Guided Tour xxxi

PART I

LIFE AND DEATH OF MICROORGANISMS

CHAPTER ONE

Humans and the Microbial World 1

A Glimpse of History 1
Key Terms 2

- 1.1** The Origin of Microorganisms 1
Theory of Spontaneous Generation Revisited 2
- 1.2** Microbiology: A Human Perspective 4
Vital Activities of Microorganisms 5
Applications of Microbiology 5
Medical Microbiology 6
Microorganisms as Subjects for Study 9
- 1.3** The Microbial World 9
The *Bacteria* 10
The *Archaea* 10
The *Eucarya* 10
Nomenclature 11
- 1.4** Viruses, Viroids, and Prions 12
- 1.5** Size in the Microbial World 14

PERSPECTIVE 1.1: The Long and the Short of It 15

FUTURE CHALLENGES: Entering a New Golden Age 16

SUMMARY 16

REVIEW QUESTIONS 17

CHAPTER TWO

The Molecules of Life 19

A Glimpse of History 19
Key Terms 20

- 2.1** Atoms and Elements 19
- 2.2** Chemical Bonds and the Formation of Molecules 21
Covalent Bonds 21
Non-Polar and Polar Covalent Bonds 22
Ionic Bonds 22
Hydrogen Bonds 23
- 2.3** Chemical Components of the Cell 24
Water 24
pH 25
Small Molecules in the Cell 25
Macromolecules and Their Component Parts 26
- 2.4** Proteins and Their Functions 27
Amino Acid Subunits 27
Peptide Bonds and Their Synthesis 29
Protein Structure 29
Substituted Proteins 31
- 2.5** Carbohydrates 31
Monosaccharides 31
Disaccharides 32
Polysaccharides 32
- 2.6** Nucleic Acids 33
DNA 33
RNA 35
- 2.7** Lipids 35
Simple Lipids 35
Compound Lipids 36

PERSPECTIVE 2.1: Isotopes: Valuable Tools for the Study of Biological Systems 27

FUTURE CHALLENGES 38

SUMMARY 38

REVIEW QUESTIONS 39

CHAPTER THREE**Microscopy and Cell Structure 41****A Glimpse of History 41****Key Terms 42****MICROSCOPY AND CELL MORPHOLOGY**

- 3.1** Microscopic Techniques: The Instruments 42
Principles of Light Microscopy: The Bright-Field Microscope 42
Light Microscopes That Increase Contrast 46
Electron Microscopes 47
Atomic Force Microscopy 48
- 3.2** Microscopic Techniques: Dyes and Staining 49
Differential Stains 50
Special Stains to Observe Cell Structures 51
Fluorescent Dyes and Tags 52
- 3.3** Morphology of Prokaryotic Cells 53
Shapes 53
Groupings 54
Multicellular Associations 55

THE STRUCTURE OF THE PROKARYOTIC CELL

- 3.4** The Cytoplasmic Membrane 56
Structure and Chemistry of the Cytoplasmic Membrane 56
Permeability of the Cytoplasmic Membrane 57
The Role of the Cytoplasmic Membrane in Energy Transformation 57
- 3.5** Directed Movement of Molecules Across the Cytoplasmic Membrane 58
Transport Systems 58
Secretion 60
- 3.6** Cell Wall 60
Peptidoglycan 61
The Gram-Positive Cell Wall 61
The Gram-Negative Cell Wall 62
Antibacterial Compounds That Target Peptidoglycan 64
Differences in Cell Wall Composition and the Gram Stain 65
Characteristics of Bacteria That Lack a Cell Wall 65
Cell Walls of the Domain *Archaea* 65
- 3.7** Surface Layers External to the Cell Wall 66
Capsules and Slime Layers 66
- 3.8** Filamentous Protein Appendages 66
Flagella 66
Pili 68

- 3.9** Internal Structures 69
The Chromosome 69
Plasmids 69
Ribosomes 70
Storage Granules 70
Gas Vesicles 71
Endospores 71

THE EUKARYOTIC CELL

- 3.10** The Plasma Membrane 73
- 3.11** Transfer of Molecules Across the Plasma Membrane 75
Transport Proteins 75
Endocytosis and Exocytosis 76
Secretion 76
- 3.12** Protein Structures Within the Cell 77
Cytoskeleton 77
Flagella and Cilia 77
- 3.13** Membrane-Bound Organelles 78
The Nucleus 78
Mitochondria 78
Chloroplasts 79
Endoplasmic Reticulum (ER) 79
The Golgi Apparatus 80
Lysosomes and Peroxisomes 81

