

$\mu_i - \sum_{j=1}^n \delta_{ij} \wedge F_j$

TOMAS BJÖRK

Arbitrage Theory in Continuous Time

second edition

OXFORD

FINANCE

CONTENTS

1	Introduction	1
1.1	Problem Formulation	1
2	The Binomial Model	5
2.1	The One Period Model	5
2.1.1	Model Description	5
2.1.2	Portfolios and Arbitrage	6
2.1.3	Contingent Claims	9
2.1.4	Risk Neutral Valuation	11
2.2	The Multiperiod Model	15
2.2.1	Portfolios and Arbitrage	15
2.2.2	Contingent Claims	17
2.3	Exercises	25
2.4	Notes	25
3	A More General One Period Model	26
3.1	The Model	26
3.2	Absence of Arbitrage	27
3.3	Martingale Pricing	30
3.4	Completeness	31
3.5	Stochastic Discount Factors	34
3.6	Exercises	35
4	Stochastic Integrals	36
4.1	Introduction	36
4.2	Information	38
4.3	Stochastic Integrals	40
4.4	Martingales	42
4.5	Stochastic Calculus and the Itô Formula	45
4.6	Examples	50
4.7	The Multidimensional Itô Formula	53
4.8	Correlated Wiener Processes	55
4.9	Exercises	59
4.10	Notes	61
5	Differential Equations	62
5.1	Stochastic Differential Equations	62
5.2	Geometric Brownian Motion	63
5.3	The Linear SDE	66
5.4	The Infinitesimal Operator	67

5.5	Partial Differential Equations	68
5.6	The Kolmogorov Equations	72
5.7	Exercises	75
5.8	Notes	79
6	Portfolio Dynamics	80
6.1	Introduction	80
6.2	Self-financing Portfolios	83
6.3	Dividends	85
6.4	Exercise	87
7	Arbitrage Pricing	88
7.1	Introduction	88
7.2	Contingent Claims and Arbitrage	89
7.3	The Black–Scholes Equation	94
7.4	Risk Neutral Valuation	98
7.5	The Black–Scholes Formula	100
7.6	Options on Futures	102
	7.6.1 Forward Contracts	102
	7.6.2 Futures Contracts and the Black Formula	103
7.7	Volatility	104
	7.7.1 Historic Volatility	105
	7.7.2 Implied Volatility	106
7.8	American options	106
7.9	Exercises	108
7.10	Notes	110
8	Completeness and Hedging	111
8.1	Introduction	111
8.2	Completeness in the Black–Scholes Model	112
8.3	Completeness—Absence of Arbitrage	117
8.4	Exercises	118
8.5	Notes	120
9	Parity Relations and Delta Hedging	121
9.1	Parity Relations	121
9.2	The Greeks	123
9.3	Delta and Gamma Hedging	126
9.4	Exercises	130
10	The Martingale Approach to Arbitrage Theory*	133
10.1	The Case with Zero Interest Rate	133
10.2	Absence of Arbitrage	136
	10.2.1 A Rough Sketch of the Proof	137
	10.2.2 Precise Results	140

10.3	The General Case	142
10.4	Completeness	145
10.5	<i>Martingale Pricing</i>	147
10.6	Stochastic Discount Factors	149
10.7	Summary for the Working Economist	150
10.8	Notes	153
11	The Mathematics of the Martingale Approach*	154
11.1	Stochastic Integral Representations	154
11.2	The Girsanov Theorem: Heuristics	158
11.3	The Girsanov Theorem	160
11.4	The Converse of the Girsanov Theorem	164
11.5	Girsanov Transformations and Stochastic Differentials	164
11.6	Maximum Likelihood Estimation	165
11.7	Exercises	167
11.8	Notes	168
12	Black–Scholes from a Martingale Point of View*	169
12.1	Absence of Arbitrage	169
12.2	Pricing	171
12.3	Completeness	172
13	Multidimensional Models: Classical Approach	175
13.1	Introduction	175
13.2	Pricing	177
13.3	Risk Neutral Valuation	183
13.4	Reducing the State Space	184
13.5	Hedging	188
13.6	Exercises	191
14	Multidimensional Models: Martingale Approach*	192
14.1	Absence of Arbitrage	193
14.2	Completeness	195
14.3	Hedging	196
14.4	Pricing	198
14.5	Markovian Models and PDEs	199
14.6	Market Prices of Risk	200
14.7	Stochastic Discount Factors	201
14.8	The Hansen–Jagannathan Bounds	201
14.9	Exercises	204
14.10	Notes	204
15	Incomplete Markets	205
15.1	Introduction	205
15.2	A Scalar Nonpriced Underlying Asset	205
15.3	The Multidimensional Case	214

