PART ONE

Introduction 1

Chapter 1

Overview of Genetics 1

1.1 Genetic Testing 2

1.2 Levels of Genetics 5

DNA 5

Genes, Chromosomes,
and Genomes 5

Cells, Tissues,
and Organs 6

Individual 6

Family 6

Population 6

Evolution 8

1.3 Most Genes Do Not
Function Alone 9

1.4 Statistics Represent
Risks 10

1.5 Applications of
Genetics 11

Establishing Identity and Origins 12

Health Care 14

Agriculture 15

Ecology 16

Genetics from a Global
Perspective 17

Chapter 2

Cells 21

2.1 The Components of
Cells 22

Chemical Constituents of Cells 22

Organelles 24

The Plasma Membrane 29

The Cytoskeleton 30

2.2 Cell Division and Death 33

The Cell Cycle 33

Apoptosis 36

2.3 Cell-Cell Interactions 37

Signal Transduction 37

Cellular Adhesion 38

2.4 Stem Cells and Cell
Specialization 39

Cell Lineages 39

Using Embryos 39

Using Somatic Cells 42

Chapter 3

Development 47

3.1 The Reproductive
System 48

The Male 48

The Female 48

3.2 Meiosis 49

3.3 Gamete Maturation 53

Sperm Formation 53

Oocyte Formation 55

3.4 Prenatal Development 56

Fertilization 56

Cleavage and Implantation 56

The Embryo Forms 58

Supportive Structures Form 59

Multiples 60

The Embryo Develops 62

The Fetus Grows 62

3.5 Birth Defects 64

The Critical Period 64

Teratogens 64

3.6 Maturation and Aging 67

Adult-Onset Inherited Disorders 67

Disorders That Resemble Accelerated

Aging 67

Is Longevity Inherited? 68

PART TWO

Transmission Genetics 75

Chapter 4

Mendelian Inheritance 75

4.1 Following the Inheritance
of One Gene—
Segregation 76

Mendel the Man 76

Mendel's Experiments 76

Terms and Tools to Follow Segregating
Genes 77

4.2 Single-Gene Inheritance in
Humans 80

Modes of Inheritance 80

On the Meaning
of Dominance

and Recessiveness 85

4.3 Following the Inheritance of
Two Genes—Independent
Assortment 85

Mendel's Second Law 85

4.4 Pedigree Analysis 88

Pedigrees Then and Now 88

Pedigrees Display Mendel's Laws 89

Chapter 5

Extensions and Exceptions to Mendel's Laws 95

5.1 When Gene Expression
Appears to Alter
Mendelian Ratios 96

Lethal Allele Combinations 96

Multiple Alleles 96

- Different Dominance Relationships 97
- Epistasis—One Gene Affects Another's Expression 98
- Penetrance and Expressivity 99
- Pleiotropy—One Gene, Many Effects 99
- Phenocopies—When It's Not in the Genes 100
- Genetic Heterogeneity—More Than One Way to Inherit a Trait 100
- The Human Genome Sequence Adds Perspective 101

5.2 Maternal Inheritance and Mitochondrial Genes 101

- Mitochondrial Disorders 102
- Heteroplasmy Complicates Mitochondrial Inheritance 103
- Mitochondrial DNA Studies Clarify the Past 103

5.3 Linkage 103

- Linkage Was Discovered in Pea Plants 103
- Linkage Maps 104
- The Evolution of Gene Mapping 107

Chapter 6

Matters of Sex 113

6.1 Sexual Development 114

- Sex Chromosomes 114
- The Phenotype Forms 115
- Is Homosexuality Inherited? 118

6.2 Traits Inherited on Sex Chromosomes 120

- X-Linked Recessive Inheritance 121
- X-Linked Dominant Inheritance 122

6.3 X Inactivation Equalizes the Sexes 126

6.4 Sex-Limited and Sex-Influenced Traits 128

- Sex-Limited Traits 128
- Sex-Influenced Traits 128

6.5 Genomic Imprinting 129

- Silencing the Contribution From One Parent 129
- Imprinting Disorders in Humans 130
- A Sheep With a Giant Rear End 131

Chapter 7

Multifactorial Traits 135

7.1 Genes and the Environment Mold Most Traits 136

- Polygenic Traits Are Continuously Varying 136
- Fingerprint Patterns 136
- Height 137
- Eye Color 137
- Skin Color 138

7.2 Methods Used to Investigate Multifactorial Traits 140

- Empiric Risk 140
- Heritability 141
- Adopted Individuals 143
- Twins 144
- Association Studies 146

