

Introduction to

Food Engineering

3rd Edition

R Paul Singh
Dennis R Heldman

Food Science and Technology, International Series

Contents

About the authors	v
Foreword	vii
Preface	ix

CHAPTER 1 Introduction

1.1 Dimensions	1
1.2 Engineering Units	2
1.2.1 Base Units	2
1.2.2 Derived Units	3
1.2.3 Supplementary Units	5
1.3 System	9
1.4 State of a System	10
1.4.1 Extensive Properties	11
1.4.2 Intensive Properties	12
1.5 Density	12
1.6 Concentration	14
1.7 Moisture Content	15
1.8 Temperature	18
1.9 Pressure	20
1.10 Enthalpy	21
1.11 Equation of State and Perfect Gas Law	24
1.12 Phase Diagram of Water	24
1.13 Conservation of Mass	26
1.13.1 Conservation of Mass for an Open System	28
1.13.2 Conservation of Mass for a Closed System	29
1.14 Material Balances	29
1.15 Thermodynamics	37
1.16 Laws of Thermodynamics	38
1.17 Energy	40

1.18 Energy Balance	41
1.19 Energy Balance for a Closed System	42
1.19.1 Heat.	42
1.19.2 Work	43
1.20 Energy Balance for an Open System	51
1.20.1 Energy Balance for Steady Flow Systems	52
1.21 A Total Energy Balance	52
1.22 Power	55
1.23 Area.	55
1.24 Dynamic Response Characteristics of Sensors	56
Problems	60
List of Symbols	61
Bibliography	62

CHAPTER 2

Fluid Flow in Food Processing

2.1 Liquid Transport Systems.	64
2.1.1 Pipes for Processing Plants	65
2.1.2 Types of Pumps	66
2.2 Properties of Liquids	69
2.2.1 Terminology Used in Material Response to Stress.	69
2.2.2 Density	70
2.2.3 Viscosity	71
2.3 Handling Systems for Newtonian Liquids.	78
2.3.1 The Continuity Equation.	79
2.3.2 Reynolds Number.	81
2.3.3 Entrance Region and Fully Developed Flow.	85
2.3.4 Velocity Profile in a Liquid Flowing under Fully Developed Flow Conditions	87
2.3.5 Forces due to Friction.	92
2.4 Force Balance on a Fluid Element Flowing in a Pipe – Derivation of Bernoulli Equation.	96
2.5 Energy Equation for Steady Flow of Fluids	103
2.5.1 Pressure Energy	106
2.5.2 Kinetic Energy	106
2.5.3 Potential Energy.	108
2.5.4 Frictional Energy Loss	108
2.5.5 Power Requirements of a Pump.	110
2.6 Pump Selection and Performance Evaluation	115
2.6.1 Centrifugal Pumps	115
2.6.2 Head	116
2.6.3 Pump Performance Characteristics.	118

2.6.4	Pump Characteristic Diagram	121
2.6.5	Net Positive Suction Head	122
2.6.6	Selecting a Pump for a Liquid Transport System.	125
2.6.7	Affinity Laws	130
2.7	Flow Measurement	131
2.7.1	The Pitot Tube.	135
2.7.2	The Orifice Meter	138
2.7.3	The Venturi Meter	141
2.7.4	Variable Area Meters	142
2.7.5	Other Measurement Methods	143
2.8	Measurement of Viscosity	144
2.8.1	Capillary Tube Viscometer	144
2.8.2	Rotational Viscometer.	146
2.8.3	Influence of Temperature on Viscosity	148
2.9	Flow Characteristics of New-Newtonian Fluids	151
2.9.1	Properties of Non-Newtonian Fluids	151
2.9.2	Velocity Profile of a Power Law Fluid	157
2.9.3	Volumetric Flow Rate of a Power Law Fluid	157
2.9.4	Average Velocity in a Power Law Fluid	158
2.9.5	Friction Factor and Generalized Reynolds Number for Power Law Fluids	158
2.9.6	Computation of Pumping Requirement of Non-Newtonian Liquids.	161
	Problems	164
	List of Symbols	166
	Bibliography	168

