

# HORMONAL REGULATION OF FARM ANIMAL GROWTH

K.L. HOSSNER

CABI Publishing

# Contents

<b>1</b>	<b>Whole Animal Growth</b>	<b>1</b>
	Measuring Animal Growth	1
	Embryonic and Fetal Growth	3
	Growth Curves	4
	Genetics, Nutrition and Environmental Effects on Whole Animal Growth	6
	Genetics	6
	Nutrition	9
	Environmental factors	10
<b>2</b>	<b>Cellular and Molecular Biology</b>	<b>13</b>
	Prokaryotic and Eukaryotic Organisms	13
	Eukaryotic cell organelles	14
	The Cell Cycle	16
	The Central Dogma of Cell Biology	18
	Eukaryotic genes	19
	Ribonucleic Acid	21
	Messenger RNA and translation of protein	21
	RNA polymerases	23
	Regulation of gene transcription	24
	Transcriptional control of specific genes	25
	Transcription factors	26
	Biotechnology and Genetic Engineering	27
	Transgenic Animals and their Potential	28
	Identifying, Isolating and Transferring Genes	28
	Homologous recombination, gene targeting and gene knockouts	33
<b>3</b>	<b>The Endocrine System</b>	<b>37</b>
	Control of Pituitary Hormone Secretion	43
	Hormone Receptors	46
	Effector Molecules, Transducers and Second Messengers	48

<b>4</b>	<b>Development of Muscle, Skeletal System and Adipose Tissue</b>	<b>55</b>
	Embryonic Development and Cell Differentiation	55
	Cell Proliferation and Differentiation	59
	The Skeletal System and Bone Growth	60
	Types of Bones and Gross Anatomy	61
	Bone Cells and Bone Matrix Formation	61
	Osteoclasts and bone resorption	64
	Regulation of osteoclast function	65
	The Epiphyseal Plate	67
	Skeletal Muscle Development	68
	Embryonic formation of skeletal muscle	68
	Skeletal muscle satellite cells	69
	Myofilaments, Myofibrils and Sarcomeres	71
	Sarcomeric proteins: actin, myosin and titin	73
	Myofibres and muscle contraction	74
	Skeletal Muscle Fibre Types	77
	Skeletal muscle protein turnover	79
	The formation of multinucleated skeletal muscle cells	80
	Adipose Tissue Growth and Development	82
	Brown adipose tissue	82
	White adipose tissue	83
	Adipose tissue development	84
	Adipose tissue growth: hyperplasia vs hypertrophy	85
	Lipogenesis and Lipolysis	87
<b>5</b>	<b>Growth Hormone and Insulin-like Growth Factors</b>	<b>94</b>
	The GH Molecule	94
	Control of GH secretion	96
	GH receptors	99
	Metabolic actions of GH	101
	Excess and inadequate GH: giants and dwarfs	104
	IGFs or Somatomedins	105
	Discovery of the IGFs	105
	IGF genes and molecules	107
	IGF receptors	108
	IGF-binding proteins	110
	Metabolic effects of the IGFs	111
	Effects of the IGFs on animal growth	112
	Modification of the somatomedin hypothesis	115
	Effects of GH on Farm Animal Production	116
	GH and the development of transgenic animals	119
<b>6</b>	<b>Calcium Homeostasis and Regulation of Bone Growth</b>	<b>123</b>
	Hormonal Regulation of Calcium Homeostasis	124

Parathyroid hormone	124
1,25-Dihydroxy vitamin D <sub>3</sub>	126
Biological actions of 1,25-dihydroxy vitamin D <sub>3</sub>	127
Calcitonin	129
Regulation of Bone Growth and Development	131
The hedgehogs and early skeletal differentiation	131
Regulation of bone growth and differentiation by hormones	132
Growth factors and bone	135
FGF	135
PDGF	137
Transforming growth factor- $\beta$	140
Bone morphogenetic proteins	143
<b>7 Hormones, Growth Factors and Skeletal Muscle</b>	146
Experimental Systems to Study Myogenesis	146
Myogenic cell systems	147
Muscle Regulatory Factors (MRFs)	148
Effects of the MRFs on muscle development	150
Regulation of MRF expression	151
Growth Factors Affecting Muscle Growth	153
IGFs	153
Myostatin	155
FGF	156
TGF- $\beta$	156
BMPs	157
Hepatocyte growth factor	157
Hormones regulating muscle growth	158
<b>8 Hormones, Growth Factors and Adipose Tissue</b>	163
Cell Systems Used to Study Adipogenesis	163
Transcription Factors and Adipogenesis	166
PPARs	167
C/EBPs	169
ADD1/SREBP1	170
Nuclear co-activators and co-repressors: fine-tuning the adipogenic response	172
Hormones and Growth Factors Affecting Preadipocytes and Adipocytes	173
Insulin	173
GH and the IGFs	174
Glucocorticoids	176
Prostaglandins and cAMP	176
Negative Regulators of Adipose Differentiation	177
Adipose tissue as an endocrine organ	178

<b>9 Steroids and Animal Growth</b>	181
Oestrogens and Ruminant Growth	183
Oestrogens and Non-ruminants	185
Androgens and Ruminant Growth	186
Mechanism of Action of Steroids in Ruminant Growth	187
Androgen mechanisms of action	188
<b>10 Catecholamines, Beta-agonists and Nutrient Repartitioning</b>	191
The Autonomic Nervous System and the Adrenal Medulla	192
Adrenergic Receptors	195
$\beta$ -Adrenergic agonists	198
Effects of $\beta$ -adrenergic agonists on growth and body composition	198
<b>11 Leptin, Body Composition and Appetite Control</b>	202
Theories on the Short-term Regulation of Food Intake	204
The Long-term Regulation of Food Intake – the Lipostat Theory	205
The Discovery of Leptin	207
The leptin gene and molecule	207
Leptin receptors and binding proteins	208
Biological actions of leptin	210
Effects of leptin on reproduction	212
Direct peripheral effects of leptin	212
Regulation of leptin concentrations	213
Significance of leptin to animal production	213
Appetite-inducing (Orexigenic) Peptides of the Hypothalamus	214
<b>Index</b>	217
