

Statistical Quality Design and Control

Contemporary Concepts and Methods

Second Edition

Richard E. DeVor • Tsong-how Chang • John W. Sutherland

Contents

Part I	Fundamental Concepts and Methods	1
Chapter 1	Evolution of Quality Design and Control	3
	1.1 Introduction	3
	1.2 Quality Revolution of the 1980s	4
	1.3 Historical Perspective of the Management of Quality	6
	1.4 Quality and the Engineering Design Process	13
	1.5 Strategic View of Quality Design and Improvement	17
	1.6 Beyond the 1980s—The Institutionalization of Quality in the Organization	26
	Chapter Summary	31
	Exercises	31
Chapter 2	Conceptual Framework for Quality: Design and Control	34
	2.1 Introduction	34
	2.2 Deming Philosophy of Never-Ending Improvement	35
	2.3 Traditional View of Quality	49
	2.4 Taguchi's Definition of Quality	52
	2.5 Cost-of-Quality Issue	57
	Exercises	62
Chapter 3	Statistical Methods and Probability Concepts for Data Characterization	64
	3.1 Introduction	64
	3.2 Characterizations and Representations of Data	64
	3.3 Some Important Concepts of Probability and Probability Distributions	71
	3.4 Normal Distribution	78
	3.5 <i>Some Other Useful Graphical Representations of Data</i>	82
	Exercises	95

Chapter 4	Sampling Distributions and Statistical Hypothesis Testing	106
4.1	Introduction	106
4.2	Purpose and Nature of Sampling	107
4.3	Sampling Distribution of \bar{X}	110
4.4	Hypothesis Testing of a Population Mean	115
4.5	Confidence Interval Estimation of the mean	126
	Exercises	130
Part II	Process Control and Improvement	135
Chapter 5	Conceptual Framework for Statistical Process Control	137
5.1	Introduction	137
5.2	Origins and Characteristic Behavior of Variability	138
5.3	Process Behavior Over Time	142
5.4	Shewhart's Concept of Statistical Control	147
5.5	Control Chart Approach to the Management of Process Variation	151
5.6	The <i>Process</i> of Statistical Process Control	158
5.7	Deming's Famous Red Bead Experiment	161
5.8	The Debilitating Effects of Tampering	170
	Exercises	172
Chapter 6	Shewhart Control Charts for Variable Data	175
6.1	Introduction	175
6.2	Statistical Basis for Shewhart Control Charts	175
6.3	Control Chart for Averages, \bar{X}	178
6.4	Control Chart for Ranges	181
6.5	Setting Up \bar{X} and R Control Charts	183
6.6	Interpretation of Shewhart Control Chart Patterns	185
6.7	Closing the Loop Using the Process of SPC	193
6.8	Cylinder Liner Boring Case Study—Demonstrating the Process of SPC	200
6.9	A Note on Computer Software	212
	Exercises	213

Chapter 7	Importance of Rational Sampling	237
7.1	Introduction	237
7.2	Concept of Rational Sampling	237
7.3	Merits of Consecutive Versus Distributed Sampling	240
7.4	Some Common Pitfalls in Subgroup Selection	241
7.5	Examples of the Stratification Phenomenon	247
	Exercises	254
Chapter 8	Interpretation of \bar{X} and R Control Charts: Use of Sampling Experiments	260
8.1	Introduction	260
8.2	Analysis of Control Chart Patterns: A Sampling Experiment	261
8.3	Illustration of Stratification of Subgroups	274
	SPC Workshop #1: Process Simulation, PROSIM	287
Chapter 9	Some Control Chart Methods for Individual Measurements	289
9.1	Introduction	289
9.2	\bar{X} and R_m Control Charts	290
9.3	Case Study: White Millbase Dispersion Process	292
9.4	Exponentially Weighted Moving Average Control Charts	301
	Exercises	313
Chapter 10	Process Capability Assessment	327
10.1	Introduction	327
10.2	Process Capability Versus Process Control	327
10.3	Statistical Assessment of Process Capability: A Case Study Revisited	330
10.4	Some Common Indices of Process Capability	336
10.5	Loss Function Approach to Capability Assessment	339
10.6	The Dilemma of C_{pk} : A Case Study	348
	Exercises	357
Chapter 11	The Design and Analysis of Tolerances	366
11.1	Introduction	366
11.2	Tolerancing and Competitiveness	367
11.3	Statistical Interpretation of Six Sigma Quality	372

- 11.4 Tolerance Design and Analysis 377
- 11.5 Statistical Assessment and Assignment of Tolerances 383
- 11.6 Statistical Process Control and the Statistical
Tolerance Model 391
- Exercises 395

Chapter 12 Statistical Thinking for Process Study: A Case Study 404

- 12.1 Introduction 404
- 12.2 Overview of the Case Study 405
- 12.3 Product Versus Process Control:
Management Strategy 407
- 12.4 Finding Improvement Opportunities
Through Charting 414
- 12.5 Process Capability Versus Process Control 424
- 12.6 Seeking Further Improvement Through Design
of Experiments 432
- Chapter Summary 440
- Exercises 441
- SPC Workshop #2: Turning Simulation, TURNSIM 443

