 232

Box 7.3 The probability that a given allele will be the one that drifts to fixation 241

Box 7.4 Effective population size 245

Box 7.5 The rate of evolutionary substitution under genetic drift 250

7.3 Genetic Drift and Molecular Evolution 251

7.4 Nonrandom Mating 264

Box 7.6 Genotype frequencies in an inbred population 269

7.5 Conservation Genetics of the Illinois Greater Prairie Chicken 273

Summary 276 • Questions 276

Exploring the Literature 278 • Citations 279

CHAPTER 8

Evolution at Multiple Loci: Linkage and Sex 281

8.1 Evolution at Two Loci: Linkage Equilibrium and Linkage Disequilibrium 282

Box 8.1 The coefficient of linkage disequilibrium 285

Box 8.2 Hardy–Weinberg analysis for two loci 286

	<i>Box 8.3 Sexual reproduction reduces linkage disequilibrium</i>	290			
8.2	Practical Reasons to Study Linkage Disequilibrium	295			
	<i>Box 8.4 Estimating the age of the GBA–84GG mutation</i>	297			
8.3	The Adaptive Significance of Sex	302			
	Summary 313 • Questions 313				
	Exploring the Literature 315 • Citations 316				
CHAPTER 9					
	Selection at Multiple Loci: Quantitative Genetics	319			
9.1	The Nature of Quantitative Traits	319	10.4	The Comparative Method	376
9.2	Identifying Loci That Contribute to Quantitative Traits	324		<i>Box 10.2 Calculating phylogenetically independent contrasts</i>	380
	<i>Box 9.1 QTL mapping</i>	328	10.5	Phenotypic Plasticity	380
9.3	Measuring Heritable Variation	333	10.6	Trade-Offs and Constraints	383
	<i>Box 9.2 Additive genetic variation versus dominance genetic variation</i>	336	10.7	Selection Operates on Different Levels	392
9.4	Measuring Differences in Survival and Reproductive Success	338	10.8	Strategies for Asking Interesting Questions	395
	<i>Box 9.3 The selection gradient and the selection differential</i>	340		Summary 396 • Questions 397	
9.5	Predicting the Evolutionary Response to Selection	341		Exploring the Literature 398 • Citations 399	
	<i>Box 9.4 Selection on multiple traits and correlated characters</i>	344	CHAPTER 11		
9.6	Modes of Selection and the Maintenance of Genetic Variation	346		Sexual Selection	401
9.7	The Bell-Curve Fallacy and Other Misinterpretations of Heritability	350	11.1	Sexual Dimorphism and Sex	402
	Summary 355 • Questions 355		11.2	Sexual Selection on Males: Competition	408
	Exploring the Literature 357 • Citations 358			<i>Box 11.1 Alternative male mating strategies</i>	412
			11.3	Sexual Selection on Males: Female Choice	415
				<i>Box 11.2 Runaway sexual selection in stalk-eyed flies?</i>	426
			11.4	Sexual Selection on Females	429
				<i>Box 11.3 Extra-pair copulations and multiple mating</i>	430
			11.5	Sexual Selection in Plants	434
			11.6	Sexual Dimorphism in Body Size in Humans	438
				Summary 440 • Questions 441	
				Exploring the Literature 443 • Citations 444	
PART III					
ADAPTATION					
		361	CHAPTER 12		
	Analyzing Adaptation: Evolutionary Analysis of Form and Function	363		Kin Selection and Social Behavior	447
10.1	All Hypotheses Must Be Tested: Oxpeckers Reconsidered	364	12.1	Kin Selection and the Evolution of Altruism	448
10.2	Experiments	367		<i>Box 12.1 Calculating coefficients of relatedness</i>	449
	<i>Box 10.1 A primer on statistical testing</i>	371			
10.3	Observational Studies	372			