PERSPECTIVE 3.1: The Origins of Mitochondria and Chloroplasts 80**FUTURE CHALLENGES:** A Case of Breaking and Entering 82

SUMMARY 82

REVIEW QUESTIONS 84

CHAPTER FOUR**Dynamics of Prokaryotic Growth 87****A Glimpse of History 87****Key Terms 88**

- 4.1** Principles of Prokaryotic Growth 87
- 4.2** Bacterial Growth in Nature 89
Biofilms 89
Interactions of Mixed Microbial Communities 89
- 4.3** Obtaining a Pure Culture 90
Cultivating Bacteria on a Solid Culture Medium 90
The Streak-Plate Method 90
Maintaining Stock Cultures 91
- 4.4** Bacterial Growth in Laboratory Conditions 92
The Growth Curve 92
Colony Growth 93
Continuous Culture 93

- 4.5** Environmental Factors That Influence Microbial Growth 94
 - Temperature Requirements 94
 - Oxygen (O₂) Requirements 95
 - pH 96
 - Water Availability 97
- 4.6** Nutritional Factors That Influence Microbial Growth 97
 - Required Elements 97
 - Growth Factors 98
 - Energy Sources 98
 - Nutritional Diversity 99
- 4.7** Cultivating Prokaryotes in the Laboratory 99
 - General Categories of Culture Media 99
 - Special Types of Culture Media 101
 - Providing Appropriate Atmospheric Conditions 102
 - Enrichment Cultures 102
- 4.8** Methods to Detect and Measure Bacterial Growth 103
 - Direct Cell Counts 103
 - Viable Cell Counts 104
 - Measuring Biomass 106
 - Detecting Cell Products 107

PERSPECTIVE 4.1: Can Prokaryotes Live on Only Rocks and Water? 98

FUTURE CHALLENGES: Seeing How the Other 99% Lives 108

SUMMARY 108

REVIEW QUESTIONS 109

CHAPTER FIVE

Control of Microbial Growth 111

A Glimpse of History 111

Key Terms 112

- 5.1** Approaches to Control 111
 - Principles of Control 112
 - Situational Considerations 112
- 5.2** Selection of an Antimicrobial Procedure 114
 - Type of Microorganism 114
 - Numbers of Microorganisms Initially Present 115
 - Environmental Conditions 115
 - Potential Risk of Infection 115
 - Composition of the Item 115
- 5.3** Using Heat to Destroy Microorganisms and Viruses 116
 - Moist Heat 116
 - Dry Heat 118

- 5.4** Using Other Physical Methods to Remove or Destroy Microbes 118
 - Filtration 119
 - Radiation 120
 - High Pressure 121

- 5.5** Using Chemicals to Destroy Microorganisms and Viruses 121
 - Potency of Germicidal Chemical Formulations 121
 - Selecting the Appropriate Germicidal Chemical 122
 - Classes of Germicidal Chemicals 122

- 5.6** Preservation of Perishable Products 126
 - Chemical Preservatives 126
 - Low-Temperature Storage 126
 - Reducing the Available Water 127

PERSPECTIVE 5.1: Contamination of an Operating Room by a Bacterial Pathogen 125

FUTURE CHALLENGES: Too Much of a Good Thing? 127

SUMMARY 128

REVIEW QUESTIONS 129

CHAPTER SIX

Metabolism: Fueling Cell Growth 131

A Glimpse of History 131

Key Terms 132

- 6.1** Principles of Metabolism 131
 - Harvesting Energy 132
 - Components of Metabolic Pathways 133
 - Precursor Metabolites 136
 - Scheme of Metabolism 136
- 6.2** Enzymes 139
 - Mechanisms and Consequences of Enzyme Action 139
 - Cofactors and Coenzymes 140
 - Environmental Factors That Influence Enzyme Activity 141
 - Allosteric Regulation 142
 - Enzyme Inhibition 142
- 6.3** The Central Metabolic Pathways 143
 - Glycolysis 144
 - Pentose Phosphate Pathway 146
 - Transition Step 146
 - Tricarboxylic Acid (TCA) Cycle 146
- 6.4** Respiration 148
 - The Electron Transport Chain—Generating Proton Motive Force 148
 - ATP Synthase—Harvesting the Proton Motive Force to Synthesize ATP 151
 - ATP Yield of Aerobic Respiration in Prokaryotes 151

