FEEDSTOCK RECYCLING AND PYROLYSIS OF WASTE PLASTICS

Converting Waste Plastics
into Diesel and
Other Fuels

Edited by **John Scheirs**
and **Walter Kaminsky**

Contents

Contributors	xix
Series Preface	xxiii
Preface	xxv
About the Editors	xxix
I INTRODUCTION	1
1 Introduction to Feedstock Recycling of Plastics	3
<i>A. Buekens</i>	
Abbreviations	3
1 Introduction	3
2 Nomenclature	4
3 Pyrolysis of Plastics and Rubber	6
3.1 Survey of Previous Work	7
3.2 Products from Polymers	8
3.3 Hetero-atoms and Side Products	15
3.4 Fundamentals	18
3.5 Value of the Resulting Products	20
4 Feedstock Recycling	22
4.1 Survey	22
4.2 Problems with Hetero-atoms	23
4.3 Collection Systems	24
4.4 Logistics of Supply	25
5 Some Feasible Processes	27
5.1 Pilot and Industrial Plant Operation	27
5.2 Conclusions	32
6 Waste management	32
6.1 Principles	32
6.2 Plastics Waste	33
6.3 Rubber Waste	35
6.4 Plastics Pyrolysis as a Waste Management Option	35
7 Conclusions	39
References	40

II	CATALYTIC CRACKING	43
2	Acid-Catalyzed Cracking of Polyolefins: Primary Reaction Mechanisms	45
	<i>Robert L. White</i>	
1	Introduction	45
2	Polyethylene Cracking	46
3	Polystyrene Cracking	54
4	Hydrocracking Processes	60
	4.1 PE-PtHZSM-5	60
	4.2 PE-PtHY	63
	4.3 PE-PtHMCM-41	63
5	Conclusions	67
	References	67
3	Catalytic Upgrading of Plastic Wastes	73
	<i>J. Aguado, D. P. Serrano and J. M. Escola</i>	
1	Introduction	73
	1.1 Catalytic versus Thermal Cracking	74
	1.2 Plastics Susceptible to Upgrading by Catalytic Cracking	77
	1.3 Products Derived from the Catalytic Cracking	78
2	Catalytic Systems	79
	2.1 Homogeneous Catalysts	79
	2.2 Heterogeneous Catalysts	79
3	Reactors	85
	3.1 Batch/Semi-batch Reactors	86
	3.2 Fixed-bed Reactors	86
	3.3 Fluidized-bed Reactors	88
	3.4 Spouted-bed Reactors	90
	3.5 Screw Kiln Reactors	91
4	Influence of the Main Operation Variables	92
	4.1 Temperature	93
	4.2 Catalyst Amount	94
	4.3 Time	95
	4.4 Plastics Waste Composition	95
5	Processes	96
	5.1 Direct Catalytic Cracking	97
	5.2 Thermal Degradation and Subsequent Catalytic Upgrading	99
6	Related Technologies: Coprocessing	101
	6.1 Coal	101
	6.2 Petroleum Cuts	102
	6.3 Solvents	103
7	Concluding Remarks	103
	References	104

4	Thermal and Catalytic Conversion of Polyolefins	111
	<i>Jerzy Walendziewski</i>	
1	Introduction	111
2	General Scheme of Waste Polyolefin Processing	112
3	Waste Plastics Suitable for Cracking and Pyrolysis	113
4	Mechanism of Cracking Processes	113
5	Waste Plastics Processing	115
	5.1 Catalytic and Thermal Cracking Processes: Typical Products	115
	5.2 Coprocessing of Waste Plastics with Other Raw Materials	119
6	Reactor Design	120
7	Pilot Plants and Commercial Plants	122
8	Economic Aspects	124
	References	125
5	Thermal and Catalytic Degradation of Waste HDPE	129
	<i>Kyong-Hwan Lee</i>	
1	Introduction	129
2	Theory of Plastics Pyrolysis	130
3	Process Flow Diagram	133
4	Total Mass Balance	136
5	Effect of Temperature	137
6	Effect of Catalyst	141
7	Various Catalysts	144
8	Effect of Addition of Other Thermoplastics	149
9	Fractional Distillation of Products	153
10	Properties of Liquid Product	155
	References	158
6	Development of a Process for the Continuous Conversion of Waste Plastics Mixtures to Fuel	161
	<i>Takao Masuda and Teruoki Tago</i>	
1	Introduction	161
2	Recovery of Heavy Oil from Waste Plastic	162
	2.1 Degradation of Various Plastics	162
	2.2 Catalytic Cracking of Waste Plastics Without Residue . .	165
	2.3 Continuous Degradation of Waste Plastics Mixtures for the Recovery of Heavy Oil	168
3	Upgrading of Waste-plastics-derived Heavy Oil Over Catalysts	172
	3.1 Catalytic Cracking of Heavy Oil over Solid-acid Catalysts	172
	3.2 Production of High-quality Gasoline over REY Zeolites .	175
	3.3 Kinetics of the Catalytic Cracking of Heavy Oil over REY Zeolites	180
	3.4 Usage of Steam as a Carrier Gas	183

