

THIRD EDITION

Composite Structures of Steel and Concrete

Beams, Slabs, Columns, and Frames for Buildings

R. P. Johnson

**Blackwell
Publishing**

Contents

<i>Preface</i>	x
<i>Symbols, terminology and units</i>	xiii
Chapter 1 Introduction	1
1.1 Composite beams and slabs	1
1.2 Composite columns and frames	2
1.3 Design philosophy and the Eurocodes	3
1.3.1 Background	3
1.3.2 Limit state design philosophy	5
Basis of design, and actions	5
Resistances	7
Combinations of actions	8
Comments on limit state design philosophy	9
1.4 Properties of materials	10
1.5 Direct actions (loading)	13
1.6 Methods of analysis and design	14
Chapter 2 Shear connection	20
2.1 Introduction	20
2.2 Simply-supported beam of rectangular cross-section	21
2.2.1 No shear connection	22
2.2.2 Full interaction	24
2.3 Uplift	26
2.4 Methods of shear connection	26
2.4.1 Bond	26
2.4.2 Shear connectors	27
2.4.3 Shear connection for profiled steel sheeting	29
2.5 Properties of shear connectors	29
2.5.1 Stud connectors used with profiled steel sheeting	34
2.6 Partial interaction	35
2.7 Effect of slip on stresses and deflections	37

2.8	Longitudinal shear in composite slabs	40
2.8.1	The $m-k$ or shear-bond test	40
Chapter 3 Simply-supported composite slabs and beams		44
3.1	Introduction	44
3.2	Example: layout, materials and loadings	44
3.3	Composite floor slabs	47
3.3.1	Resistance of composite slabs to sagging bending	48
3.3.2	Resistance of composite slabs to longitudinal shear	52
3.3.3	Resistance of composite slabs to vertical shear	54
3.3.4	Punching shear	55
3.3.5	Bending moments from concentrated point and line loads	56
3.3.6	Serviceability limit states for composite slabs	58
3.3.7	Fire resistance	59
	Partial safety factors for fire	60
	Design action effects for fire	60
	Thermal properties of materials	61
	Design methods for resistance to fire	61
	Simple calculation model for unprotected composite slab	62
3.4	Example: composite slab	64
3.4.1	Profiled steel sheeting as shuttering	65
3.4.2	Composite slab – flexure and vertical shear	66
3.4.3	Composite slab – longitudinal shear	68
3.4.4	Local effects of point load	70
3.4.5	Composite slab – serviceability	72
3.4.6	Composite slab – fire design	73
3.4.7	Comments on the design of the composite slab	75
3.5	Composite beams – sagging bending and vertical shear	75
3.5.1	Effective cross-section	76
3.5.2	Classification of steel elements in compression	77
3.5.3	Resistance to sagging bending	79
	Cross-sections in Class 1 or 2	79
	Cross-sections in Class 3 or 4	85
3.5.4	Resistance to vertical shear	85
3.6	Composite beams – longitudinal shear	86
3.6.1	Critical lengths and cross-sections	86
3.6.2	Ductile and non-ductile connectors	88
3.6.3	Transverse reinforcement	89
	Design rules for transverse reinforcement in solid slabs	91

Transverse reinforcement in composite slabs	92
3.6.4 Detailing rules	93
3.7 Stresses, deflections and cracking in service	94
3.7.1 Elastic analysis of composite sections in sagging bending	96
3.7.2 The use of limiting span-to-depth ratios	98
3.8 Effects of shrinkage of concrete and of temperature	99
3.9 Vibration of composite floor structures	100
3.9.1 Prediction of fundamental natural frequency	102
3.9.2 Response of a composite floor to pedestrian traffic	104
3.10 Fire resistance of composite beams	105
3.11 Example: simply-supported composite beam	107
3.11.1 Composite beam – full-interaction flexure and vertical shear	108
3.11.2 Composite beam – partial shear connection, and transverse reinforcement	111
3.11.3 Composite beam – deflection and vibration	115
Deflection	115
Vibration	118
3.11.4 Composite beam – fire design	120
Chapter 4 Continuous beams and slabs, and beams in frames	122
4.1 Introduction	122
4.2 Hogging moment regions of continuous composite beams	126
4.2.1 Classification of sections, and resistance to bending	126
General	126
Plastic moment of resistance	127
Elastic moment of resistance	130
4.2.2 Vertical shear, and moment-shear interaction	132
4.2.3 Longitudinal shear	133
4.2.4 Lateral buckling	134
Elastic critical moment	136
Buckling moment	139
Use of bracing	140
4.2.5 Cracking of concrete	140
No control of crack width	143
Control of restraint-induced cracking	143
Control of load-induced cracking	145
4.3 Global analysis of continuous beams	146
4.3.1 General	146
4.3.2 Elastic analysis	147

	Redistribution of moments in continuous beams	148
	Example: redistribution of moments	149
	Corrections for cracking and yielding	151
4.3.3	Rigid-plastic analysis	153
4.4	Stresses and deflections in continuous beams	155
4.5	Design strategies for continuous beams	155
4.6	Example: continuous composite beam	157
4.6.1	Data	157
4.6.2	Flexure and vertical shear	159
4.6.3	Lateral buckling	161
4.6.4	Shear connection and transverse reinforcement	164
4.6.5	Check on deflections	165
4.6.6	Control of cracking	168
4.7	Continuous composite slabs	169
Chapter 5 Composite columns and frames		170
5.1	Introduction	170
5.2	Composite columns	172
5.3	Beam-to-column joints	173
5.3.1	Properties of joints	173
5.3.2	Classification of joints	176
5.4	Design of non-sway composite frames	178
5.4.1	Imperfections	178
5.4.2	Elastic stiffnesses of members	181
5.4.3	Method of global analysis	181
5.4.4	First-order global analysis of braced frames	182
	Actions	182
	Eccentricity of loading, for columns	183
	Elastic global analysis	184
	Rigid-plastic global analysis	184
5.4.5	Outline sequence for design of a composite braced frame	185
5.5	Example: composite frame	186
5.5.1	Data	186
5.5.2	Design action effects and load arrangements	187
5.6	Simplified design method of EN 1994-1-1, for columns	189
5.6.1	Introduction	189
5.6.2	Fire resistance, and detailing rules	190
5.6.3	Properties of column lengths	191
	Relative slenderness	192
5.6.4	Resistance of a cross-section to combined compression and uni-axial bending	193
5.6.5	Verification of a column length	194

Design action effects, for uni-axial bending	194
Bi-axial bending	196
5.6.6 Transverse and longitudinal shear	196
5.6.7 Concrete-filled steel tubes	197
5.7 Example: external column	198
5.7.1 Action effects	198
5.7.2 Properties of the cross-section, and y-axis slenderness	199
5.7.3 Resistance of the column length, for major-axis bending	203
5.7.4 Resistance of the column length, for minor-axis bending	205
5.7.5 Checks on shear	207
5.8 Example (continued): internal column	208
5.9 Example (continued): design for horizontal forces	210
5.10 Example (continued): nominally-pinned joint to external column	213
Appendix A Partial-interaction theory	214
A.1 Theory for simply-supported beam	214
A.2 Example: partial interaction	217