- 6.5 Fermentation 152
- 6.6 Catabolism of Organic Compounds Other Than Glucose 154
 - Polysaccharides and Disaccharides 154
 - Lipids 154
 - Proteins 154
- 6.7 Chemolithotrophs 154
- 6.8 Photosynthesis 156
 - Capturing Radiant Energy 157
 - Converting Radiant Energy into Chemical Energy 158
- 6.9 Carbon Fixation 160
 - Calvin Cycle 160
- 6.10 Anabolic Pathways—Synthesizing Subunits from Precursor Molecules 161
 - Lipid Synthesis 161
 - Amino Acid Synthesis 161
 - Nucleotide Synthesis 163

PERSPECTIVE 6.1: Mining with Microbes 157

FUTURE CHALLENGES: Going to Extremes 164

SUMMARY 164

REVIEW QUESTIONS 166

CHAPTER SEVEN

The Blueprint of Life, from DNA to Protein 167

A Glimpse of History 167

Key Terms 168

- 7.1 Overview 168
 - Characteristics of DNA 168
 - Characteristics of RNA 169
 - Regulating the Expression of Genes 170
- 7.2 DNA Replication 170
 - Initiation of DNA Replication 172
 - The Replication Fork 172
- 7.3 Gene Expression 173
 - Transcription 174
 - Translation 176
- 7.4 Differences Between Eukaryotic and Prokaryotic Gene Expression 181
- 7.5 Regulating Gene Expression 182
 - Principles of Regulation 182
 - Mechanisms to Control Transcription 183
 - The *lac* Operon As a Model for Control of Metabolic Pathways 184

- 7.6 Sensing and Responding to Environmental Fluctuations 186
 - Signal Transduction 186
 - Natural Selection 187
- 7.7 Genomics 187
 - Analyzing a Prokaryotic DNA Sequence 187

PERSPECTIVE 7.1: RNA: The First Macromolecule? 182

PERSPECTIVE 7.2: From the Junk Pile to Center Stage 184

FUTURE CHALLENGES: Gems in the Genomes? 188

SUMMARY 188

REVIEW QUESTIONS 189

CHAPTER EIGHT

Bacterial Genetics 191

A Glimpse of History 191

Key Terms 192

- 8.1 Diversity in Bacteria 192

GENE MUTATION AS A SOURCE OF DIVERSITY

- 8.2 Spontaneous Mutations 193
 - Base Substitution 193
 - Removal or Addition of Nucleotides 194
 - Transposable Elements (Jumping Genes) 195
- 8.3 Induced Mutations 195
 - Chemical Mutagens 196
 - Transposition 197
 - Radiation 197
- 8.4 Repair of Damaged DNA 197
 - Repair of Errors in Base Incorporation 198
 - Repair of Thymine Dimers 198
 - Repair of Modified Bases in DNA 199
 - SOS Repair 200
- 8.5 Mutations and Their Consequences 200
- 8.6 Mutant Selection 201
 - Direct Selection 201
 - Indirect Selection 201
 - Testing of Chemicals for Their Cancer-Causing Ability 202

GENE TRANSFER AS A SOURCE OF DIVERSITY

- 8.7 DNA-Mediated Transformation 205
 - Natural Competence 205
 - Artificial Competence 207
- 8.8 Transduction 207
- 8.9 Plasmids 208
 - R Plasmids 209

- 8.10** Conjugation 210
 Plasmid Transfer 210
 Chromosome Transfer 211
F' Donors 211
- 8.11** Movement of Mobile Genetic Elements—
 Transposons 213
 Structure of Transposons 214
- PERSPECTIVE 8.1:** The Biological Function of DNA: A Discovery
 Ahead of Its Time 206
- PERSPECTIVE 8.2:** Bacteria Can Conjugate with Plants: A Natural Case
 of Genetic Engineering 212
- FUTURE CHALLENGES:** Hunting for Magic Bullets 215
- SUMMARY 216
 REVIEW QUESTIONS 217

CHAPTER NINE

Biotechnology and Recombinant DNA 219

A Glimpse of History 219
Key Terms 220

- 9.1** Fundamental Tools Used in Biotechnology 220
 Restriction Enzymes 220
 Gel Electrophoresis 221
 DNA Probes 221
 Primers 223