7.3 Two Multifactorial Traits 148

- Heart Health 148
- Weight 149

Chapter 8

The Genetics of Behavior 155

8.1 Genes Contribute to Most Behavioral Traits 156

8.2 Eating Disorders 159

8.3 Sleep 160

- Narcolepsy 160
- Familial Advanced Sleep Phase Syndrome 161

8.4 Intelligence 161

8.5 Drug Addiction 163

8.6 Mood Disorders 164

8.7 Schizophrenia 165

PART THREE

DNA and Chromosomes 171

Chapter 9

DNA Structure and Replication 171

9.1 Experiments Identify and Describe the Genetic Material 172

- DNA Is the Hereditary Molecule 172
- Protein Is Not the Hereditary Molecule 172
- Discovering the Structure of DNA 173

9.2 DNA Structure 175

9.3 DNA Replication—Maintaining Genetic Information 179

- Replication Is Semiconservative 179
- Steps of DNA Replication 181

Chapter 10

Gene Action: From DNA to Protein 185

10.1 Transcription 186

- RNA Structure and Types 186
- Transcription Factors 188
- Steps of Transcription 189
- RNA Processing 190

10.2 Translation of a Protein 192

- Deciphering the Genetic Code 192
- Building a Protein 195

10.3 Protein Folding 197

Chapter 11

Control of Gene Expression 205

11.1 Gene Expression Through Time and Tissue 206

- Globin Chain Switching 206
- Building Tissues and Organs 207
- Proteomics 208

11.2 Mechanisms of Gene Expression 209

- Chromatin Remodeling 210
- RNA Interference 210

11.3 Proteins Outnumber Genes 211

11.4 Most of the Human Genome Does Not Encode Protein 212

- Noncoding (nc) RNAs 213
- Repeats 213

Chapter 12

Gene Mutation 217

12.1 Mutations Can Alter Proteins—Three Examples 218

- The Beta Globin Gene 218
- Disorders of Orderly Collagen 219
- Early-Onset Alzheimer Disease 220
- Multiple Mutations Cause Confusion 221

- 12.2 Causes of Mutation 222**
 Spontaneous Mutation 222
 Induced Mutation 224
 Natural Exposure to Mutagens 225
- 12.3 Types of Mutations 226**
 Point Mutations 226
 Splice Site Mutations 227
 Deletions and Insertions Can Shift the Reading Frame 229
 Pseudogenes and Transposons Revisited 229
 Expanding Repeats 230
- 12.4 The Importance of Position 232**
 Globin Variants 232
 Susceptibility to Prion Disorders 233
- 12.5 Factors That Lessen the Effects of Mutation 233**
- 12.6 DNA Repair 234**
 Types of DNA Repair 234
 DNA Repair Disorders 235

Chapter 13

Chromosomes 241

- 13.1 Portrait of a Chromosome 242**
 Telomeres and Centromeres Are Essential 242
 Karyotypes Are Chromosome Charts 245
- 13.2 Visualizing Chromosomes 246**
 Obtaining Cells for Chromosome Study 246
 Preparing Cells for Chromosome Observation 248
- 13.3 Abnormal Chromosome Number 251**
 Polyploidy 251
 Aneuploidy 251
- 13.4 Abnormal Chromosome Structure 257**
 Deletions and Duplications 257
 Translocations 258
 Inversions 261
 Isochromosomes and Ring Chromosomes 262
- 13.5 Uniparental Disomy—Two Genetic Contributions from One Parent 262**

PART FOUR

Population Genetics 267

Chapter 14

When Allele Frequencies Stay Constant 267

- 14.1 The Importance of Knowing Allele Frequencies 268**
- 14.2 When Allele Frequencies Stay Constant 268**
 Hardy-Weinberg Equilibrium 268
- 14.3 Applying Hardy-Weinberg Equilibrium 270**
- 14.4 DNA Profiling Is Based on Hardy-Weinberg Assumptions 272**
 DNA Profiling Began with Forensics 273
 Population Statistics Are Used to Interpret DNA Profiles 274
 DNA Profiling to Identify Disaster Victims 278
- 14.5 Genetic Privacy 279**

Chapter 15

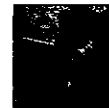

Changing Allele Frequencies 283

- 15.1 Nonrandom Mating 284**
- 15.2 Migration 286**
 Historical Clues 286
 Geographical and Linguistic Clues 287
- 15.3 Genetic Drift 287**
 The Founder Effect 288
 Population Bottlenecks 290
- 15.4 Mutation 291**
- 15.5 Natural Selection 292**
 Tuberculosis Ups and Downs—and Ups 292
 Evolving HIV 293
 Balanced Polymorphism 295
- 15.6 Gene Genealogy 299**
 PKU Revisited 299
 CF Revisited 300