<i>Box 12.2 Kin recognition</i>	454	14.2 Evolving Pathogens: Antibiotic Resistance	538
12.2 Evolution of Eusociality	459	14.3 Evolving Pathogens: Virulence	541
<i>Box 12.3 The evolution of the sex ratio</i>	462	14.4 Tissues as Evolving Populations of Cells	546
12.3 Parent–Offspring Conflict	467	<i>Box 14.1 Genetic sleuthing solves a medical mystery</i>	547
12.4 Reciprocal Altruism	471	14.5 The Adaptationist Program Applied to Humans	550
<i>Box 12.4 Prisoner's dilemma: Analyzing cooperation and conflict using game theory</i>	473	14.6 Adaptation and Medical Physiology: Fever	556
Summary 477 • Questions 478		14.7 Adaptation and Human Behavior: Parenting	561
Exploring the Literature 479 • Citations 480		<i>Box 14.2 Is cultural evolution Darwinian?</i>	562
		Summary 569 • Questions 569	
		Exploring the Literature 571 • Citations 571	
CHAPTER 13		CHAPTER 15	
Aging and Other Life History Characters	483	Phylogenomics and the Molecular Basis of Adaptation	575
13.1 Basic Issues in Life History Analysis	485	15.1 Transposable Elements and Levels of Selection	576
13.2 Why Do Organisms Age and Die?	487	<i>Box 15.1 Categories of transposable elements</i>	578
<i>Box 13.1 A trade-off between cancer risk and aging</i>	490	15.2 Lateral Gene Transfer	584
13.3 How Many Offspring Should an Individual Produce in a Given Year?	502	15.3 The Molecular Basis of Adaptation	591
<i>Box 13.2 Is there an evolutionary explanation for menopause?</i>	503	15.4 Frontiers in Phylogenomics	596
13.4 How Big Should Each Offspring Be?	509	Summary 600 • Questions 600	
13.5 Conflicts of Interest between Life Histories	514	Exploring the Literature 601 • Citations 601	
13.6 Life Histories in a Broader Evolutionary Context	517		
Summary 524 • Questions 524			
Exploring the Literature 526 • Citations 527			
CHAPTER 14		PART IV	
Evolution and Human Health	529	THE HISTORY OF LIFE	603
14.1 Evolving Pathogens: Evasion of the Host's Immune Response	531		

CHAPTER 16

Mechanisms of Speciation	605
16.1 Species Concepts	605
<i>Box 16.1 What about bacteria and archaea?</i>	607
16.2 Mechanisms of Genetic Isolation	611
16.3 Mechanisms of Divergence	616
16.4 Secondary Contact	623
16.5 The Genetics of Speciation	629
Summary 633 • Questions 634	
Exploring the Literature 635 • Citations 635	

CHAPTER 17

The Origins of Life and Precambrian Evolution 639

- 17.1 What Was the First Living Thing? 640
- 17.2 Where Did the First Living Thing Come From? 651
 - Box 17.1 The Panspermia Hypothesis* 652
- 17.3 What Was the Last Common Ancestor of All Extant Organisms and What Is the Shape of the Tree of Life? 660
- 17.4 How Did the Last Common Ancestor's Descendants Evolve into Today's Organisms? 675
 - Summary 680 • Questions 681
 - Exploring the Literature 683 • Citations 684

CHAPTER 18

The Cambrian Explosion and Beyond 689

- 18.1 The Nature of the Fossil Record 690
- 18.2 The Cambrian Explosion 694
- 18.3 Macroevolutionary Patterns 702
- 18.4 Mass Extinctions 709
 - Summary 720 • Questions 721
 - Exploring the Literature 722 • Citations 722

CHAPTER 19

Development and Evolution 725

- 19.1 The Foundations of Evo-Devo Research 726
- 19.2 Homeotic Genes and Diversification in Animal Body Plans 728
- 19.3 Deep Homology and Diversification in Animal Limbs 735
- 19.4 Homeotic Genes and the Evolution of the Flower 742
- 19.5 Frontiers in Evo-Devo Research 747
 - Summary 749 • Questions 749
 - Exploring the Literature 750 • Citations 750

CHAPTER 20

Human Evolution 753

- 20.1 Relationships among Humans and Extant Apes 754
 - Box 20.1 Genetic differences between humans, chimpanzees, and gorillas* 762
- 20.2 The Recent Ancestry of Humans 764
- 20.3 The Origin of the Species *Homo sapiens* 773
 - Box 20.2 Genetic diversity among living humans* 776
 - Box 20.3 Using linkage disequilibrium to date the divergence between African and non-African populations* 784
- 20.4 The Evolution of Uniquely Human Traits 786
 - Summary 791 • Questions 792
 - Exploring the Literature 793 • Citations 795

Glossary 799

Illustration Credits 806
