<i>List of tables</i>	xiii
<i>List of figures</i>	xiv
<i>List of symbols</i>	xxi
<i>Preface</i>	xxvii
1 Introduction	1
1.1 <i>The historical context</i>	1
1.2 <i>The coastal environment</i>	3
1.2.1 <i>Context</i>	3
1.2.2 <i>Beach origins</i>	3
1.2.3 <i>Time and space scales</i>	4
1.2.4 <i>The action of waves on beaches</i>	4
1.2.5 <i>Coastal features</i>	5
1.2.6 <i>Natural bays and coastal cells</i>	6
1.2.7 <i>Coastal zone management principles</i>	11
1.2.8 <i>Coastal defence principles</i>	12
1.3 <i>Understanding coastal system behaviour</i>	13
1.3.1 <i>Introduction</i>	13
1.3.2 <i>Recognising shoreline types</i>	14
1.3.3 <i>Influences upon coastal behaviour</i>	16
1.3.4 <i>Generic questions</i>	17
1.4 <i>Scope</i>	19
2 Wave theory	21
2.1 <i>Introduction</i>	21
2.2 <i>Small-amplitude wave theory</i>	24
2.2.1 <i>Derivation of the Airy wave equations</i>	24
2.2.2 <i>Water particle velocities, accelerations and paths</i>	26
2.2.3 <i>Pressure variation induced by wave motion</i>	27
2.2.4 <i>The influence of water depth on wave characteristics</i>	28

- 2.2.5 *Group velocity and energy propagation* 29
- 2.2.6 *Radiation stress (momentum flux) theory* 31
- 2.3 *Wave transformation and attenuation processes* 32
 - 2.3.1 *Refraction* 32
 - 2.3.2 *Shoaling* 34
 - 2.3.3 *Combined refraction and shoaling* 36
 - 2.3.4 *Numerical solution of the wave dispersion equation* 38
 - 2.3.5 *Seabed friction* 39
 - 2.3.6 *Wave-current interaction* 40
 - 2.3.7 *The generalised refraction equations for numerical solution techniques* 42
 - 2.3.8 *The wave conservation equation in wave ray form* 42
 - 2.3.9 *Wave conservation equation and wave energy conservation equation in Cartesian coordinates* 45
 - 2.3.10 *Wave reflection* 45
 - 2.3.11 *Wave diffraction* 49
 - 2.3.12 *Combined refraction and diffraction* 52
- 2.4 *Finite amplitude waves* 53
- 2.5 *Wave forces* 54
- 2.6 *Surf zone processes* 56
 - 2.6.1 *A general description of the surf zone* 56
 - 2.6.2 *Wave breaking* 58
 - 2.6.3 *Wave set-down and set-up* 61
 - 2.6.4 *Radiation stress components for oblique waves* 63
 - 2.6.5 *Longshore currents* 63
 - 2.6.6 *Infragravity waves* 66
- Further reading* 68
- 3 Design wave specification** 69
 - 3.1 *Introduction* 69
 - 3.2 *Short-term wave statistics* 69
 - 3.2.1 *Time domain analysis* 69
 - 3.2.2 *Frequency domain analysis* 75
 - 3.3 *Directional wave spectra* 78
 - 3.4 *Wave energy spectra, the JONSWAP spectrum* 80
 - 3.4.1 *Bretschneider spectrum* 82
 - 3.4.2 *Pierson–Moskowitz spectrum* 83
 - 3.4.3 *JONSWAP spectrum* 84
 - 3.5 *Swell waves* 85
 - 3.6 *Prediction of deep-water waves* 86
 - 3.7 *Prediction of nearshore waves* 88

3.7.1	<i>Point prediction of wind-generated waves</i>	88
3.7.2	<i>The SMB method</i>	89
3.7.3	<i>The JONSWAP method</i>	90
3.7.4	<i>Further modifications and automated methods</i>	91
3.8	<i>The TMA spectrum</i>	93
3.9	<i>Numerical transformation of deep-water wave spectra</i>	95
3.9.1	<i>Spectral ray models</i>	96
3.9.2	<i>Mild-slope equation</i>	97
3.9.3	<i>Non-linear models</i>	99
3.10	<i>Long-term wave climate changes</i>	100
	<i>Further reading</i>	101
4	Coastal water level variations	102
4.1	<i>Introduction</i>	102
4.2	<i>Astronomical tide generation</i>	103
4.2.1	<i>Diurnal inequality</i>	106
4.2.2	<i>Tidal species</i>	107
4.2.3	<i>Spring-neap tidal variation</i>	108
4.2.4	<i>Tidal ratio</i>	109
4.3	<i>Tide data</i>	111
4.4	<i>Harmonic analysis</i>	113
4.5	<i>Numerical prediction of tides</i>	115
4.6	<i>Theory of long-period waves</i>	115
4.7	<i>Tidal flow modelling</i>	120
4.8	<i>Storm surge</i>	130
4.8.1	<i>Basic storm surge equations</i>	130
4.8.2	<i>Numerical forecasting of storm surge</i>	131
4.8.3	<i>Oscillations in simple basins</i>	133
4.9	<i>Tsunamis</i>	135
4.10	<i>Long-term water level changes</i>	137
4.10.1	<i>Climatic fluctuations</i>	137
4.10.2	<i>Eustatic component</i>	138
4.10.3	<i>Isostatic component</i>	139
4.10.4	<i>Global climate change</i>	139
	<i>Further reading</i>	141
5	Coastal transport processes	142
5.1	<i>Characteristics of coastal sediments</i>	142
5.2	<i>Sediment transport</i>	143
5.2.1	<i>Modes of transport</i>	143
5.2.2	<i>Description of the threshold of movement</i>	145
5.2.3	<i>Bedforms</i>	146
5.2.4	<i>Estimation of bed shear stress</i>	147
5.2.5	<i>The entrainment function (Shields parameter)</i>	151
5.2.6	<i>Bedload transport equations</i>	154

