

SECOND EDITION

CAMBRIDGE
AEROSPACE
SERIES

Principles of
**HELICOPTER
AERODYNAMICS**

J. GORDON LEISHMAN

Contents

<i>Preface to the Second Edition</i>	page xix
<i>Preface to the First Edition</i>	xxiii
<i>Acknowledgments</i>	xxvii
<i>List of Main Symbols</i>	xxx1
1 Introduction: A History of Helicopter Flight	1
1.1 Rising Vertically	1
1.2 Producing Thrust	4
1.3 Key Technical Problems in Attaining Vertical Flight	5
1.4 Early Thinking	6
1.5 The Hoppers	11
1.6 The First Hoverers	17
1.7 Not Quite a Helicopter	20
1.8 Engines: A Key Enabling Technology	23
1.9 On the Verge of Success	25
1.10 The First Successes	28
1.11 Toward Mass Production	33
1.12 Maturing Technology	40
1.13 Compounds, Tilt-Wings, and Tilt-Rotors	47
1.14 Chapter Review	49
1.15 Questions	50
Bibliography	51
2 Fundamentals of Rotor Aerodynamics	55
2.1 Introduction	55
2.2 Momentum Theory Analysis in Hovering Flight	58
2.2.1 Flow Near a Hovering Rotor	59
2.2.2 Conservation Laws of Aerodynamics	60
2.2.3 Application to a Hovering Rotor	61
2.3 Disk Loading and Power Loading	65
2.4 Induced Inflow Ratio	66
2.5 Thrust and Power Coefficients	66
2.6 Comparison of Theory with Measured Rotor Performance	68
2.7 Nonideal Effects on Rotor Performance	68
2.8 Figure of Merit	70
2.9 Estimating Nonideal Effects from Rotor Measurements	74
2.10 Induced Tip Loss	74
2.11 Rotor Solidity and Blade Loading Coefficient	77
2.12 Power Loading	80

2.13	Momentum Analysis in Axial Climb and Descent	81
2.13.1	Axial Climb	81
2.13.2	Axial Descent	83
2.13.3	Region between Hover and Windmill State	86
2.13.4	Power Required in Axial Climbing and Descending Flight	87
2.13.5	Four Working States of the Rotor in Axial Flight	88
2.13.6	Vortex Ring State	90
2.13.7	Autorotation	91
2.14	Momentum Analysis in Forward Flight	93
2.14.1	Induced Velocity in Forward Flight	95
2.14.2	Special Case, $\alpha = 0$	96
2.14.3	Numerical Solution to Inflow Equation	97
2.14.4	General Form of the Inflow Equation	99
2.14.5	Validity of the Inflow Equation	99
2.14.6	Rotor Power Requirements in Forward Flight	99
2.15	Other Applications of the Momentum Theory	101
2.15.1	Coaxial Rotor Systems	101
2.15.2	Tandem Rotor Systems	106
2.16	Chapter Review	110
2.17	Questions	110
	Bibliography	113
3	Blade Element Analysis	115
3.1	Introduction	115
3.2	Blade Element Analysis in Hover and Axial Flight	117
3.2.1	Integrated Rotor Thrust and Power	119
3.2.2	Thrust Approximations	119
3.2.3	Torque–Power Approximations	122
3.2.4	Tip-Loss Factor	122
3.3	Blade Element Momentum Theory (BEMT)	125
3.3.1	Assumed Radial Distributions of Inflow on the Blades	126
3.3.2	Radial Inflow Equation	127
3.3.3	Ideal Twist	128
3.3.4	BEMT: Numerical Solution	130
3.3.5	Distributions of Inflow and Airloads	131
3.3.6	Effects of Swirl Velocity	134
3.3.7	The Optimum Hovering Rotor	135
3.3.8	Circulation Theory of Lift	138
3.3.9	Power Estimates for the Rotor	139
3.3.10	Prandtl’s Tip-Loss Function	141
3.3.11	Blade Design and Figure of Merit	145
3.3.12	BEMT in Climbing Flight	146
3.3.13	Further Comparisons of BEMT with Experiment	148
3.3.14	Compressibility Corrections to Rotor Performance	150
3.4	Equivalent Blade Chords and Weighted Solidity	152
3.4.1	Mean Wing Chords	152
3.4.2	Thrust Weighted Solidity	153
3.4.3	Power–Torque Weighted Solidity	153
3.4.4	Weighted Solidity of the Optimum Rotor	154

