

Mechanics of
AIRCRAFT
STRUCTURES

SECOND EDITION

C . T . S U N

CONTENTS

Preface	xiii
Preface to the First Edition	xv
1 Characteristics of Aircraft Structures and Materials	1
1.1 Introduction / 1	
1.2 Basic Structural Elements in Aircraft Structure / 2	
1.2.1 Axial Member / 2	
1.2.2 Shear Panel / 4	
1.2.3 Bending Member (Beam) / 5	
1.2.4 Torsion Member / 7	
1.3 Wing and Fuselage / 8	
1.3.1 Load Transfer / 9	
1.3.2 Wing Structure / 10	
1.3.3 Fuselage / 11	
1.4 Aircraft Materials / 12	
Problems / 17	
2 Introduction to Elasticity	19
2.1 Concept of Displacement / 19	
2.2 Strain / 21	
2.3 Stress / 25	
2.4 Equations of Equilibrium in a Nonuniform Stress Field / 28	
2.5 Principal Stress / 31	
2.6 Shear Stress / 34	
2.7 Revisit of Transformation of Stress / 36	

- 2.8 Linear Stress-Strain Relations / 38
 - 2.8.1 Strains Induced by Normal Stress / 39
 - 2.8.2 Strains Induced by Shear Stress / 42
 - 2.8.3 Three-Dimensional Stress-Strain Relations / 43
- 2.9 Elastic Strain Energy / 47
- 2.10 Plane Elasticity / 49
 - 2.10.1 Stress-Strain Relations for Plane Isotropic Solids / 50
 - 2.10.2 Stress-Strain Relations for Orthotropic Solids in Plane Stress / 53
 - 2.10.3 Governing Equations / 54
 - 2.10.4 Solution by Airy Stress Function for Plane Isotropic Solids / 56
- Problems / 57

3 Torsion

63

- 3.1 Saint-Venant's Principle / 63
- 3.2 Torsion of Uniform Bars / 67
- 3.3 Bars with Circular Cross-Sections / 74
- 3.4 Bars with Narrow Rectangular Cross-Sections / 77
- 3.5 Closed Single-Cell Thin-Walled Sections / 81
- 3.6 Multicell Thin-Walled Sections / 91
- 3.7 Warping in Open Thin-Walled Sections / 96
- 3.8 Warping in Closed Thin-Walled Sections / 101
- 3.9 Effect of End Constraints / 103
- Problems / 110

4 Bending and Flexural Shear

115

- 4.1 Derivation of the Simple (Bernoulli–Euler) Beam Equation / 115
- 4.2 Bidirectional Bending / 120
- 4.3 Transverse Shear Stress due to Transverse Force in Symmetric Sections / 128
 - 4.3.1 Narrow Rectangular Cross-Section / 128
 - 4.3.2 General Symmetric Sections / 130
 - 4.3.3 Thin-Walled Sections / 132
 - 4.3.4 Shear Deformation in Thin-Walled Sections / 133

- 4.4 Timoshenko Beam Theory / 136
- 4.5 Shear Lag / 140
- Problems / 144

5 Flexural Shear Flow in Thin-Walled Sections 149

- 5.1 Flexural Shear Flow in Open Thin-Walled Sections / 149
 - 5.1.1 Symmetric Thin-Walled Sections / 150
 - 5.1.2 Unsymmetric Thin-Walled Sections / 155
 - 5.1.3 Multiple Shear Flow Junctions / 157
 - 5.1.4 Selection of Shear Flow Contour / 158
- 5.2 Shear Center in Open Sections / 159
- 5.3 Closed Thin-Walled Sections and Combined Flexural and Torsional Shear Flow / 165
 - 5.3.1 Shear Center / 167
 - 5.3.2 Statically Determinate Shear Flow / 171
- 5.4 Closed Multicell Sections / 173
- Problems / 177

6 Failure Criteria for Isotropic Materials 183

- 6.1 Strength Criteria for Brittle Materials / 183
 - 6.1.1 Maximum Principal Stress Criterion / 184
 - 6.1.2 Coulomb–Mohr Criterion / 184
- 6.2 Yield Criteria for Ductile Materials / 186
 - 6.2.1 Maximum Shear Stress Criterion (Tresca Yield Criterion) in Plane Stress / 187
 - 6.2.2 Maximum Distortion Energy Criterion (von Mises Yield Criterion) / 188
- 6.3 Fracture Mechanics / 193
 - 6.3.1 Stress Concentration / 193
 - 6.3.2 Concept of Cracks and Strain Energy Release Rate / 194
 - 6.3.3 Fracture Criterion / 196
- 6.4 Stress Intensity Factor / 201
 - 6.4.1 Symmetric Loading (Mode I Fracture) / 201
 - 6.4.2 Antisymmetric Loading (Mode II Fracture) / 204
 - 6.4.3 Relation between K and G / 206
 - 6.4.4 Mixed Mode Fracture / 210

- 6.5 Effect of Crack Tip Plasticity / 211
- 6.6 Fatigue Failure / 214
 - 6.6.1 Constant Stress Amplitude / 215
 - 6.6.2 $S-N$ Curves / 215
 - 6.6.3 Variable Amplitude Loading / 216
- 6.7 Fatigue Crack Growth / 217
 - Problems / 219

7 Elastic Buckling

225

- 7.1 Eccentrically Loaded Beam-Column / 225
- 7.2 Elastic Buckling of Straight Bars / 227
 - 7.2.1 Pinned-Pinned Bar / 228
 - 7.2.2 Clamped-Free Bar / 231
 - 7.2.3 Clamped-Pinned Bar / 232
 - 7.2.4 Clamped-Clamped Bar / 234
 - 7.2.5 Effective Length of Buckling / 235
- 7.3 Initial Imperfection / 236
- 7.4 Postbuckling Behavior / 238
- 7.5 Bar of Unsymmetric Section / 244
- 7.6 Torsional-Flexural Buckling of Thin-Walled Bars / 246
 - 7.6.1 Nonuniform Torsion / 246
 - 7.6.2 Torsional Buckling of Doubly Symmetric Section / 248
 - 7.6.3 Torsional-Flexural Buckling / 251
- 7.7 Elastic Buckling of Flat Plates / 256
 - 7.7.1 Governing Equation for Flat Plates / 256
 - 7.7.2 Cylindrical Bending / 258
 - 7.7.3 Buckling of Rectangular Plates / 259
 - 7.7.4 Buckling under Shearing Stresses / 263
- 7.8 Local Buckling of Open Sections / 264
 - Problems / 266

8 Analysis of Composite Laminates

271

- 8.1 Plane Stress Equations for Composite Lamina / 271
- 8.2 Off-Axis Loading / 277
- 8.3 Notation for Stacking Sequence in Laminates / 280

- 8.4 Symmetric Laminate under In-Plane Loading / 282
- 8.5 Effective Moduli for Symmetric Laminates / 285
- 8.6 Laminar Stresses / 288
- 8.7 $[\pm 45^\circ]$ Laminate / 290
- Problems / 292