5.2.7	<i>A general description of the mechanics of suspended sediment transport</i>	156
5.2.8	<i>Suspended sediment concentration under currents</i>	160
5.2.9	<i>Suspended sediment concentration under waves and waves with currents</i>	165
5.2.10	<i>Total load transport formulae</i>	166
5.2.11	<i>Cross-shore transport on beaches</i>	171
5.2.12	<i>Longshore transport ('littoral drift')</i>	172
5.2.13	<i>Concluding notes on sediment transport</i>	179
	<i>Further reading</i>	179
6	Coastal morphology: analysis, modelling and prediction	181
6.1	<i>Introduction</i>	181
6.1.1	<i>Baseline review</i>	182
6.2	<i>Beach profiles</i>	185
6.2.1	<i>Analysis of beach profile measurements</i>	185
6.2.2	<i>The empirical orthogonal function technique</i>	185
6.2.3	<i>Other methods</i>	189
6.2.4	<i>Equilibrium profiles and the depth of closure</i>	191
6.2.5	<i>Numerical prediction of beach profile response</i>	192
6.3	<i>Beach plan shape</i>	198
6.3.1	<i>Plan shape measurements</i>	198
6.3.2	<i>Equilibrium forms</i>	200
6.3.3	<i>Beach plan shape evolution equation</i>	201
6.3.4	<i>Analytical solutions</i>	203
6.3.5	<i>Numerical solutions</i>	207
6.4	<i>Nearshore morphology</i>	212
6.4.1	<i>Introduction</i>	212
6.4.2	<i>EOF methods for beaches and the nearshore bathymetry</i>	214
6.4.3	<i>Combined wave, tide and sediment transport models</i>	216
6.5	<i>Long-term prediction</i>	217
6.5.1	<i>Limits on predictability</i>	217
6.5.2	<i>Probabilistic methods</i>	223
6.5.3	<i>Systems approach</i>	227
7	Design, reliability and risk	229
7.1	<i>Design conditions</i>	229
7.1.1	<i>Introduction</i>	229
7.1.2	<i>Extreme values and return period</i>	229
7.1.3	<i>Distribution of extreme values</i>	235
7.1.4	<i>Calculation of marginal extremes</i>	240
7.1.5	<i>Dependence and joint probability</i>	244

7.2	<i>Reliability and risk</i>	249
7.2.1	<i>Risk assessment</i>	249
7.2.2	<i>Structures, damage mechanisms and modes of failure</i>	257
7.2.3	<i>Assessing the reliability of structures</i>	263
7.2.4	<i>Level I methods</i>	266
7.2.5	<i>Level II methods</i>	267
7.2.6	<i>Level III methods</i>	274
7.2.7	<i>Accounting for dependence</i>	277
7.2.8	<i>Accounting for uncertainty</i>	282
8	Field measurements and physical models	284
8.1	<i>The need for field measurements and physical models</i>	284
8.2	<i>Field investigations</i>	285
8.3	<i>Theory of physical models</i>	300
8.3.1	<i>Generic model types</i>	300
8.3.2	<i>Similitude</i>	300
8.4	<i>Short-wave hydrodynamic models</i>	303
8.5	<i>Long-wave hydrodynamic models</i>	305
8.6	<i>Coastal sediment transport models</i>	305
9	Conceptual and detailed design	312
9.1	<i>The wider context of design</i>	312
9.2	<i>Coastal structures</i>	318
9.2.1	<i>Groynes</i>	322
9.2.2	<i>Shore-connected breakwaters</i>	330
9.2.3	<i>Detached breakwaters</i>	337
9.2.4	<i>Port and harbour breakwaters</i>	342
9.2.5	<i>Floating breakwaters</i>	347
9.2.6	<i>Sea walls</i>	348
9.2.7	<i>Sills</i>	351
9.3	<i>Natural coastal structures</i>	353
9.3.1	<i>Beach nourishment</i>	354
9.3.2	<i>Dune management</i>	356
9.3.3	<i>Tidal flats and marshes</i>	359
9.4	<i>Design guidance notes</i>	360
9.4.1	<i>Wave run-up</i>	361
9.4.2	<i>Wave overtopping and crest elevation</i>	362
9.4.3	<i>Armour slope stability</i>	373
9.4.4	<i>Crest and lee slope armour</i>	389
9.4.5	<i>Rock grading</i>	390
9.4.6	<i>Underlayers and internal stability</i>	391
9.4.7	<i>Crown walls</i>	397

xii Contents

9.4.8	<i>Scour and toe stability</i>	398
9.4.9	<i>Design of sea walls</i>	406
9.4.10	<i>Beach nourishment design</i>	408
9.5	<i>Design example</i>	413
<i>References</i>		421
<i>Appendix A</i>	<i>Summary of statistical concepts and terminology</i>	439
<i>Appendix B</i>	<i>Maximum likelihood estimation</i>	445
<i>Appendix C</i>	<i>Harmonic analysis results</i>	451
<i>Index</i>		453