3.4.5	Weighted Solidities of Tapered Blades	154
3.4.6	Mean Lift Coefficient	155
3.5	Blade Element Analysis in Forward Flight	156
3.5.1	Determining Blade Forces	156
3.5.2	Definition of the Approximate Induced Velocity Field	158
3.6	Chapter Review	166
3.7	Questions	167
	Bibliography	169
4	Rotating Blade Motion	171
4.1	Introduction	171
4.2	Types of Rotors	172
4.3	Equilibrium about the Flapping Hinge	174
4.4	Equilibrium about the Lead–Lag Hinge	176
4.5	Equation of Motion for a Flapping Blade	178
4.6	Physical Description of Blade Flapping	183
4.6.1	Coning Angle	183
4.6.2	Longitudinal Flapping Angle	183
4.6.3	Lateral Flapping Angle	185
4.6.4	Higher Harmonics of Blade Flapping	185
4.7	Dynamics of Blade Flapping with a Hinge Offset	186
4.8	Blade Feathering and the Swashplate	188
4.9	Review of Rotor Reference Axes	190
4.10	Dynamics of a Lagging Blade with a Hinge Offset	194
4.11	Coupled Flap–Lag Motion	196
4.12	Coupled Pitch–Flap Motion	198
4.13	Other Types of Rotors	199
4.13.1	Teetering Rotor	199
4.13.2	Semi-Rigid or Hingeless Rotors	200
4.14	Introduction to Rotor Trim	202
4.14.1	Equations for Free-Flight Trim	204
4.14.2	Typical Trim Solution Procedure for Level Flight	207
4.15	Chapter Review	209
4.16	Questions	209
	Bibliography	211
5	Helicopter Performance	212
5.1	Introduction	212
5.2	The International Standard Atmosphere	212
5.3	Hovering and Axial Climb Performance	215
5.4	Forward Flight Performance	217
5.4.1	Induced Power	218
5.4.2	Blade Profile Power	219
5.4.3	Compressibility Losses and Tip Relief	220
5.4.4	Reverse Flow	223
5.4.5	Parasitic Power	225
5.4.6	Climb Power	226
5.4.7	Tail Rotor Power	226
5.4.8	Total Power	227

5.5	Performance Analysis	228
5.5.1	Effect of Gross Weight	228
5.5.2	Effect of Density Altitude	229
5.5.3	Lift-to-Drag Ratios	229
5.5.4	Climb Performance	230
5.5.5	Engine Fuel Consumption	231
5.5.6	Speed for Minimum Power	233
5.5.7	Speed for Maximum Range	235
5.5.8	Range–Payload and Endurance–Payload Relations	237
5.5.9	Maximum Altitude or Ceiling	238
5.5.10	Factors Affecting Maximum Attainable Forward Speed	239
5.5.11	Performance of Coaxial and Tandem Dual Rotor Systems	240
5.6	Autorotational Performance	242
5.6.1	Autorotation in Forward Flight	246
5.6.2	Height–Velocity (H–V) Curve	249
5.6.3	Autorotation Index	251
5.7	Vortex Ring State (VRS)	252
5.7.1	Quantification of VRS Effects	252
5.7.2	Implications of VRS on Flight Boundary	256
5.8	Ground Effect	257
5.8.1	Hovering Flight Near the Ground	258
5.8.2	Forward Flight Near the Ground	260
5.9	Performance in Maneuvering Flight	263
5.9.1	Steady Maneuvers	264
5.9.2	Transient Maneuvers	265
5.10	Factors Influencing Performance Degradation	269
5.11	Chapter Review	271
5.12	Questions	272
	Bibliography	273
6	Aerodynamic Design of Helicopters	277
6.1	Introduction	277
6.2	Overall Design Requirements	277
6.3	Conceptual and Preliminary Design Processes	279
6.4	Design of the Main Rotor	280
6.4.1	Rotor Diameter	281
6.4.2	Tip Speed	283
6.4.3	Rotor Solidity	285
6.4.4	Number of Blades	288
6.4.5	Blade Twist	290
6.4.6	Blade Planform and Tip Shape	292
6.4.7	Airfoil Sections	295
6.5	Case Study: The BERP Rotor	301
6.6	Fuselage Aerodynamic Design Issues	304
6.6.1	Fuselage Drag	304
6.6.2	Vertical Drag and Download Penalty	307
6.6.3	Vertical Drag Recovery	309
6.6.4	Fuselage Side-Force	310

