

# Practical Wastewater Treatment

DAVID L. RUSSELL

# CONTENTS

<b>Preface</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
Introduction, 1	
Water Composition, 2	
Pure Water, 2	
Salts and Ions in Water, 6	
Principal Contaminants and Ions in Water and Measurement Methods, 7	
Sources of Water, 8	
Water Quality, 11	
Water Quality Regulations—Legal Structure, 12	
Rules and Regulations for Water Quality Control, 13	
Applications, 26	
Sample Problem, 28	
Solution, 28	
Drinking Water Quality Standards: USA and International Standards, 29	
<b>2 Effects of Pollution</b>	<b>37</b>
Effluent Toxicity Testing, 37	
Oxygen Depletion—Biochemical Oxygen Demand, 39	
Oxygen Uptake in a Stream—The Oxygen Sag Equation, 42	
Biology of Polluted Water, 43	

<b>3</b>	<b>Flow Measurement</b>	<b>47</b>
	Review of Open Channel Hydraulics, 47	
	Determining Normal and Gradually Varied Flows, 52	
	Types of Flowmeters, 54	
	Weir Plates, 56	
<b>4</b>	<b>Sampling and Statistical Considerations</b>	<b>61</b>
	Errors in Process Measurements, 61	
	Statistical Distributions, 64	
	Lognormal Distributions, 64	
	Weibull Distributions, 65	
	Probable Error, 67	
	Repeat Measurements, 68	
	Sampling, 69	
<b>5</b>	<b>Important Concepts from Aquatic Chemistry</b>	<b>71</b>
	Common Ion Species, 71	
	Most Important Chemicals in the Water Environment, 72	
	Carbonate Chemistry, 72	
	Chemical Water Softening, 79	
	Excess Lime Process, 80	
	Metals Removal by Precipitation, 82	
	Heavy Metals, 83	
	Chromium Reduction and Metals Precipitation, 83	
	Silicates in Treatment Systems, 87	
	Nitrogen, 87	
	Sulfur, 88	
	Phosphorous, 88	
<b>6</b>	<b>Elements of Biological Treatment</b>	<b>91</b>
	Introduction, 91	
	BOD and COD Solids, 92	
	Suspended Solids, 93	
	Biological Growth Equation, 94	
	Biological Growth & the Monod Equation, 96	
	Principles of Biological Treatment Systems, 100	
	Activated Sludge & Its Variations, 102	
	Biological Treatment of Difficult Wastes, 110	
	Modeling the Biological Process, 111	
	Steady, 112	

JASS, 112  
 Scilab/SeTS, 113  
 Available Commercial Modeling Tools, 113  
 Modeling Guidance, 119  
 The IWA Models for Activated Sludge, 122

## **7 Precipitation and Sedimentation 125**

Theory of Sedimentation, 125  
 Clarifiers and Their Design, 126  
 Lamellas and Specialty Devices, 129

## **8 Filtration Theory and Practice 135**

Depth Filters Design: Theory and Practice, 135  
 Filtration Hydraulics, 138  
 Hydraulics of Filter Washing, 139  
 Skin Filters, 141  
 Filter Elements and Design, 143

## **9 Disinfection 149**

General, 149  
 Rate of Kill—Disinfection Parameters, 149  
 Status of U.S. Drinking Water, 152  
 Chlorine, 155  
 Ozone, 162  
 Ultraviolet Light, 164  
 Other Disinfecting Compounds, 164

## **10 Nitrogen Removal 173**

Nitrogen Chemistry and Forms, 173  
 Ammonia Toxicity and Nitrogen Loading, 175  
 Nitrate, 176  
 Nitrogen Removals, 176  
 Mixed Media and Attached Growth Systems, 189  
 Conclusions, 189

## **11 Phosphorous Removal 191**

General, 191  
 Biological Phosphorous Removal, 194  
 Chemical Phosphorous Removal, 198

<b>12 Anaerobic Treatment</b>	<b>203</b>
Basic Anaerobic Processes, 203	
Anaerobic Pretreatment, 206	
Sludge Digestion, 208	
Sludge Treatment, 210	
Anaerobic Digester Model ADM1, 210	
<b>13 Micro/Ultrafiltration</b>	<b>211</b>
Introduction to Membrane Separations and Microfiltration, 211	
Design Values, 215	
Process Selection, 215	
<b>14 Reverse Osmosis</b>	<b>221</b>
Introduction, 221	
Mass Transfer Theory, 221	
Membrane Selection, 222	
Membrane Materials, 223	
Membrane Configurations, 223	
RO Design Considerations, 224	
Design Parameters, 225	
<b>15 Carbon Adsorption</b>	<b>231</b>
Breakthrough Curves, 231	
The Freundlich and the Langmuir Equations, 232	
Carbon Adsorption Physical Coefficients and Economics, 232	
PACT <sup>TM</sup> Process, 233	
<b>16 Ion Exchange</b>	<b>237</b>
Introduction, 237	
Resins, 237	
Selectivity, 239	
Selectivity Coefficient, 239	
Design Considerations, 240	
<b>17 Dissolved Air Flotation and Techniques</b>	<b>243</b>
Design Basics for DAF, 243	
Operating Parameters, 244	
Electroflotation, 247	
Electrocoagulation, 251	

<b>18 Coagulation, Flocculation, and Chemical Treatment</b>	<b>255</b>
Introduction, 255	
Flocculation and Mixing, 258	
Practice, 259	
Modeling, 259	
<b>19 Waste Topics</b>	<b>261</b>
Oily Wastewaters, 261	
Blood and Protein, 262	
Milk Wastes, 263	
Refinery Wastes, 263	
Metal Plating Wastes, 263	
Starch Wastes, 264	
Phenols and Chemical Plant Wastes, 264	
Small Waste Flows, 264	
Final Thoughts, 264	
<b>Index</b>	<b>267</b>