CHAPTER 3

Energy for Food Processing

3.1	Generation of Steam	171
3.1.1	Steam Generation Systems	172
3.1.2	Thermodynamics of Phase Change.	174
3.1.3	Steam Tables	178
3.1.4	Steam Utilization	184
3.2	Fuel Utilization	188
3.2.1	Systems	189
3.2.2	Mass and Energy Balance Analysis	190
3.2.3	Burner Efficiencies	191
3.3	Electric Power Utilization.	193
3.3.1	Electrical Terms and Units	195
3.3.2	Ohm's Law	196
3.3.3	Electric Circuits	197

3.3.4	Electric Motors.	199
3.3.5	Electrical Controls	200
3.3.6	Electric Lighting.	201
	Problems	202
	List of Symbols	204
	Bibliography	205

CHAPTER 4

Heat Transfer in Food Processing

4.1	Systems for Heating and Cooling Food Products	208
4.1.1	Plate Heat Exchanger	208
4.1.2	Tubular Heat Exchanger.	212
4.1.3	Scraped-Surface Heat Exchanger	213
4.1.4	Steam-Infusion Heat Exchanger.	215
4.1.5	Epilogue.	215
4.2	Thermal Properties of Food	216
4.2.1	Specific Heat	216
4.2.2	Thermal Conductivity	219
4.2.3	Thermal Diffusivity.	221
4.3	Modes of Heat Transfer.	222
4.3.1	Conductive Heat Transfer	223
4.3.2	Convective Heat Transfer	225
4.3.3	Radiation Heat Transfer	227
4.4	Steady-State Heat Transfer	229
4.4.1	Conductive Heat Transfer in a Rectangular Slab.	230
4.4.2	Conductive Heat Transfer through a Tubular Pipe.	233
4.4.3	Heat Conduction in Multilayered Systems . . .	235
4.4.4	Estimation of Convective Heat-Transfer Coefficient	243
4.4.5	Estimation of Overall Heat-Transfer Coefficient	258
4.4.6	Role of Insulation in Reducing Heat Loss from Process Equipment	262
4.4.7	Design of a Tubular Heat Exchanger	267
4.4.8	Importance of Surface Characteristics in Radiative Heat Transfer	275
4.4.9	Radiative Heat Transfer between Two Objects.	276
4.5	Unsteady-State Heat Transfer.	280
4.5.1	Importance of External vs Internal Resistance to Heat Transfer.	282

4.5.2	Negligible Internal Resistance to Heat Transfer ($N_{Bi} < 0.1$) – A Lumped System Analysis.	283
4.5.3	Finite Internal and Surface Resistance to Heat Transfer ($0.1 < N_{Bi} < 40$)	287
4.5.4	Negligible Surface Resistance to Heat Transfer ($N_{Bi} > 40$)	291
4.5.5	Finite Objects.	291
4.5.6	Procedures to Use Temperature–Time Charts.	292
4.5.7	Use of f_h and j Factors in Predicting Temperature in Transient Heat Transfer	300
4.6	Microwave Heating	306
4.6.1	Mechanisms of Microwave Heating	307
4.6.2	Dielectric Properties	308
4.6.3	Conversion of Microwave Energy into Heat	309
4.6.4	Penetration Depth of Microwaves	310
4.6.5	Microwave Oven	311
4.6.6	Microwave Heating of Foods	312
	Problems	314
	List of Symbols	327
	Bibliography	329

CHAPTER 5

Preservation Processes

5.1	Microbial Survivor Curves	333
5.2	Influence of External Agents	336
5.3	Thermal Death Time F	339
5.4	Spoilage Probability	340
5.5	General Method for Process Calculation	341
5.5.1	Applications to Pasteurization.	343
5.5.2	Commercial Sterilization.	345
5.5.3	Aseptic Processing and Packaging	348
5.6	Mathematical Methods	357
	Problems	361
	List of Symbols	363
	Bibliography	364

CHAPTER 6

Refrigeration

6.1	Selection of a Refrigerant.	368
6.2	Components of a Refrigeration System	371
6.2.1	Evaporator	372

6.2.2	Compressor	374
6.2.3	Condenser	377
6.2.4	Expansion Valve	378
6.3	Pressure–Enthalpy Charts	381
6.3.1	Pressure–Enthalpy Tables	385
6.3.2	Use of Computer-Aided Procedures to Determine Thermodynamic Properties of Refrigerants	386
6.4	Mathematical Expressions Useful in Analysis of Vapor-Compression Refrigeration	387
6.4.1	Cooling Load	387
6.4.2	Compressor	389
6.4.3	Condenser	390
6.4.4	Evaporator	390
6.4.5	Coefficient of Performance	390
6.4.6	Refrigerant Flow Rate	491
6.5	Use of multistage Systems	400
6.5.1	Flash Gas Removal System	400
	Problems	404
	List of Symbols	407
	Bibliography	408

