

FOOD ENGINEERING SERIES

Electronic Irradiation of Foods

An Introduction
to the Technology

R. B. MILLER

 Springer

Contents

1	Introduction to Food Irradiation	1
1.1.	Elementary Radiation Chemistry	2
1.2.	Effects of Ionizing Radiation on Biological Organisms	3
1.2.1.	Organisms of Interest	3
1.2.2.	Effects of Ionizing Radiation	4
1.2.3.	Minimum Required Dose	8
1.3.	Effects of Ionizing Radiation on Food Components	8
1.3.1.	Carbohydrates	8
1.3.2.	Proteins	9
1.3.3.	Lipids	10
1.3.4.	Vitamins	10
1.3.5.	Summary of the Effects of Ionizing Radiation on Foods	11
1.4.	Applications of Food Irradiation	11
1.4.1.	Low-Dose (<1 kGy) Applications	11
1.4.2.	Medium-Dose (1–10 kGy) Applications	13
1.4.3.	High-Dose (>10 kGy) Food Sterilization	14
1.5.	Summary	14
2	Overview of Food Irradiation Technology and Concepts	17
2.1.	Description of Key Systems	17
2.1.1.	Accelerator System	18
2.1.2.	Beam Scanning System	20
2.1.3.	Material Handling System	21
2.2.	Key Food Processing Concepts and Parameters	23
2.2.1.	Dose Uniformity and Utilization Efficiency for Electron Beams	23
2.2.2.	Dose Uniformity and Utilization Efficiency for X-Rays	26
2.2.3.	Dose and Dose Rate Estimation	30
2.2.4.	Throughput Estimates for Electrons and X-Rays	33
2.3.	Cost Analyses and Unit Pricing	34
2.3.1.	Elements of Fixed Cost	35
2.3.2.	Elements of Variable Cost	36
2.3.3.	Breakeven Unit Pricing	37
2.4.	System Analysis and Technology Selection	38
2.5.	Process Validation	41
2.6.	Summary	41
3	Food Irradiation Using Electron Beams	43
3.1.	Electron Interactions in Matter	43
3.1.1.	Inelastic Scattering from Atomic Electrons	43

3.1.2. Secondary Electron Generation	45
3.1.3. Multiple Nuclear Scattering	45
3.1.4. Bremsstrahlung Radiation	46
3.1.5. Stopping Power, Energy Straggling and CSDA Range	47
3.2. Energy Deposition Profiles	48
3.3. Max:Min Ratios and Energy Utilization Efficiency	52
3.3.1. Single-Sided Irradiation	52
3.3.2. Double-Sided Irradiation	55
3.4. Electron Beam Irradiation of Irregular Products	56
3.4.1. Products of Irregular but Consistent Shape	57
3.4.2. Products with Random Variations in Areal Density	63
3.5. Front Surface Dose Uniformity	68
3.6. Air-Product Interfaces	71
3.7. Summary	72
4 Food Irradiation Using X-Rays	75
4.1. X-Ray Interaction Processes	75
4.1.1. Photoelectric Effect	75
4.1.2. Compton Scattering	76
4.1.3. Pair Production	78
4.1.4. Attenuation and Absorption Coefficients	79
4.2. Converter Optimization	80
4.2.1. Thick-Target Bremsstrahlung Yield	81
4.2.2. Monte Carlo Simulation Results	82
4.3. Characterization of the Free-Field Irradiation Zone	88
4.4. X-Ray Energy Deposition Profiles	93
4.4.1. One-Dimensional X-Ray Energy Deposition	93
4.4.2. Three-Dimensional X-Ray Energy Deposition Profiles	95
4.5. Max:Min Ratios and X-Ray Energy Utilization Efficiency	98
4.5.1. Single-pass, Two-gun Configuration	100
4.5.2. Double-pass, Two-gun Configuration	101
4.6. Throughput Efficiency Estimates for X-Ray Processing	103
4.7. Throughput Efficiency Improvements at 5 MeV	106
4.7.1. Overscanning	106
4.7.2. Increased Height of Both Product and Source	108
4.7.3. Converging/Diverging Beams	109
4.7.4. Weighting	110
4.7.5. Efficiency Enhancement Summary for 5 MeV	112
4.8. Throughput Efficiency Enhancements at 7.5 MeV	112
4.8.1. Overscanning for Various Product Heights	112
4.8.2. Converging/Diverging Beams	114
4.8.3. Weighting	114
4.8.4. Efficiency Enhancement Summary for 7.5 MeV	114
4.8.5. Depth-Dose Profiles at 7.5 MeV	115
4.9. Pallet Processing Concepts	117
4.10. Summary	119
5 Overview of Electron Accelerator Systems	123
5.1. General Considerations and Requirements	123

