## PART I THE PHYSICAL AND MATHEMATICAL ENVIRONMENT

<b>1</b>	<b>The physical and mathematical environment</b>	<b>3</b>
<b>A:</b>	<b>An inheritance from physics</b>	3
1.1	The beginning	3
1.2	Integrals over function spaces	6
1.3	The operator formalism	6
1.4	A few titles	7
<b>B:</b>	<b>A toolkit from analysis</b>	9
1.5	A tutorial in Lebesgue integration	9
1.6	Stochastic processes and pomeasures	15
1.7	Fourier transformation and prodistributions	19
<b>C:</b>	<b>Feynman's integral versus Kac's integral</b>	23
1.8	Planck's blackbody radiation law	23
1.9	Imaginary time and inverse temperature	26
1.10	Feynman's integral versus Kac's integral	27
1.11	Hamiltonian versus lagrangian	29
	References	31

## PART II QUANTUM MECHANICS

<b>2</b>	<b>First lesson: gaussian integrals</b>	<b>35</b>
2.1	Gaussians in $\mathbb{R}$	35
2.2	Gaussians in $\mathbb{R}^D$	35
2.3	Gaussians on a Banach space	38

2.4	Variances and covariances	42
2.5	Scaling and coarse-graining	46
	References	55
<b>3</b>	<b>Selected examples</b>	<b>56</b>
3.1	The Wiener measure and brownian paths	57
3.2	Canonical gaussians in $L^2$ and $L^{2,1}$	59
3.3	The forced harmonic oscillator	63
3.4	Phase-space path integrals	73
	References	76
<b>4</b>	<b>Semiclassical expansion; WKB</b>	<b>78</b>
4.1	Introduction	78
4.2	The WKB approximation	80
4.3	An example: the anharmonic oscillator	88
4.4	Incompatibility with analytic continuation	92
4.5	Physical interpretation of the WKB approximation	93
	References	94
<b>5</b>	<b>Semiclassical expansion; beyond WKB</b>	<b>96</b>
5.1	Introduction	96
5.2	Constants of the motion	100
5.3	Caustics	101
5.4	Glory scattering	104
5.5	Tunneling	106
	References	111
<b>6</b>	<b>Quantum dynamics: path integrals and the operator formalism</b>	<b>114</b>
6.1	Physical dimensions and expansions	114
6.2	A free particle	115
6.3	Particles in a scalar potential $V$	118
6.4	Particles in a vector potential $\vec{A}$	126
6.5	Matrix elements and kernels	129
	References	130
<b>PART III METHODS FROM DIFFERENTIAL GEOMETRY</b>		
<b>7</b>	<b>Symmetries</b>	<b>135</b>
7.1	Groups of transformations. Dynamical vector fields	135
7.2	A basic theorem	137

7.3	The group of transformations on a frame bundle	139
7.4	Symplectic manifolds	141
	References	144
<b>8</b>	<b>Homotopy</b>	<b>146</b>
8.1	An example: quantizing a spinning top	146
8.2	Propagators on $\text{SO}(3)$ and $\text{SU}(2)$	147
8.3	The homotopy theorem for path integration	150
8.4	Systems of indistinguishable particles. Anyons	151
8.5	A simple model of the Aharonov–Bohm effect	152
	References	156
<b>9</b>	<b>Grassmann analysis: basics</b>	<b>157</b>
9.1	Introduction	157
9.2	A compendium of Grassmann analysis	158
9.3	Berezin integration	164
9.4	Forms and densities	168
	References	173
<b>10</b>	<b>Grassmann analysis: applications</b>	<b>175</b>
10.1	The Euler–Poincaré characteristic	175
10.2	Supersymmetric quantum field theory	183
10.3	The Dirac operator and Dirac matrices	186
	References	189
<b>11</b>	<b>Volume elements, divergences, gradients</b>	<b>191</b>
11.1	Introduction. Divergences	191
11.2	Comparing volume elements	197
11.3	Integration by parts	202
	References	210
<b>PART IV NON-GAUSSIAN APPLICATIONS</b>		
<b>12</b>	<b>Poisson processes in physics</b>	<b>215</b>
12.1	The telegraph equation	215
12.2	Klein–Gordon and Dirac equations	220
12.3	Two-state systems interacting with their environment	225
	References	231
<b>13</b>	<b>A mathematical theory of Poisson processes</b>	<b>233</b>
13.1	Poisson stochastic processes	234
13.2	Spaces of Poisson paths	241

13.3	Stochastic solutions of differential equations	251
13.4	Differential equations: explicit solutions	262
	References	266
<b>14</b>	<b>The first exit time; energy problems</b>	<b>268</b>
14.1	Introduction: fixed-energy Green's function	268
14.2	The path integral for a fixed-energy amplitude	272
14.3	Periodic and quasiperiodic orbits	276
14.4	Intrinsic and tuned times of a process	281
	References	284
<b>PART V PROBLEMS IN QUANTUM FIELD THEORY</b>		
<b>15</b>	<b>Renormalization 1: an introduction</b>	<b>289</b>
15.1	Introduction	289
15.2	From paths to fields	291
15.3	Green's example	297
15.4	Dimensional regularization	300
	References	307
<b>16</b>	<b>Renormalization 2: scaling</b>	<b>308</b>
16.1	The renormalization group	308
16.2	The $\lambda\phi^4$ system	314
	References	323
<b>17</b>	<b>Renormalization 3: combinatorics, contributed by Markus Berg</b>	<b>324</b>
17.1	Introduction	324
17.2	Background	325
17.3	Graph summary	327
17.4	The grafting operator	328
17.5	Lie algebra	331
17.6	Other operations	338
17.7	Renormalization	339
17.8	A three-loop example	342
17.9	Renormalization-group flows and nonrenormalizable theories	344
17.10	Conclusion	345
	References	351
<b>18</b>	<b>Volume elements in quantum field theory, contributed by Bryce DeWitt</b>	<b>355</b>
18.1	Introduction	355

18.2 Cases in which equation (18.3) is exact	357
18.3 Loop expansions	358
References	364

## PART VI PROJECTS

<b>19 Projects</b>	<b>367</b>
19.1 Gaussian integrals	367
19.2 Semiclassical expansions	370
19.3 Homotopy	371
19.4 Grassmann analysis	373
19.5 Volume elements, divergences, gradients	376
19.6 Poisson processes	379
19.7 Renormalization	380

## APPENDICES

<b>Appendix A Forward and backward integrals.</b>	
Spaces of pointed paths	387
<b>Appendix B Product integrals</b>	391
<b>Appendix C A compendium of gaussian integrals</b>	395
<b>Appendix D Wick calculus,</b> contributed by Alexander Wurm	399
<b>Appendix E The Jacobi operator</b>	404
<b>Appendix F Change of variables of integration</b>	415
<b>Appendix G Analytic properties of covariances</b>	422
<b>Appendix H Feynman's checkerboard</b>	432
<i>Bibliography</i>	437
<i>Index</i>	451