CHAPTER 7

Food Freezing

7.1	Freezing Systems	410
7.1.1	Indirect Contact Systems	410
7.1.2	Direct-Contact Systems	414
7.2	Frozen-Food Properties	418
7.2.1	Density	418
7.2.2	Thermal Conductivity	418
7.2.3	Enthalpy	419
7.2.4	Apparent Specific Heat	419
7.2.5	Apparent Thermal Diffusivity	420
7.3	Freezing Time	421
7.3.1	Plank’s Equation	423
7.3.2	Other Freezing-Time Prediction Methods	426
7.3.3	Pham’s Methods to Predict Freezing Time	427
7.3.4	Prediction of Freezing Time of Finite-Shaped Objects	430
7.3.5	Experimental Measurement of Freezing Time	434
7.3.6	Factors Influencing Freezing Time	435
7.3.7	Freezing Rate	435
7.3.8	Thawing Time	435

7.4 Frozen-Food Storage	436
7.4.1 Quality Changes in Foods during Frozen Storage	437
Problems	440
List of Symbols	443
Bibliography	444

CHAPTER 8

Evaporation

8.1 Boiling-Point Elevation	449
8.2 Types of Evaporators	451
8.2.1 Batch-Type Pan Evaporator	451
8.2.2 Natural Circulation Evaporators	452
8.2.3 Rising-Film Evaporator	452
8.2.4 Falling-Film Evaporator	453
8.2.5 Rising/Falling-Film Evaporator	454
8.2.6 Forced-Circulation Evaporator	454
8.2.7 Agitated Thin-Film Evaporator	455
8.3 Design of a Single-Effect Evaporator	457
8.4 Design of a Multiple-Effect Evaporator	462
8.5 Vapor Recompression Systems	468
8.5.1 Thermal Recompression	468
8.5.2 Mechanical Vapor Recompression	468
Problems	470
List of Symbols	471
Bibliography	472

CHAPTER 9

Psychrometries

9.1 Properties of Dry Air	473
9.1.1 Composition of Air	473
9.1.2 Specific Volume of Dry Air	474
9.1.3 Specific Heat of Dry Air	474
9.1.4 Enthalpy of Dry Air	474
9.1.5 Dry Bulb Temperature	475
9.2 Properties of Water Vapor	475
9.2.1 Specific Volume of Water Vapor	475
9.2.2 Specific Heat of Water Vapor	475
9.2.3 Enthalpy of Water vapor	476
9.3 Properties of Air-Vapor Mixtures	476
9.3.1 Gibbs-Dalton Law	476
9.3.2 Dew-Point Temperature	476

9.3.3	Humidity Ratio (or Moisture Content)	477
9.3.4	Relative Humidity	478
9.3.5	Humid Heat of an Air–Water Vapor Mixture	478
9.3.6	Specific Volume	479
9.3.7	Adiabatic Saturation of Air	479
9.3.8	Wet Bulb Temperature	481
9.4	The Psychrometric Chart	484
9.4.1	Construction of the Chart	484
9.4.2	Use of Psychrometric Chart to Evaluate Complex Air-Conditioning Processes	486
	Problems	491
	List of Symbols	494
	Bibliography	495

CHAPTER 10

Mass Transfer

10.1	The Diffusion Process	498
10.1.1	Steady-State Diffusion of Gases (and Liquids) through Solids	500
10.1.2	Convective Mass Transfer	502
10.1.3	Laminar Flow Past a Flat Plate	505
10.1.4	Turbulent Flow Past a Flat Plate	509
10.1.5	Laminar Flow in a Pipe	509
10.1.6	Turbulent Flow in a Pipe	510
10.1.7	Mass Transfer for Flow over Spherical Objects	510
10.2	Unsteady-State Mass Transfer	511
10.2.1	Transient-State Diffusion	513
10.2.2	Diffusion of Gases	517
10.3	Mass Transfer in Packaging Materials	520
10.3.1	Permeability of Packaging Materials to “Fixed” Gases	522
	Problems	525
	List of Symbols	527
	Bibliography	528