6.7	Empennage Design	311
6.7.1	Horizontal Stabilizer	311
6.7.2	Vertical Stabilizer	312
6.8	Role of Wind Tunnels in Aerodynamic Design	313
6.9	Design of Tail Rotors	314
6.9.1	Physical Size	315
6.9.2	Thrust Requirements	315
6.9.3	Precessional Stall Issues	317
6.9.4	“Pushers” versus “Tractors”	318
6.9.5	Design Requirements	319
6.9.6	Representative Tail Rotor Designs	320
6.10	Other Anti-Torque Devices	321
6.10.1	Fan-in-Fin	321
6.10.2	NOTAR Design	324
6.11	High-Speed Rotorcraft	325
6.11.1	Compound Helicopters	325
6.11.2	Tilt-Rotors	327
6.11.3	Other High-Speed Concepts	328
6.12	Smart Rotor Systems	330
6.13	Human-Powered Helicopter	331
6.14	Hovering Micro Air Vehicles	334
6.15	Chapter Review	338
6.16	Questions	338
	Bibliography	340
7	Aerodynamics of Rotor Airfoils	347
7.1	Introduction	347
7.2	Helicopter Rotor Airfoil Requirements	348
7.3	Reynolds Number and Mach Number Effects	350
7.3.1	Reynolds Number	350
7.3.2	Concept of the Boundary Layer	352
7.3.3	Mach Number	357
7.3.4	Model Rotor Similarity Parameters	359
7.4	Airfoil Shape Definition	360
7.5	Airfoil Pressure Distributions	363
7.5.1	Pressure Coefficient	363
7.5.2	Critical Pressure Coefficient	364
7.5.3	Synthesis of Chordwise Pressure	365
7.5.4	Measurements of Chordwise Pressure	366
7.6	Aerodynamics of a Representative Airfoil Section	368
7.6.1	Integration of Distributed Forces	368
7.6.2	Pressure Integration	370
7.6.3	Representative Force and Moment Results	371
7.7	Pitching Moment and Related Issues	374
7.7.1	Aerodynamic Center	375
7.7.2	Center of Pressure	377
7.7.3	Effect of Airfoil Shape on Pitching Moment	378
7.7.4	Use of Trailing Edge Tabs	381
7.7.5	Reflexed Airfoils	383