5.1.1. Penetration Depth and Kinetic Energy Considerations	123
5.1.2. Throughput and Average Power	124
5.1.3. Capital and Operating Costs	124
5.1.4. Size and Shielding	124
5.1.5. Maintenance and Downtime	125
5.2. Accelerator System Approaches	125
5.2.1. Direct Acceleration Methods	125
5.2.2. Induction Acceleration Methods	127
5.2.3. Microwave Acceleration Approaches	130
5.2.4. Comparison of Accelerator Approaches for Food Irradiation Applications	134
5.3. Summary	135
6 Principles of Electron Acceleration in Microwave Accelerators	137
6.1. Electron Acceleration	137
6.1.1. Acceleration in a Constant, Uniform Electric Field	138
6.1.2. Acceleration in Oscillating Fields	139
6.2. Electron Beam Generation	140
6.2.1. Thermionic Emission	141
6.2.2. Space-Charge-Limited Operation	142
6.2.3. Electron Gun Design	143
6.3. Resonant Electromagnetic Cavities	143
6.3.1. Maxwell's Equations	144
6.3.2. Normal Modes of a Pillbox Cavity	146
6.3.3. Circuit Model of a Resonant Cavity	148
6.3.4. Accelerating Cavity Design Issues	151
6.4. Multiple-Cavity Accelerating Structures	152
6.4.1. Comparisons of TW and SW Structures	152
6.4.2. Inductively-Coupled Linac Structures	153
6.5. Coupling to Resonant Accelerator Structures	159
6.5.1. Coupling with Minimal Beam Loading	160
6.5.2. Optimum Coupling with Beam Loading	161
6.5.3. Measurement of the Coupling Parameter	163
6.5.4. Load Line of a SW Structure	164
6.6. Single-Cavity RF Accelerators	165
6.7. Multiple-Cavity RF Accelerators	167
6.8. Summary	172
7 Microwave Accelerator Subsystems and Components	173
7.1. RF and Microwave Power Sources	173
7.1.1. Magnetrons	174
7.1.2. Klystrons	175
7.1.3. RF Power Tubes	176
7.2. Pulse Modulator Systems	179
7.2.1. Conventional Line-Type Modulator	179
7.2.2. Current-Fed Solid State Modulator	180
7.3. Microwave Engineering Components	181
7.3.1. RF Transmission Waveguide	182
7.3.2. Waveguide Windows	184

7.3.3. Directional Couplers	185
7.3.4. Circulators	185
7.3.5. Water Loads	187
7.3.6. Arc Detector	188
7.4. Automatic Frequency Control System	188
7.5. Auxiliary Systems	189
7.5.1. Water Cooling System	189
7.5.2. Vacuum System	190
7.5.3. Pressurized SF ₆ System	191
7.5.4. Exit Window Cooling	192
7.6. Summary	192
8 Magnetic Transport and Beam Scanning Systems	195
8.1. Electron Motion in a Uniform Dipole Magnetic Field	195
8.1.1. Design of a Simple Dipole Magnet	197
8.2. Beam Transport in a Solenoidal Magnetic Field	197
8.2.1. Beam Envelope Equation	198
8.2.2. Solenoidal Magnetic Lens	200
8.3. Beam Transport in a Magnetic Quadrupole Lens	201
8.4. Beam Scanning and Transport Applications	202
8.4.1. Beam Scanning	202
8.4.2. Non-Linear Scan Waveforms (S-Shaped Curves) for X-Ray Irradiation	204
8.4.3. Beam Trajectory Control at the Scan Horn Exit	205
8.4.4. Combined Beam Splitter / Beam Scanner Concept	209
8.4.5. Alternative Pallet Irradiation Concept	209
8.5. Summary	211
9 Material Handling Systems and Components	213
9.1. Material Handling Systems Requirements	213
9.1.1. Radiation Mode	215
9.1.2. Throughput Requirements	216
9.1.3. Radiation Shielding and Ozone Considerations	217
9.2. Conveyor Systems	217
9.2.1. Floor-Mounted Conveyor Systems	218
9.2.2. Overhead Trolley Conveyors	223
9.3. Miscellaneous Material Handling System Components	225
9.4. Computer-Assisted Process Control	226
9.5. Representative Material Handling System Examples	226
9.5.1. Electron Beam Irradiation of Ground Beef	226
9.5.2. X-Ray Irradiation of Boxes of Whole Chickens	228
9.5.3. X-Ray Irradiation of Pallets of Chicken	230
9.6. Summary	231
10 Radiation Safety and X-Ray Shield Design	233
10.1. General Safety Considerations for a Food Irradiation Installation	233
10.1.1. Non-Radiation Hazards	233
10.1.2. Radiation Hazard Considerations	233
10.1.3. Radiation Exposure Terms	234

10.1.4.Radiation Dose Limits	235
10.2.Radiation Shielding Estimation	235
10.2.1.X-Ray Shielding Estimation Procedure for Electron Accelerators	236
10.2.2.Description of X-Ray Sources	237
10.2.3.Shielding Transmission Ratios (Tenth-Value Layers)	239
10.2.4.Reflected X-Ray Sources	240
10.3.Shielding Calculation Examples	242
10.3.1.Shield Design for a 10-MeV Direct Electron Irradiation Facility	242
10.3.2.Shield Design for a 5-MeV X-Ray Irradiation Facility	244
10.4.Auxiliary Radiation Protection Systems and Practices	246
10.5.Summary	247
11 Critical System Parameters and Process Control	249
11.1.Critical Process Parameters	249
11.2.Variation of the Depth-Dose Profile with Kinetic Energy for Electron Beam Processing	250
11.2.1.Single-Sided Irradiation	252
11.2.2.Double-Sided Irradiation	254
11.3.Energy Control	256
11.4.Dose Control	257
11.4.1.Direct Electron Irradiation	257
11.4.2.Indirect X-Ray Irradiation	258
11.5.Dose and Energy Variation with Modulator Voltage	258
11.6.Dose Variations Resulting from a Process Interrupt	260
11.7.Summary	262
Appendix A: Dosimetry Techniques	265
Appendix B: Electron Kinetic Energy Measurements Using Thin Film Dosimeters	275
Appendix C: Induced Radioactivity in Food by Electron and X-Ray Irradiation	279
Appendix D: Ozone Generation by Ionizing Radiation	289
Index	293
