

# Essentials of Soil Mechanics and Foundations

Basic Geotechnics

Seventh Edition

David E. McCarthy

# Contents

## **PART I Background and Basics**

---

**1**

### **CHAPTER 1 The Soil and Rock of Planet Earth: Geologic Overview 3**

- 1.1** Rock: The Source of Soils 4
- 1.2** Soil Categories: Transported, Residual 8
  - Transported Soils* 9
  - Residual Soils* 23
  - Soil Gases and Liquids* 27
- 1.3** Plate Tectonics 29
- 1.4** Effect on Design and Construction 37
  - Problems 38

### **CHAPTER 2 Soil Types and Soil Structure 40**

- 2.1** Major Soil Types 40
- 2.2** Particle Shapes and Sizes 42
- 2.3** Clay and Water 45
- 2.4** Soil Structure 49
- 2.5** Some Special Soil Categories 53
  - Collapsible Soils* 54
  - Liquefaction* 54
  - Expansive Clays* 55
  - Dispersive Clays* 57
  - Laterites* 58
  - Problems 59

### **CHAPTER 3 Soil Composition: Terminology and Definitions 61**

- 3.1** Soil Composition: Analytical Representation 61
  - Weight–Volume, Mass–Volume Relationship* 62
- 3.2** Basic Terms Relating to Soil Composition and Condition 64
- 3.3** Submerged Soil 73
  - Problems 75

## **CHAPTER 4 Index Properties and Classification Tests, and Soil Classification Systems 78**

- 4.1** Index Properties 79
- 4.2** Classification Tests 80
  - Particle Size Distribution (Mechanical Analysis)* 80
  - In-Place Density, In-Place Unit Weight* 85
  - Relative Density* 86
  - Water Content* 89
  - Consistency of Clays* 89
  - Consistency in the Remolded State and Plasticity* 91
  - Presence of Clay Minerals* 93
  - Testing for Dispersive Clays* 94
  - Other Properties* 96
- 4.3** ASTM and AASHTO Test Procedure Designations 96
- 4.4** Classification Systems 97
- 4.5** Application to Transported Soil Deposits and Residual Soil Formations 107
- 4.6** Soil Taxonomy—Global Soil Orders 109
  - Problems 114

## **CHAPTER 5 Site Investigations: Purpose and Methods, Information and Procedures Available 117**

- 5.1** Maps and Aerial Photographs as Sources of Information 119
- 5.2** Borings and Test Pits 122
  - Borings Methods* 123
  - Soil Sampling* 128
  - Sample Spacing in Soil Borings* 131
  - Borings Spacing and Depth* 131
  - Rock Core Drilling* 133
  - Test Pits* 135
- 5.3** Soil Resistance Testing in Boreholes 136
  - Penetration Resistance and the Standard Penetration Test* 136
  - SPT Modifications* 140
  - Penetration Resistance and Cone Penetrometers* 141
- 5.4** Presentation of Borings Information 154
  - Borings Logs, CPT Sounding Logs/Profiles* 154
  - Recognizing Limitations of Borings and Penetrometer Data* 154
- 5.5** In-Place Testing 158
  - In-Place Shear Tests—Vane Shear* 159
  - Slope Inclination Indicator* 159
  - Pore Pressure and Piezometers* 161
  - Dilatometer and Pressuremeter Tests* 164
- 5.6** Groundwater, Soil Water, and Soil Gas Sampling 169
- 5.7** Geophysical Methods 179
  - Seismic Refraction* 179
  - Electrical Resistivity* 185

<i>Correlation between Resistivity and Earth Materials</i>	189
<i>Thickness of Layers</i>	191
<i>Ground-Penetrating Radar</i>	191
<i>Problems</i>	193

## **PART II Engineering Properties and Behavior of Soil Deposits**

**196**

### **CHAPTER 6 Movement of Water through Soil: Basic Hydrogeology, Subsurface Flow, Permeability, Capillarity 197**

<b>6.1 Basic Hydrogeology</b>	198
<i>Subsurface Flow, Basic Facts</i>	198
<b>6.2 Permeability (Hydraulic Conductivity)</b>	202
<i>Factors Affecting Flow</i>	202
<i>Darcy's Law for Flow</i>	207
<i>Laminar and Turbulent Flow</i>	209
<i>Effect of Soil Type</i>	209
<i>Kozeny-Carman Equation for Permeability</i>	210
<i>Empirical Relationships</i>	215
<i>Permeability Tests</i>	217
<i>Laboratory Permeability Tests</i>	218
<i>Field Permeability Tests</i>	221
<b>6.3 Capillarity</b>	221
<i>Water in Capillary Tubes</i>	222
<i>Capillary Rise in Soil</i>	227
<i>Time Rate of Capillary Rise</i>	229
<i>Suspended Capillaries</i>	229
<i>Elimination of Capillary Water in Soil</i>	229
<i>Effects of Surface Tension</i>	229
<i>Problems</i>	230

