

# Statistics for Veterinary and Animal Science

SECOND EDITION

 Blackwell  
Publishing

Aviva Petrie & Paul Watson

# Contents

<i>Preface</i>	ix	3.6 Relationships between distributions	42
<i>Preface to First Edition</i>	xi	Exercises	43
<b>1 The whys and wherefores of statistics</b>	<b>1</b>	<b>4 Sampling and sampling distributions</b>	<b>45</b>
1.1 Learning objectives	1	4.1 Learning objectives	45
1.2 Aims of the book	1	4.2 The distinction between the sample and the population	45
1.3 What is statistics?	2	4.3 Statistical inference	45
1.4 Statistics in veterinary and animal science	3	4.4 The sampling distribution of the mean	47
1.5 Evidence-based veterinary medicine	4	4.5 The confidence interval for a mean	49
1.6 Types of variable	4	4.6 The sampling distribution of the proportion	51
1.7 Variations in measurements	5	4.7 The confidence interval for a proportion	52
1.8 Terms relating to measurement quality	8	4.8 Bootstrapping and jackknifing	52
1.9 Populations and samples	8	Exercises	53
1.10 Types of statistical procedures	9	<b>5 Experimental design and clinical trials</b>	<b>54</b>
1.11 Conclusion	10	5.1 Learning objectives	54
Exercises	10	5.2 Types of study	54
<b>2 Descriptive statistics</b>	<b>12</b>	5.3 Introducing clinical trials	58
2.1 Learning objectives	12	5.4 The importance of design in the clinical trial	58
2.2 Summarizing data	12	5.5 The control group	59
2.3 Empirical frequency distributions	12	5.6 Assignment of animals to the treatment groups	60
2.4 Tables	14	5.7 The avoidance of bias in the assessment procedure	63
2.5 Diagrams	14	5.8 Increasing the precision of the estimates	64
2.6 Numerical measures	19	5.9 Further considerations	66
2.7 The reference range	25	Exercises	71
Exercises	25	<b>6 An introduction to hypothesis testing</b>	<b>73</b>
<b>3 Probability and probability distributions</b>	<b>28</b>	6.1 Learning objectives	73
3.1 Learning objectives	28	6.2 Introduction	73
3.2 Probability	28		
3.3 Probability distributions	30		
3.4 Discrete probability distributions	30		
3.5 Continuous probability distributions	33		

6.3 Basic concepts of hypothesis testing	73	9.6 Comparing two proportions – paired observations	115
6.4 Type I and Type II errors	77	9.7 The Chi-squared goodness-of-fit test	117
6.5 The distinction between statistical and biological significance	78	Exercises	118
6.6 The confidence interval approach to hypothesis testing	79	<b>10 Linear correlation and regression</b>	<b>121</b>
6.7 Collecting our thoughts on confidence intervals	80	10.1 Learning objectives	121
6.8 Equivalence and non-inferiority studies	80	10.2 Introducing linear correlation and regression	121
Exercises	81	10.3 Linear correlation	122
<b>7 Hypothesis tests 1 – the <i>t</i>-test: comparing one or two means</b>	<b>83</b>	10.4 Simple (univariable) linear regression	127
7.1 Learning objectives	83	10.5 Regression to the mean	137
7.2 Requirements for hypothesis tests for comparing means	83	Exercises	137
7.3 One-sample <i>t</i> -test	85	<b>11 Further regression analyses</b>	<b>141</b>
7.4 Two-sample <i>t</i> -test	86	11.1 Learning objectives	141
7.5 The paired <i>t</i> -test	90	11.2 Introduction	141
Exercises	94	11.3 Multiple linear regression	141
<b>8 Hypothesis tests 2 – the <i>F</i>-test: comparing two variances or more than two means</b>	<b>95</b>	11.4 Multiple logistic regression – a binary response variable	148
8.1 Learning objectives	95	11.5 Poisson regression	151
8.2 Introduction	95	11.6 Regression methods for clustered data	153
8.3 The <i>F</i> -test for the equality of two variances	95	Exercises	156
8.4 Levene's test for the equality of two or more variances	97	<b>12 Non-parametric statistical methods</b>	<b>158</b>
8.5 The analysis of variance (ANOVA) for the equality of means	97	12.1 Learning objectives	158
8.6 One-way ANOVA	100	12.2 Parametric and non-parametric tests	158
Exercises	104	12.3 The sign test	160
<b>9 Hypothesis tests 3 – the Chi-squared test: comparing proportions</b>	<b>107</b>	12.4 Wilcoxon signed rank test	162
9.1 Learning objectives	107	12.5 Wilcoxon rank sum test	164
9.2 Introduction	107	12.6 Non-parametric analyses of variance	166
9.3 Testing a hypothesis about a single proportion	107	12.7 Spearman's rank correlation coefficient	168
9.4 Comparing two proportions – independent groups	108	Exercises	170
9.5 Testing associations in an $r \times c$ contingency table	112	<b>13 Further aspects of design and analysis</b>	<b>174</b>
		13.1 Learning objectives	174
		13.2 Transformations	174
		13.3 Sample size	177
		13.4 Sequential and interim analysis	180

13.5 Meta-analysis	181	15.5 What is involved in practising EBVM?	214
13.6 Methods of sampling Exercises	184 188	15.6 Integrating EBVM into clinical practice	218
<b>14 Additional techniques</b>	<b>191</b>	15.7 Guidelines for reporting results	218
14.1 Learning objectives	191	15.8 Example of CONSORT and EBVM	220
14.2 Diagnostic tests	191	15.9 Conclusion Exercises	221 221
14.3 Bayesian analysis	195	<b>Solutions to exercises</b>	<b>224</b>
14.4 Measuring agreement	196	<b>References</b>	<b>241</b>
14.5 Measurements at successive points in time	202	<b>Appendices</b>	
14.6 Survival analysis	204	A Statistical tables	247
14.7 Multivariate analysis Exercises	208 209	B Tables of confidence intervals	263
<b>15 Evaluation and reporting – evidence-based veterinary medicine and the CONSORT Statement</b>	<b>212</b>	C Glossary of notation	265
15.1 Learning objectives	212	D Glossary of terms	268
15.2 Introduction	212	E Flow charts for selection of appropriate tests	286
15.3 What is EBVM?	213	<i>Index</i>	289
15.4 Why has EBVM developed?	213