Chapter 16

Human Origins and Evolution 305

- 16.1 Human Origins 306**
 Hominoids and Hominids 306
Australopithecus 306
Homo 308
 Modern Humans 310
- 16.2 Molecular Evolution 311**
 Comparing Genes and Genomes 311
 Comparing Chimps and Humans 312
 Comparing Chromosomes 316
 Comparing Proteins 317
- 16.3 Molecular Clocks 319**
 Neanderthals Revisited 319
 Tracking the Sexes: mtDNA and the Y Chromosome 320
 The African Slave Trade 321
 Native American Origins 322
- 16.4 Eugenics 322**

PART FIVE

Immunity and Cancer 331

Chapter 17

Genetics of Immunity 331

- 17.1 The Importance of Cell Surfaces 332**
 Pathogens 332
 Genetic Control of Immunity 333
 Blood Groups 333
 The Human Leukocyte Antigens 335
- 17.2 The Human Immune System 336**
 Physical Barriers and the Innate Immune Response 336
 The Adaptive Immune Response 338
- 17.3 Abnormal Immunity 341**
 Inherited Immune Deficiencies 341
 Acquired Immune Deficiency Syndrome 342
 Autoimmunity 343
 Allergies 344

17.4 Altering Immune Function 345

- Vaccines 345
- Immunotherapy 346
- Transplants 348

17.5 A Genomic View of Immunity—The Pathogen's Perspective 350

- Crowd Diseases 350
- Bioweapons 351

Chapter 18

The Genetics of Cancer 355

18.1 Cancer Is Genetic, But Usually Not Inherited 356

- From Single Mutations to Sweeping Changes in Gene Expression 356
- Loss of Cell Cycle Control 357
- Inherited Versus Sporadic Cancer 357

18.2 Characteristics of Cancer Cells 359

18.3 Origins of Cancer Cells 361

18.4 Genes Associated with Cancer 363

- Oncogenes 363
- Tumor Suppressors 365

18.5 A Series of Genetic Changes Causes Some Cancers 370

- A Rapidly Growing Brain Tumor 370
- Colon Cancer 370

18.6 Environmental Causes of Cancer 371

- Considering Carcinogens 372

18.7 Human Genome Data Tailor Diagnosis and Treatment 373

PART SIX

Genetic Technologies 377

Chapter 19

Genetic Technologies: Amplifying, Modifying, and Monitoring DNA 377

19.1 Patenting DNA 378

19.2 Amplifying DNA 379

19.3 Modifying DNA 380

- Recombinant DNA Technology and Transgenic Organisms 381
- Gene Targeting 389

19.4 Monitoring Gene Function 390

- Gene Expression Microarrays Track the Aftermath of Spinal Cord Injury 390
- Solving a Problem: Interpreting a DNA Sequence Variation Microarray 392

Chapter 20

Genetic Testing, Genetic Counseling, and Gene Therapy 397

20.1 Genetic Testing and Counseling 398

- Genetic Testing 398
- Genetic Counseling 399
- Genetic Privacy 401

20.2 Treating Genetic Disease 402

- Treating the Phenotype 402
- Gene Therapy 403
- Gene Delivery 404

20.3 Three Gene Therapies 408

- An Early Success 408
- A Major Setback 410
- A Success in the Making 411

20.4 A Closer Look: Treating Sickle Cell Disease 413

20.5 Perspective: A Slow Start, But Great Promise 413

Chapter 21

Reproductive Technologies 417

21.1 Infertility and Subfertility 418

- Male Infertility 418
- Female Infertility 419
- Infertility Tests 420

21.2 Assisted Reproductive Technologies 421

- Donated Sperm—Intrauterine Insemination 421
- A Donated Uterus—Surrogate Motherhood 423
- In Vitro* Fertilization 423
- Gamete and Zygote Intrafallopian Transfer 425
- Oocyte Banking and Donation 425
- Preimplantation Genetic Diagnosis 426

21.3 Extra Embryos 428

Chapter 22

The Age of Genomics 433

22.1 How Genetics Became Genomics 434

22.2 The Human Genome Project Begins 435

- The Sanger Method of DNA Sequencing 435
- Many Goals 438

22.3 Technology Drives the Sequencing Effort 439

22.4 Comparative Genomics 441

22.5 Into the Future 445

Epilogue: Genome Information Will Affect You 446

Answers to End-of-Chapter Questions A-1