7.8	Drag	383
7.9	Maximum Lift and Stall Characteristics	385
7.9.1	Effects of Reynolds Number	389
7.9.2	Effects of Mach Number	392
7.10	Advanced Rotor Airfoil Design	398
7.11	Representing Static Airfoil Characteristics	401
7.11.1	Linear Aerodynamic Models	401
7.11.2	Nonlinear Aerodynamic Models	403
7.11.3	Table Look-Up	403
7.11.4	Direct Curve Fitting	403
7.11.5	Beddoes Method	404
7.11.6	High Angle of Attack Range	407
7.12	Circulation Controlled Airfoils	409
7.13	Very Low Reynolds Number Airfoil Characteristics	411
7.14	Effects of Damage on Airfoil Performance	412
7.15	Chapter Review	415
7.16	Questions	416
	Bibliography	418
8	Unsteady Airfoil Behavior	423
8.1	Introduction	423
8.2	Sources of Unsteady Aerodynamic Loading	424
8.3	Concepts of the Blade Wake	424
8.4	Reduced Frequency and Reduced Time	427
8.5	Unsteady Attached Flow	428
8.6	Principles of Quasi-Steady Thin-Airfoil Theory	429
8.7	Theodorsen's Theory	431
8.7.1	Pure Angle of Attack Oscillations	434
8.7.2	Pure Plunging Oscillations	436
8.7.3	Pitching Oscillations	438
8.8	The Returning Wake: Loewy's Problem	441
8.9	Sinusoidal Gust: Sears's Problem	442
8.10	Indicial Response: Wagner's Problem	446
8.11	Sharp-Edged Gust: Küssner's Problem	448
8.12	Traveling Sharp-Edged Gust: Miles's Problem	450
8.13	Time-Varying Incident Velocity	453
8.14	General Application of the Indicial Response Method	457
8.14.1	Recurrence Solution to the Duhamel Integral	459
8.14.2	State-Space Solution for Arbitrary Motion	463
8.15	Indicial Method for Subsonic Compressible Flow	465
8.15.1	Approximations to the Indicial Response	467
8.15.2	Indicial Lift from Angle of Attack	469
8.15.3	Indicial Lift from Pitch Rate	470
8.15.4	Determination of Indicial Function Coefficients	471
8.15.5	Indicial Pitching Moment from Angle of Attack	474
8.15.6	Indicial Pitching Moment from Pitch Rate	474
8.15.7	Unsteady Axial Force and Airfoil Drag	476
8.15.8	State-Space Aerodynamic Model for Compressible Flow	478
8.15.9	Comparison with Experiment	480

8.16	Nonuniform Vertical Velocity Fields	483
8.16.1	Exact Subsonic Linear Theory	483
8.16.2	Approximations to the Sharp-Edged Gust Functions	484
8.16.3	Response to an Arbitrary Vertical Gust	487
8.16.4	Blade–Vortex Interaction (BVI) Problem	488
8.16.5	Convecting Vertical Gusts in Subsonic Flow	490
8.17	Time-Varying Incident Mach Number	492
8.18	Unsteady Aerodynamics of Flaps	492
8.18.1	Incompressible Flow Theory	493
8.18.2	Subsonic Flow Theory	497
8.18.3	Comparison with Measurements	500
8.19	Principles of Noise Produced by Unsteady Forces	502
8.19.1	Retarded Time and Source Time	504
8.19.2	Wave Tracing	505
8.19.3	Compactness	506
8.19.4	Trace or Phase Mach Number	507
8.19.5	Ffowcs-Williams–Hawkins Equation	508
8.19.6	BVI Acoustic Model Problem	510
8.19.7	Comparison of Aeroacoustic Methods	513
8.19.8	Methods of Rotor Noise Reduction	515
8.20	Chapter Review	516
8.21	Questions	517
	Bibliography	519
9	Dynamic Stall	525
9.1	Introduction	525
9.2	Flow Morphology of Dynamic Stall	527
9.3	Dynamic Stall in the Rotor Environment	529
9.4	Effects of Forcing Conditions on Dynamic Stall	531
9.5	Modeling of Dynamic Stall	535
9.5.1	Semi-Empirical Models of Dynamic Stall	536
9.5.2	Capabilities of Dynamic Stall Modeling	541
9.5.3	Future Modeling Goals with Semi-Empirical Models	543
9.6	Torsional Damping	545
9.7	Effects of Sweep Angle on Dynamic Stall	547
9.8	Effect of Airfoil Shape on Dynamic Stall	551
9.9	Three-Dimensional Effects on Dynamic Stall	553
9.10	Time-Varying Velocity Effects on Dynamic Stall	556
9.11	Prediction of In-Flight Airloads	557
9.12	Stall Control	559
9.13	Chapter Review	560
9.14	Questions	561
	Bibliography	562
10	Rotor Wakes and Blade Tip Vortices	567
10.1	Introduction	567
10.2	Flow Visualization Techniques	568
10.2.1	Natural Condensation Effects	568
10.2.2	Smoke Flow Visualization	569
10.2.3	Density Gradient Methods	570