4	Continuous Production of Fuels from Waste Plastics	188
4.1	Continuous Production of Fuels	188
	References	190
7	Catalytic Degradation of Plastic Waste to Fuel over Microporous Materials	193
	<i>George Manos</i>	
1	Introduction	193
2	Operation Modes	194
3	Zeolites	195
4	Polymer-to-catalyst Ratio	196
5	Initial Degradation Mechanism	199
6	Product Distribution	201
6.1	Conversion, Liquid Yield, Coke Content	202
6.2	Characterization of Gaseous/Liquid Products	203
6.3	Boiling Point Distribution of Liquid Fraction	203
7	Concluding Remarks	204
	References	206
8	Liquefaction of Municipal Waste Plastics over Acidic and Nonacidic Catalysts	209
	<i>Jale Yanik and Tamer Karayildirim</i>	
1	Introduction	209
2	Catalytic Liquefaction of MWP	210
2.1	Liquid Phase Contact	210
2.2	Thermal Cracking plus Catalytic Upgrading	211
2.3	Co-processing of MWP	216
3	Conclusions	221
	References	221
9	Kinetic Model of the Chemical and Catalytic Recycling of Waste Polyethylene into Fuels	225
	<i>Norbert Miskolczi</i>	
1	Introduction	225
2	Reaction Kinetics of Degradation	226
2.1	Reaction Mechanism	228
3	Catalysts	239
3.1	Monofunctional Catalysts	239
3.2	Bifunctional Catalysts	241
3.3	Solid Alkalis	243
	References	244

III QUALITY OF FUELS **249**

10	Production of Gaseous and Liquid Fuels by Pyrolysis and Gasification of Plastics: Technological Approach	251
	<i>C. Gisèle Jung and André Fontana</i>	
1	Introduction	251
2	Literature Review on Plastics Carbonization	254
2.1	Polyethylene (PE)	255
2.2	Polypropylene (PP)	258
2.3	Polystyrene (PS)	262
2.4	Polyvinyl Chloride (PVC)	264
2.5	Polyethylene Terephthalate (PET)	266
2.6	Plastic Mixtures	267
3	Technological Approach	271
3.1	Predictive Carbonization Model	271
3.2	Scale-up	272
3.3	Pyrolysis Technologies	272
3.4	Gasification Technologies	275
3.5	Fuel Valorization	278
	References	280
11	Yield and Composition of Gases and Oils/Waxes from the Feedstock Recycling of Waste Plastic	285
	<i>Paul T. Williams</i>	
1	Introduction	285
2	Feedstock Recycling of Plastics	288
2.1	Product Yield	288
2.2	Gas Composition	292
2.3	Oil/Wax Composition from the Feedstock Recycling of Single Plastics	295
3	Conclusions	309
	References	309
12	Composition of Liquid Fuels Derived from the Pyrolysis of Plastics	315
	<i>Marianne Blazsó</i>	
1	Introduction	315
2	Experimental Methods	316
3	Chemical Composition of Pyrolysis Liquids	317
3.1	Relation of Major Oil Characteristics and Chemical Features of Component Compounds	317
3.2	Thermal Decomposition Reactions of Polymers	318
4	Pyrolysis Products of Packaging Waste Plastics	321
4.1	Polyolefins	322