15.4	A Stochastic Short Rate	218
15.5	The Martingale Approach*	219
15.6	Summing Up	220
15.7	Exercises	223
15.8	Notes	224
16	Dividends	225
16.1	Discrete Dividends	225
16.1.1	Price Dynamics and Dividend Structure	225
16.1.2	Pricing Contingent Claims	226
16.2	Continuous Dividends	231
16.2.1	Continuous Dividend Yield	232
16.2.2	The General Case	235
16.3	Exercises	237
17	Currency Derivatives	239
17.1	Pure Currency Contracts	239
17.2	Domestic and Foreign Equity Markets	242
17.3	Domestic and Foreign Market Prices of Risk	248
17.4	Exercises	252
17.5	Notes	253
18	Barrier Options	254
18.1	Mathematical Background	254
18.2	Out Contracts	256
18.2.1	Down-and-Out Contracts	256
18.2.2	Up-and-Out Contracts	260
18.2.3	Examples	261
18.3	In Contracts	265
18.4	Ladders	267
18.5	Lookbacks	268
18.6	Exercises	270
18.7	Notes	270
19	Stochastic Optimal Control	271
19.1	An Example	271
19.2	The Formal Problem	272
19.3	The Hamilton–Jacobi–Bellman Equation	275
19.4	Handling the HJB Equation	283
19.5	The Linear Regulator	284
19.6	Optimal Consumption and Investment	286
19.6.1	A Generalization	286
19.6.2	Optimal Consumption	288
19.7	The Mutual Fund Theorems	291
19.7.1	The Case with No Risk Free Asset	291
19.7.2	The Case with a Risk Free Asset	295

19.8 Exercises	297
19.9 Notes	301
20 Bonds and Interest Rates	302
20.1 Zero Coupon Bonds	302
20.2 Interest Rates	303
20.2.1 Definitions	303
20.2.2 Relations between $df(t, T)$, $dp(t, T)$, and $dr(t)$	305
20.2.3 An Alternative View of the Money Account	308
20.3 Coupon Bonds, Swaps, and Yields	309
20.3.1 Fixed Coupon Bonds	310
20.3.2 Floating Rate Bonds	310
20.3.3 Interest Rate Swaps	312
20.3.4 Yield and Duration	313
20.4 Exercises	314
20.5 Notes	315
21 Short Rate Models	316
21.1 Generalities	316
21.2 The Term Structure Equation	319
21.3 Exercises	324
21.4 Notes	325
22 Martingale Models for the Short Rate	326
22.1 Q -dynamics	326
22.2 Inversion of the Yield Curve	327
22.3 Affine Term Structures	329
22.3.1 Definition and Existence	329
22.3.2 A Probabilistic Discussion	331
22.4 Some Standard Models	333
22.4.1 The Vasicek Model	333
22.4.2 The Ho–Lee Model	334
22.4.3 The CIR Model	335
22.4.4 The Hull–White Model	335
22.5 Exercises	338
22.6 Notes	339
23 Forward Rate Models	340
23.1 The Heath–Jarrow–Morton Framework	340
23.2 Martingale Modeling	342
23.3 The Musiela Parameterization	344
23.4 Exercises	345
23.5 Notes	347
24 Change of Numeraire*	348
24.1 Introduction	348

24.2	Generalities	349
24.3	Changing the Numeraire	353
24.4	Forward Measures	355
24.4.1	Using the T -bond as Numeraire	355
24.4.2	An Expectation Hypothesis	357
24.5	A General Option Pricing Formula	358
24.6	The Hull–White Model	361
24.7	The General Gaussian Model	363
24.8	Caps and Floors	365
24.9	Exercises	366
24.10	Notes	366
25	LIBOR and Swap Market Models	368
25.1	Caps: Definition and Market Practice	369
25.2	The LIBOR Market Model	371
25.3	Pricing Caps in the LIBOR Model	372
25.4	Terminal Measure Dynamics and Existence	373
25.5	Calibration and Simulation	376
25.6	The Discrete Savings Account	378
25.7	Swaps	379
25.8	Swaptions: Definition and Market Practice	381
25.9	The Swap Market Models	382
25.10	Pricing Swaptions in the Swap Market Model	383
25.11	Drift Conditions for the Regular Swap Market Model	384
25.12	Concluding Comment	387
25.13	Exercises	388
25.14	Notes	388
26	Forwards and Futures	389
26.1	Forward Contracts	389
26.2	Futures Contracts	391
26.3	Exercises	394
26.4	Notes	394
A	Measure and Integration*	395
A.1	Sets and Mappings	395
A.2	Measures and Sigma Algebras	397
A.3	Integration	399
A.4	Sigma-Algebras and Partitions	404
A.5	Sets of Measure Zero	405
A.6	The L^p Spaces	406
A.7	Hilbert Spaces	407
A.8	Sigma-Algebras and Generators	410
A.9	Product measures	414
A.10	The Lebesgue Integral	415

A.11	The Radon–Nikodym Theorem	416
A.12	Exercises	419
A.13	Notes	421
B	Probability Theory*	422
B.1	Random Variables and Processes	422
B.2	Partitions and Information	425
B.3	Sigma-algebras and Information	427
B.4	Independence	430
B.5	Conditional Expectations	432
B.6	Equivalent Probability Measures	438
B.7	Exercises	441
B.8	Notes	442
C	Martingales and Stopping Times*	443
C.1	Martingales	443
C.2	Discrete Stochastic Integrals	446
C.3	Likelihood Processes	447
C.4	Stopping Times	448
C.5	Exercises	451