CHAPTER 11

Membrane Separation

11.1	Electrodialysis Systems	531
11.2	Reverse Osmosis Membrane Systems	534
11.3	Membrane Performance	541
11.4	Ultrafiltration Membrane Systems	542

11.5 Concentration Polarization	543
11.6 Types of Reverse-Osmosis and Ultrafiltration Systems	549
Problems	553
List of Symbols	554
Bibliography	555

CHAPTER 12

Dehydration

12.1 Basic Drying Processes	557
12.1.1 Water Activity	558
12.1.2 Moisture Diffusion	561
12.1.3 Drying-Rate Curves	561
12.1.4 Heat and Mass Transfer	562
12.2 Dehydration Systems	563
12.2.1 Tray or Cabinet Dryers	564
12.2.2 Tunnel Dryers	565
12.2.3 Puff-Drying	566
12.2.4 Fluidized-Bed Drying	566
12.2.5 Spray Drying	566
12.2.6 Freeze-Drying	567
12.3 Dehydration System Design	568
12.3.1 Mass and Energy Balance	568
12.3.2 Drying-Time Prediction	573
Problems	584
List of Symbols	588
Bibliography	589

Appendices

A.1 SI System of Units and Conversion Factors	591
A.1.1 Rules for Using SI Units	591
Table A.1.1: SI Prefixes	591
Table A.1.2: Useful Conversion Factors	594
Table A.1.3: Conversion Factors for Pressure	596
A.2 Physical Properties of Foods	597
Table A.2.1: Specific Heats of Foods	597
Table A.2.2: Thermal Conductivity of Selected Food Products	598
Table A.2.3: Thermal Diffusivity of Some Foodstuffs	600
Table A.2.4: Viscosity of Liquid Foods	601
Table A.2.5: Properties of Ice as a Function of Temperature	601

Table A.2.6: Approximate Heat Evolution Rates of Fresh Fruits and Vegetables When Stored at Temperatures Shown	602
Table A.2.7: Enthalpy of Frozen Foods	603
Table A.2.8: Composition Values of Selected Foods	604
Table A.2.9: Coefficients to Estimate Food Properties	605
A.3 Physical Properties of Nonfood Materials	606
Table A.3.1: Physical Properties of Metals	606
Table A.3.2: Physical Properties of Nonmetals	608
Table A.3.3: Emissivity of Various Surfaces	609
A.4 Physical Properties of Water and Air	611
Table A.4.1: Physical Properties of Water at the Saturation Pressure	611
Table A.4.2: Properties of Saturated Steam.	612
Table A.4.3: Properties of Superheated Steam (Steam Table)	613
Table A.4.4: Properties of Dry Air at Atmospheric Pressure	614
A.5 Psychrometric Charts.	615
Figure A.5.1: Psychrometric chart for high temperatures.	615
Figure A.5.2: Psychrometric chart for low temperatures.	616
A.6 Pressure–Enthalpy Data.	617
Figure A.6.1: Pressure–enthalpy diagram for Refrigerant 12	617
Table A.6.1: Properties of Saturated Liquid and Vapor R-12	618
Figure A.6.2: Pressure–enthalpy diagram of superheated R-12 vapor	620
Table A.6.2: Properties of Saturated Liquid and Vapor R-717 (Ammonia).	621
Figure A.6.3: Pressure–enthalpy diagram of superheated R-717 (ammonia) vapor	623
Table A.6.3: Properties of Saturated Liquid and Vapor R-134a.	624
Figure A.6.4: Pressure–enthalpy diagram of R-134a.	626
Figure A.6.5: Pressure–enthalpy diagram of R-134a (expanded scale)	627
A.7 Symbols for Use in Drawing Food Engineering Process Equipment	628
A.8 Miscellaneous	633
Table A.8.1: Numerical Data, and Area/Volume of Objects	633

Figure A.8.1: Temperature at geometric center of a sphere (expanded scale)	634
Figure A.8.2: Temperature at the axis of an infinitely long cylinder (expanded scale)	635
Figure A.8.3: Temperature at the midplane of an infinite slab (expanded scale)	636
Bibliography	637
Index	639