### **CHAPTER 7 Movement of Water through Soil: Practical Effects: Seepage, Drainage, Frost Heave, Contamination 234**

<b>7.1 Flow Nets and Seepage</b>	234
<i>Flow of Subsurface Water</i>	234
<i>The Need for Flow Nets and Flow Net Theory</i>	235
<i>Boundaries for the Flow Net</i>	240
<i>Flow Nets for Nonisotropic Soils</i>	243
<i>Uplift Forces</i>	245
<i>Other Seepage Forces</i>	245
<i>Practical Considerations</i>	247
<i>Quicksand</i>	247

<b>7.2</b>	<b>Drainage</b>	<b>249</b>
	<i>Conditions Requiring Drainage</i>	250
	<i>Dewatering Shallow Excavations</i>	250
	<i>Dewatering Intermediate Depths</i>	250
	<i>Deep Drainage</i>	255
	<i>Consolidation Drainage</i>	255
	<i>Summary: Techniques for Subsurface Drainage</i>	255
	<i>Drainage after Construction</i>	255
	<i>Foundation Drains</i>	256
	<i>Blanket Drains</i>	257
	<i>Interceptor Drains</i>	258
	<i>Flow Through a Structure</i>	259
	<i>Filter Design (Aggregate Filters)</i>	260
	<i>Drainage, Filtration, Separation, and Protection with Geosynthetics (Synthetic Fabrics)</i>	261
	<i>Land Drainage</i>	269
	<i>Effects of Drainage</i>	269
	<i>Soil Percolation Rate</i>	273
<b>7.3</b>	<b>Frost Heave in Soils</b>	<b>273</b>
	<i>Permafrost</i>	279
<b>7.4</b>	<b>Soil and Groundwater Contamination</b>	<b>281</b>
	<i>Soil Gas</i>	287
	<i>Use of Geosynthetics to Prevent Ground Contamination</i>	291
	<i>Problems</i>	293

## **CHAPTER 8 Combined Stresses in Soil Masses: Stress at a Point and Mohr's Circle 296**

<b>8.1</b>	<b>Stress at a Point: Analytical Development</b>	<b>297</b>
<b>8.2</b>	<b>Mohr's Circle</b>	<b>300</b>
	<i>Problems</i>	307

## **CHAPTER 9 Subsurface Stresses 310**

<b>9.1</b>	<b>Stresses Caused by the Soil Mass</b>	<b>310</b>
	<i>Vertical Stresses</i>	310
	<i>Effect of Groundwater Table</i>	311
	<i>Horizontal (Lateral) Stresses</i>	312
<b>9.2</b>	<b>Stress within the Soil Mass Resulting from Vertical Surface Loading</b>	<b>315</b>
	<i>Uniform Homogeneous Soils</i>	315
	<i>Boussinesq Stress Distribution</i>	315
	<i>Westergaard Stress Distribution</i>	316
	<i>Computational Aids</i>	317
	<i>Application for Foundation Loading</i>	318
	<i>Sixty-Degree Approximation</i>	321
	<i>Layered Soils Having Different Properties</i>	322
	<i>Effect of Foundation Installation Below Finished Grade</i>	324
	<i>Effect of Changing the Surface Grade</i>	325
	<i>Problems</i>	327

## CHAPTER 10 Settlement: Soil Compression, Volume Distortion, Consolidation 332

- 10.1 Basic Considerations 332
- 10.2 Settlement of Foundations on Sand 336
  - Schmertmann Method* 336
  - Dilatometer Method* 341
  - Approximations for Estimating Settlement of Foundations on Sand* 343
- 10.3 Settlement of Foundations on Clay Soils 345
  - Volume Distortion Settlement for Clays* 346
  - Primary Compression Settlement for Clays* 348
  - Secondary Compression of Clay Soil* 363
- 10.4 Settlement Resulting from Earth Fill 364
- 10.5 Consolidation 365
- 10.6 Surcharging 371
  - Acceleration of the Soil Improvement Process* 373
  - Horizontal Drainage* 374
  - Problems 378

