

CLASSICAL MECHANICS

R. DOUGLAS GREGORY

CAMBRIDGE

Contents

<i>Preface</i>	xi
1 Newtonian mechanics of a single particle	1
1 The algebra and calculus of vectors	3
1.1 Vectors and vector quantities	3
1.2 Linear operations: $\mathbf{a} + \mathbf{b}$ and $\lambda\mathbf{a}$	5
1.3 The scalar product $\mathbf{a} \cdot \mathbf{b}$	10
1.4 The vector product $\mathbf{a} \times \mathbf{b}$	13
1.5 Triple products	15
1.6 Vector functions of a scalar variable	16
1.7 Tangent and normal vectors to a curve	18
Problems	22
2 Velocity, acceleration and scalar angular velocity	25
2.1 Straight line motion of a particle	25
2.2 General motion of a particle	28
2.3 Particle motion in polar co-ordinates	32
2.4 Rigid body rotating about a fixed axis	36
2.5 Rigid body in planar motion	38
2.6 Reference frames in relative motion	40
Problems	43
3 Newton's laws of motion and the law of gravitation	50
3.1 Newton's laws of motion	50
3.2 Inertial frames and the law of inertia	52
3.3 The law of mutual interaction; mass and force	54
3.4 The law of multiple interactions	57
3.5 Centre of mass	58

3.6	The law of gravitation	59
3.7	Gravitation by a distribution of mass	60
3.8	The principle of equivalence and g	67
	Problems	71
4	Problems in particle dynamics	73
4.1	Rectilinear motion in a force field	74
4.2	Constrained rectilinear motion	78
4.3	Motion through a resisting medium	82
4.4	Projectiles	88
4.5	Circular motion	92
	Problems	98
5	Linear oscillations	105
5.1	Body on a spring	105
5.2	Classical simple harmonic motion	107
5.3	Damped simple harmonic motion	109
5.4	Driven (forced) motion	112
5.5	A simple seismograph	120
5.6	Coupled oscillations and normal modes	121
	Problems	126
6	Energy conservation	131
6.1	The energy principle	131
6.2	Energy conservation in rectilinear motion	133
6.3	General features of rectilinear motion	136
6.4	Energy conservation in a conservative field	140
6.5	Energy conservation in constrained motion	145
	Problems	151
7	Orbits in a central field	155
7.1	The one-body problem – Newton’s equations	157
7.2	General nature of orbital motion	159
7.3	The path equation	164
7.4	Nearly circular orbits	167
7.5	The attractive inverse square field	170
7.6	Space travel – Hohmann transfer orbits	177
7.7	The repulsive inverse square field	179
7.8	Rutherford scattering	179
	Appendix A The geometry of conics	184
	Appendix B The Hohmann orbit is optimal	186
	Problems	188

8	Non-linear oscillations and phase space	194
8.1	Periodic non-linear oscillations	194
8.2	The phase plane $((x_1, x_2)$ -plane)	199
8.3	The phase plane in dynamics $((x, v)$ -plane)	202
8.4	Poincaré-Bendixson theorem: limit cycles	205
8.5	Driven non-linear oscillations	211
	Problems	214
2	Multi-particle systems	219
9	The energy principle	221
9.1	Configurations and degrees of freedom	221
9.2	The energy principle for a system	223
9.3	Energy conservation for a system	225
9.4	Kinetic energy of a rigid body	233
	Problems	241
10	The linear momentum principle	245
10.1	Linear momentum	245
10.2	The linear momentum principle	246
10.3	Motion of the centre of mass	247
10.4	Conservation of linear momentum	250
10.5	Rocket motion	251
10.6	Collision theory	255
10.7	Collision processes in the zero-momentum frame	259
10.8	The two-body problem	264
10.9	Two-body scattering	269
10.10	Integrable mechanical systems	273
	Appendix A Modelling bodies by particles	277
	Problems	279
11	The angular momentum principle	286
11.1	The moment of a force	286
11.2	Angular momentum	289
11.3	Angular momentum of a rigid body	292
11.4	The angular momentum principle	294
11.5	Conservation of angular momentum	298
11.6	Planar rigid body motion	306
11.7	Rigid body statics in three dimensions	313
	Problems	317

3	Analytical mechanics	321
12	Lagrange's equations and conservation principles	323
12.1	Constraints and constraint forces	323
12.2	Generalised coordinates	325
12.3	Configuration space (q -space)	330
12.4	D'Alembert's principle	333
12.5	Lagrange's equations	335
12.6	Systems with moving constraints	344
12.7	The Lagrangian	348
12.8	The energy function h	351
12.9	Generalised momenta	354
12.10	Symmetry and conservation principles	356
	Problems	361
13	The calculus of variations and Hamilton's principle	366
13.1	Some typical minimisation problems	367
13.2	The Euler–Lagrange equation	369
13.3	Variational principles	380
13.4	Hamilton's principle	383
	Problems	388
14	Hamilton's equations and phase space	393
14.1	Systems of first order ODEs	393
14.2	Legendre transforms	396
14.3	Hamilton's equations	400
14.4	Hamiltonian phase space ((q, p) -space)	406
14.5	Liouville's theorem and recurrence	408
	Problems	413
4	Further topics	419
15	The general theory of small oscillations	421
15.1	Stable equilibrium and small oscillations	421
15.2	The approximate forms of T and V	425
15.3	The general theory of normal modes	429
15.4	Existence theory for normal modes	433
15.5	Some typical normal mode problems	436
15.6	Orthogonality of normal modes	444
15.7	General small oscillations	447
15.8	Normal coordinates	448
	Problems	452

16	Vector angular velocity and rigid body kinematics	457
16.1	Rotation about a fixed axis	457
16.2	General rigid body kinematics	460
	Problems	467
17	Rotating reference frames	469
17.1	Transformation formulae	469
17.2	Particle dynamics in a non-inertial frame	476
17.3	Motion relative to the Earth	478
17.4	Multi-particle system in a non-inertial frame	485
	Problems	489
18	Tensor algebra and the inertia tensor	492
18.1	Orthogonal transformations	493
18.2	Rotated and reflected coordinate systems	495
18.3	Scalars, vectors and tensors	499
18.4	Tensor algebra	505
18.5	The inertia tensor	508
18.6	Principal axes of a symmetric tensor	514
18.7	Dynamical symmetry	516
	Problems	519
19	Problems in rigid body dynamics	522
19.1	Equations of rigid body dynamics	522
19.2	Motion of ‘spheres’	524
19.3	The snooker ball	525
19.4	Free motion of bodies with axial symmetry	527
19.5	The spinning top	531
19.6	Lagrangian dynamics of the top	535
19.7	The gyrocompass	541
19.8	Euler’s equations	544
19.9	Free motion of an unsymmetrical body	549
19.10	The rolling wheel	556
	Problems	560
Appendix	Centres of mass and moments of inertia	564
A.1	Centre of mass	564
A.2	Moment of inertia	567
A.3	Parallel and perpendicular axes	571
Answers to the problems		576
	<i>Bibliography</i>	589
	<i>Index</i>	591