4.2	Vinyl Polymers	326
4.3	Polyesters	329
5	Pyrolysis Products of Automotive Waste Plastics	329
5.1	Styrene Copolymers	329
5.2	Rubber Plastics	331
5.3	Polyamides	333
5.4	Polyurethanes (PU)	335
6	Pyrolysis Products of Electronic Waste Plastics	337
6.1	Polycarbonate	338
6.2	Epoxy Resin	339
6.3	Phenol-Formaldehyde Resin	340
	References	341
13	Production of Premium Oil Products from Waste Plastic by Pyrolysis and Hydroprocessing	345
	<i>S.J. Miller, N. Shah and G.P. Huffman</i>	
1	Background	345
2	Conversion of Waste Plastics to Transportation Fuels	346
3	Direct Liquefaction and Co-processing of Waste Plastic	346
4	Pyrolysis and Hydroprocessing	347
5	Feasibility Study	350
6	Conversion of Waste Plastic to Lubricating Base Oil	351
7	Lubricating Base Oils from Fischer-Tropsch Wax and Waste Plastic	351
8	One-gallon-per-day Pilot Plant	354
8.1	Hydroprocessing	355
8.2	Pyrolysis Pilot Plant Results for Various Feedstocks	355
9	Summary and Conclusions	358
	References	360
14	The Conversion of Waste Plastics/Petroleum Residue Mixtures to Transportation Fuels	363
	<i>Mohammad Farhat Ali and Mohammad Nahid Siddiqui</i>	
1	Introduction	363
2	The Characteristics and Chemical Structure of Plastics	364
3	The Characteristics and Chemical Properties of Petroleum Residue	365

IV	REACTOR TYPES	381
15	Overview of Commercial Pyrolysis Processes for Waste Plastics	383
	<i>John Scheirs</i>	
1	Introduction	383
1.1	Advantages of Pyrolysis	385
1.2	Thermal Cracking	385
1.3	Catalytic Cracking	386
2	Feedstock Options	386
2.1	Polyethylene (PE)	387
2.2	Polypropylene (PP)	387
2.3	Polystyrene (PS) Pyrolysis	388
2.4	PET	389
2.5	PVC	390
2.6	Halogenated Polymers	391
2.7	Plastic Feedstock Specification	391
3	Operational Considerations	392
3.1	Preventing Coking	392
3.2	Preventing Corrosion	393
3.3	Tank/Kettle Reactors	393
3.4	Reflux	393
3.5	Problems with Batch Pyrolysis	393
3.6	Continuous Systems	394
3.7	Fluidized-bed Processes	394
3.8	Fluid-bed Coking	394
3.9	Fluid Catalytic Cracking (FCC)	394
3.10	Catalytic Cracking	394
4	Engineering Design Aspects	395
4.1	Pyrolysis Chamber Design	395
4.2	Pyrolysis Vessel Construction	396
4.3	Agitator Speed	396
4.4	Burner Characteristics	396
4.5	Inert Purge Gas	396
4.6	Distillation Columns	397
4.7	Centrifuge	397
4.8	Scrubber	397
4.9	Dechlorination	397
4.10	Hydrotreating	397
4.11	Catalytic Dewaxing and Isomerization Dewaxing	398

5	Quality of the Output Fuels	399
5.1	Unsaturation	399
5.2	Carbon Residue in the Fuel	399
5.3	Low-temperature Properties	399
5.4	Fuel Instability	400
5.5	Diesel Additives	401
5.6	Storage Stability of Plastic-derived Diesel Fuel	401
5.7	Characteristics of the Solid Residue	403
5.8	Gaseous Emissions	403
6	Catalytic Cracking	404
6.1	Catalyst Activity and Selectivity	404
6.2	Layered Clay Catalysts	405
6.3	External Catalysts	406
6.4	PS Catalytic Cracking	406
6.5	Catalytic Dechlorination	407
7	Commercial Plastic Pyrolysis Processes	407
7.1	Thermofuel™ Process	407
7.2	Smuda Process	414
7.3	Polymer-Engineering Process (Catalytic Depolymerization)	418
7.4	Royco Process	422
7.5	Reentech Process	423
7.6	Hitachi Process	427
7.7	Chiyoda Process	429
7.8	Blowdec Process	429
7.9	Conrad Process	430
7.10	Other Processes with Separate Catalyst Beds	431
8	Conclusions	431