## CHAPTER 11 Shear Strength Theory 384

- 11.1 Laboratory Tests 385
  - Direct Shear Test* 385
  - Triaxial Compression Test* 387
  - Plane Strain and Axisymmetrical Strain* 390
  - Unconfined Compression Test* 391
  - Vane-Shear Test* 391
- 11.2 Shear Test Results Plotted on Mohr's Circle Coordinates 393
  - Strength or Failure Envelope* 394
- 11.3 Shearing Strength 396
  - Shearing Strength of Cohesionless Soil* 396
  - Approximating Values of  $\phi$  from Site Investigation Data (SPT, CPT, DMT)* 402
  - Shearing Strength of Clay Soils* 404
  - Shear Strength of Clay Related to Triaxial Testing* 410
  - Approximating Shear Strength of Cohesive Soil from Site Investigation Data (SPT, CPT, DMT, VST)* 416
  - Shear Strength of Mixed Soils* 417
  - Position of Failure Plane Related to Angle  $\phi$*  418
- 11.4 Stress Paths 419
  - Stress Path for Tests in Consolidated–Drained Conditions* 420
  - Stress Path for Tests in Consolidated–Undrained Conditions* 422
  - Applications* 423
  - Problems 425

## CHAPTER 12 Earthquakes and the Effects 429

- 12.1 Causes and Effects 429
- 12.2 Applications to Design 446

NEHRP Provisions (USA) 446  
 Problems 455

## **PART III Application of Soil Mechanics Theories**

**457**

### **CHAPTER 13 Foundations: Introductory Concepts 459**

- 13.1 General Types of Foundations—Foundation Categories 460**  
*Spread Footings 460*  
*Mat (or Raft) Foundations 461*  
*Pile and Pier Foundations 461*  
*Caissons 462*  
*Floating Foundations 463*
- 13.2 Pile Foundation Types and Installation Procedures 463**  
*Pile Drivers for Driven Piles 463*  
*Pile Types and Materials 469*  
*Representative Pile Load Capacities and Available Lengths 480*  
*Methods to Aid Pile Installation 480*  
*Other Installation Considerations 482*
- 13.3 Relating Soil Conditions and Foundation Types 482**  
 Problems 485

### **CHAPTER 14 Foundations: Design Considerations and Methods 488**

- Shallow Foundations—Design and Installation Criteria 489**
- 14.1 Basic Concepts—Long (Strip) Footings 489**
- 14.2 Bearing Capacity Equations 491**  
*Additional Considerations, Bearing Capacity Equation 497*  
*Application for Design—The Extended Bearing Capacity Equation 500*  
*Footings on Slopes 508*
- 14.3 Footing Design Data from Penetration Resistance in Boreholes 510**  
*Standard Penetration Test and Sand 511*  
*Standard Penetration Test and Cohesive Soil 515*  
*Cone Penetrometer Test (CPT) and Sand 516*  
*Static Cone Penetrometer and Cohesive Soil 517*  
*The Pressuremeter and Foundation Design 519*
- 14.4 Effects of Seismic Events 523**  
*Seismic Bearing Capacity of Spread Footing Foundations 523*  
*Seismic-Induced Liquefaction 528*
- 14.5 Presumptive Bearing Pressures 534**
- 14.6 Foundation Walls 535**
- Deep Foundations—Capacity and Installation Criteria 538**
- 14.7 Pile and Pier Foundations 538**  
*Static Analysis (Single Pile Capacity) 539*  
*Effective Stress Method 540*  
*Total Stress Method 550*  
*Factor of Safety 556*

- Negative Shaft Capacity* 556
- Other Design Considerations* 557
- Uplift Capacity (Single Pile)* 557
- Statical Method—Bored Piers and Piles (Drilled Shaft Foundations)* 558
- Arrangement for Piles in a Group* 563
- Group Capacity* 565
- Pile Group Settlement* 567
- Pile Load Tests* 569
- Pile-Driving Formulas* 577
- 14.8** Supervision of Foundation Construction 585
  - Problems 585

## **CHAPTER 15** Site Improvement: Earth Moving, Compaction, and Stabilization 595

- 15.1** Field Procedures—General Considerations, Methods, and Techniques 596
  - Alternative Methods of Transporting Earth Fill* 603
- 15.2** Field Equipment—Surface Zone Compaction 604
  - Surface Compaction Equipment* 604
- 15.3** Deep-Ground Improvement Techniques 613
  - Vibrocompaction* 613
  - Stone Columns: Vibroreplacement, Vibrodisplacement Processes* 618
  - Controlled Modulus Columns (CMC)<sup>TM</sup>* 621
  - Deep Soil Mixing* 621
  - Dynamic Deep Compaction/Consolidation* 625
  - Dynamic Replacement<sup>TM</sup>* 627
  - Compacting by Explosives* 627
  - Vacuum Consolidation* 629
- 15.4** Soil Stabilization 630
  - Use of Natural and Chemical Additives* 630
  - Use of Geosynthetics for Stabilization and Reinforcement* 637
- 15.5** Methods for Establishing Required Soil Density 642
- 15.6** Field Control and Field Density Tests 648
  - Sand-Cone Method* 650
  - Balloon Method* 650
  - Nuclear Moisture–Density Method* 651
  - Problems 654