Chapter 13 Shewhart Control Charts for Attribute Data 445

- 13.1 Data Characterization by Attributes 445
- 13.2 Control Chart for Fraction Defective 449
- 13.3 Variable-Sample-Size Considerations for the p Chart 463
- 13.4 Control Chart for Number of Defectives 469
- 13.5 Control Chart for Number of Defects 471
- 13.6 Control Chart for Number of Defects per Unit 479
- Exercises 483

Chapter 14 Attribute Control Chart Implementation for Process Improvement: Two Case Studies 503

- 14.1 Introduction 503
- 14.2 Implementation of SPC Methods: A Case Study
on "Press 120"—Visual Defects in a Molding Process 503
- 14.3 Improvement of an Accounts Payable Process 512

Part III Product/Process Design and Improvement 523

**Chapter 15 Conceptual Framework for Planned
Experimentation 525**

15.1 Introduction 525

15.2 Role of Experimentation in Quality Design and Improvement 525

15.3 Some Important Issues in Planned Experimentation 528

15.4 Dealing with Noise in the Experimental Environment 537

15.5 Role of Planned Experimentation in Taguchi Methods 545

15.6 Contrasting Philosophies for Dealing with Nuisance
or Noise Factors 556

Exercises 558

**Chapter 16 Design and Analysis of Simple Comparative
Experiments 563**

16.1 Introduction 563

16.2 Comparing Two Alternatives Using an External Reference
Distribution—Car Mileage Example 563

16.3 Comparing Two Alternatives via an Internal Reference
Distribution 567

16.4 Comparing Two Alternatives Using a Blocked Design 573

16.5 Comparison of k Treatments Using Analysis of Variance—One-
Way ANOVA 580

16.6 Comparison of Multiple Treatments Using a Blocked Design—
Two-Way ANOVA 592

Chapter Summary 602

Exercises 603

**Chapter 17 Design and Interpretation of 2^k Factorial
Experiments 613**

17.1 Introduction 613

17.2 Process Study Using a Two-Level Factorial Design:
Chemical Calibration for the Foam Molding Process 614

17.3 Construction of the 2^3 Factorial Design 616

17.4 Calculation and Interpretation of Main Effects 618

17.5 Calculation and Interpretation of Interaction
Effects 624

17.6 Generalized Method for the Calculation of Effects 633

17.7 Mathematical Model of the Response	635
17.8 Least-Squares Approach to Model Fitting	641
Exercises	651

Chapter 18 Analysis of Two-Level Factorial Designs 665

18.1 Introduction	665
18.2 Analysis of Replicated 2^k Experiments	666
18.3 Determination of Statistically Significant Effects	673
18.4 Analysis of the Results of Unreplicated Two-Level Factorials	680
Chapter Summary	684
Exercises	685

Chapter 19 Model Building for Design and Improvement Using Two-Level Factorial Designs 695

19.1 Introduction	695
19.2 Glove Box Door Alignment Study Revisited	696
19.3 Diagnostic Checking of the Fitted Model	701
19.4 Checking the Assumption of Common Variance of the Responses	709
19.5 Using the Fitted Model for Quality Improvement	712
19.6 Another Case Study: Surface Finish of a Machined Part	716
19.7 Use of Analysis of Variance for Two-Level Factorial Design Effect Evaluation	724
19.8 Use of Analysis of Variance on the Glove Box Door Alignment Study	731
Exercises	735
DOE Workshop #1: Turning Simulation, TURN5DOE	749

Chapter 20 Two-Level Fractional Factorial Designs 751

20.1 Rationale for, and Consequences of, Fractionation of Two-Level Factorials	751
20.2 System to Define the Confounding Pattern of a Two-Level Fractional Factorial	755
20.3 Procedure for Design Characterization: Another Example	762
20.4 Concept of Resolution of Two-Level Fractional Factorial Designs	765

20.5 Case Study Application: The Sandmill Experiment Revisited	768
20.6 Orthogonal Arrays and Two-Level Fractional Factorial Designs	775
Exercises	784
 Chapter 21 Sequential and Iterative Nature of Experimentation	 797
21.1 Value of Sequential Experimentation: A Case Study	797
21.2 Sequential Assembly of Fractional Factorials	810
21.3 Soybean Whipped-Topping Example: Summary and Interpretation	818
Exercises	821
DOE Workshop #2: Turning Simulation, TURN9DOE	830
 Chapter 22 Robust Design Case Studies	 832
22.1 Taguchi's Approach to Robust Design	832
22.2 Overview of Approaches to Robust Design	832
22.3 Case Study 1: Fuel Gage Calibration	834
22.4 Case Study 2: Glove Box Closing Effort Analysis	839
22.5 Case Study 3: Automobile Door Closing Effort	844
22.6 Case Study 4: Simultaneous Engineering of a Product and Its Manufacturing Process	846
 Chapter 23 Modeling of Response Surfaces and Response Optimization	 858
23.1 Introduction	858
23.2 Modeling the Response Surface	860
23.3 Response Surface Methodology—A Brief Description	861
23.4 RSM Example—A Pulp Whitening Process	868
23.5 Soldering Process Optimization—A Case Study	881
Exercises	895
DOE Workshop #3: Response Surface Methodology, RSMGAME	904
 References and Further Readings	 906
Appendix Tables	915
Index	927