10.3	Characteristics of the Rotor Wake in Hover	572
10.3.1	General Features	572
10.3.2	Wake Geometry in Hover	573
10.4	Characteristics of the Rotor Wake in Forward Flight	575
10.4.1	Wake Boundaries	577
10.4.2	Blade–Vortex Interactions (BVIs)	578
10.5	Other Characteristics of Rotor Wakes	582
10.5.1	Periodicity versus Aperiodicity	582
10.5.2	Vortex Perturbations and Instabilities	582
10.6	Detailed Structure of the Tip Vortices	584
10.6.1	Velocity Field	585
10.6.2	Models for the Tip Vortex	586
10.6.3	Vorticity Diffusion Effects and Vortex Core Growth	592
10.6.4	Correlation of Rotor Tip Vortex Data	594
10.6.5	Flow Rotation Effects on Turbulence Inside Vortices	595
10.7	Vortex Models of the Rotor Wake	598
10.7.1	Biot–Savart Law	599
10.7.2	Vortex Segmentation	601
10.7.3	Governing Equations for the Convecting Vortex Wake	602
10.7.4	Prescribed Wake Models for Hovering Flight	604
10.7.5	Prescribed Vortex Wake Models for Forward Flight	607
10.7.6	Free-Vortex Wake Analyses	614
10.8	Aperiodic Wake Developments	627
10.8.1	Wake Stability Analysis	627
10.8.2	Flow Visualization of Transient Wake Problems	630
10.8.3	Dynamic Inflow	631
10.8.4	Time-Marching Free-Vortex Wakes	633
10.8.5	Simulation of Carpenter & Friedovich Problem	633
10.9	General Dynamic Inflow Models	635
10.10	Descending Flight and the Vortex Ring State	638
10.11	Wake Developments in Maneuvering Flight	640
10.12	Chapter Review	645
10.13	Questions	646
	Bibliography	647
11	Rotor–Airframe Interactional Aerodynamics	655
11.1	Introduction	655
11.2	Rotor–Fuselage Interactions	657
11.2.1	Effects of the Fuselage on Rotor Performance	658
11.2.2	Time-Averaged Effects on the Airframe	662
11.2.3	Unsteady Rotor–Fuselage Interactions	666
11.2.4	Fuselage Side-Forces	673
11.2.5	Modeling of Rotor–Fuselage Interactions	674
11.3	Rotor–Empennage Interactions	676
11.3.1	Airloads on the Horizontal Tail	679
11.3.2	Modeling of Rotor–Empennage Interactions	680
11.4	Rotor–Tail Rotor Interactions	682
11.5	Chapter Review	685
11.6	Questions	686
	Bibliography	687

12	Autogiros and Gyroplanes	692
12.1	Introduction	692
12.2	The Curious Phenomenon of Autorotation	693
12.3	Review of Autorotational Physics	694
12.4	Rolling Rotors: The Dilemma of Asymmetric Lift	699
12.5	Innovation of the Flapping and Lagging Hinges	700
12.6	Prerotating the Rotor	701
12.7	Autogiro Theory Meets Practice	702
12.8	Vertical Flight Performance of the Autogiro	704
12.9	Forward Flight Performance of the Autogiro	705
12.10	Comparison of Autogiro Performance with the Helicopter	708
12.11	Airfoils for Autogiros	709
12.12	NACA Research on Autogiros	710
12.13	Giving Better Control: Orientable Rotors	712
12.14	Improving Performance: Jump and Towering Takeoffs	713
12.15	Ground and Air Resonance	715
12.16	Helicopters Eclipse Autogiros	716
12.17	Renaissance of the Autogiro?	717
12.18	Chapter Review	719
12.19	Questions	720
	Bibliography	720