## **CHAPTER 16** Stability of Unsupported Slopes 657

- 16.1** Types of Slope Movements 658
- 16.2** Isotropic Soils and Uniform Slopes of Infinite Extent 662
  - Cohesionless Soil* 662
  - Soils Possessing Cohesion* 666
- 16.3** Slopes of Finite Extent—Soils Possessing Cohesion 667
  - Types of Rotational Slides in Isotropic Soils* 667
  - Stability Analysis—General Concepts* 668
  - Strength Properties for Analysis—Clay and Mixed Soils* 670
  - Basic Methods for Stability Analysis* 672

	<i>Methods of Slices</i>	673
	<i>Noncircular Slip Surfaces</i>	683
	<i>Effect of Tension Cracks</i>	687
	<i>Sliding Block Analysis</i>	687
<b>16.4</b>	<b>Computational Aids—Slope Stability Charts</b>	<b>689</b>
	<i>Taylor Charts</i>	689
	<i>Bishop-Morganstern, Barnes Charts</i>	694
	<i>Barnes Charts/Tables for Excavated Slopes</i>	701
	<i>Spencer Charts</i>	706
	<i>Morganstern Charts for Rapid Drawdown</i>	709
<b>16.5</b>	<b>Variation in Shear Stress and Factor of Safety</b>	<b>711</b>
<b>16.6</b>	<b>Improving Stability of Slopes</b>	<b>712</b>
	<b>Problems</b>	<b>715</b>

## **CHAPTER 17 Lateral Pressures and Retaining Structures 719**

<b>17.1</b>	<b>Lateral Earth Pressure and Retaining Walls</b>	<b>721</b>
	<i>At-Rest Pressure</i>	721
	<i>Effect of Submergence</i>	723
	<i>Active and Passive Lateral Pressures—Basic Considerations</i>	725
<b>17.2</b>	<b>Earth Pressures against Retaining Walls</b>	<b>729</b>
	<i>Classical Theories</i>	729
<b>17.3</b>	<b>Lateral Pressures Related to Wall Movement</b>	<b>733</b>
	<i>Practical Considerations</i>	733
	<i>Cohesionless Soil Backfill</i>	735
	<i>Goh Analysis</i>	736
	<i>Cohesive Soil Backfill</i>	736
	<i>Recommended Design Criteria for Gravity Walls</i>	739
	<i>Effects of Groundwater and Freezing</i>	739
<b>17.4</b>	<b>Retaining Wall Design Requirements</b>	<b>742</b>
	<i>Common Types of Walls, Construction Considerations</i>	742
	<i>Basic Design Considerations</i>	744
	<i>Surface Loads near Wall</i>	752
	<i>Terzaghi-Peck Charts for Backfill Pressures</i>	753
	<i>Earthquake Forces and Gravity Retaining Walls</i>	754
<b>17.5</b>	<b>Alternate Types of Retaining Structures</b>	<b>758</b>
	<i>Gabion Retaining Walls</i>	758
	<i>Reinforced Earth</i>	760
	<i>Soil Nail Wall and Ground Anchor Wall Systems</i>	761
	<i>Launched Soil Nails</i>	764
<b>17.6</b>	<b>Excavation Bracing</b>	<b>768</b>
	<i>Types and Installation of Excavation Bracing</i>	768
	<i>Lateral Pressures for Designing Bracing</i>	773
<b>17.7</b>	<b>Anchored Bulkheads</b>	<b>777</b>
<b>17.8</b>	<b>Water-Retaining Structures: Dams</b>	<b>781</b>
	<i>Earth Fill Dams</i>	784
	<i>Rockfill Dams</i>	788
	<i>Concrete and Masonry Dams</i>	789
	<b>Problems</b>	<b>798</b>

**APPENDIX A** Application of LaPlace Equation to Flow Nets 803

**APPENDIX B** Laboratory Procedure to Determine Coefficient  
of Consolidation 806

**APPENDIX C** Mathematical Development of the Bishop  
Equation for Slope Stability 810

Bibliography 813

Answers to Selected Problems 830