APPLICATIONS OF BIOTECHNOLOGY

- 9.2** Applications of Genetic Engineering 224
 Genetically Engineered Bacteria 224
 Genetically Engineered Eukaryotes 226
- 9.3** Applications of Probe Technologies 227
 Colony Blotting 227
 Southern Blotting 228
 Fluorescence *in situ* Hybridization (FISH) 229
 DNA Microarray Technologies 229
- 9.4** Applications of DNA Sequencing 230
- 9.5** Applications of the Polymerase Chain Reaction
 (PCR) 230
- 9.6** Concerns Regarding DNA Technologies 231

RECOMBINANT DNA TECHNIQUES

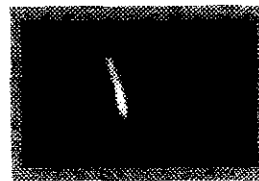

- 9.7** Techniques Used in Genetic Engineering 232
 Obtaining DNA 232
 Generating a Recombinant DNA Molecule 233
 Introducing the Recombinant DNA into a New
 Host 234
- 9.8** Techniques Used in Probe Technologies 235
 Obtaining a Probe 235

Techniques Used in Colony Blotting and Southern
 Blotting 236
 Techniques Used in Fluorescence *in situ*
 Hybridization 236
 Techniques Used in DNA Microarray
 Technologies 236

- 9.9** Techniques Used in DNA Sequencing 236
 Dideoxy Chain Termination Method 236
 Automated DNA Sequencing 238
- 9.10** Techniques Used in the Polymerase Chain Reaction
 (PCR) 238
 The Three-Step Amplification Cycle 239
 Generating a Discrete-Sized Fragment 239
 Selecting Primer Pairs 240

PERSPECTIVE 9.1: Science Takes the Witness Stand 232
FUTURE CHALLENGES: Beyond Genomics 242

SUMMARY 242
 REVIEW QUESTIONS 243

PART II THE MICROBIAL WORLD

CHAPTER TEN

Identification and Classification of Prokaryotes 245

A Glimpse of History 245
Key Terms 246

- 10.1** Principles of Taxonomy 245
 Strategies Used to Identify Prokaryotes 246
 Strategies Used to Classify Prokaryotes 246
 Nomenclature 248
- 10.2** Using Phenotypic Characteristics to Identify
 Prokaryotes 250
 Microscopic Morphology 250
 Metabolic Capabilities 251
 Serology 253
 Fatty Acid Analysis (FAME) 253
- 10.3** Using Genotypic Characteristics to Identify
 Prokaryotes 255
 Nucleic Acid Probes to Detect Specific Nucleotide
 Sequences 255

Amplifying Specific DNA Sequences Using the
Polymerase Chain Reaction 255
Sequencing Ribosomal RNA Genes 255

- 10.4** Characterizing Strain Differences 257
Biochemical Typing 257
Serological Typing 257
Genomic Typing 257
Phage Typing 258
Antibiograms 258

- 10.5** Classifying Prokaryotes 259
16S rDNA Sequence Analysis 261
DNA Hybridization 261
DNA Base Ratio (G + C Content) 261
Phenotypic Methods 262

PERSPECTIVE 10.1: Tracing the Source of an Outbreak of Foodborne
Disease 258

FUTURE CHALLENGES: Tangled Branches in the Phylogenetic
Tree 262

SUMMARY 263

REVIEW QUESTIONS 264

CHAPTER ELEVEN

The Diversity of Prokaryotic Organisms 265

A Glimpse of History 265

Key Terms 266

METABOLIC DIVERSITY

- 11.1** Anaerobic Chemotrophs 270
Anaerobic Chemolithotrophs 270
Anaerobic Chemoorganotrophs—Anaerobic
Respiration 271
Anaerobic Chemoorganotrophs: Fermentation 271
- 11.2** Anoxygenic Phototrophs 273
The Purple Bacteria 273
The Green Bacteria 274
Other Anoxygenic Phototrophs 274
- 11.3** Oxygenic Phototrophs 274
The Cyanobacteria 274
- 11.4** Aerobic Chemolithotrophs 276
The Sulfur-Oxidizing Bacteria 276
The Nitrifiers 277
The Hydrogen-Oxidizing Bacteria 277
- 11.5** Aerobic Chemoorganotrophs 277
Obligate Aerobes 277
Facultative Anaerobes 279

ECOPHYSIOLOGY

- 11.6** Thriving in Terrestrial Environments 280
Bacteria That Form a Resting Stage 280
Bacteria That Associate with Plants 281
- 11.7** Thriving in Aquatic Environments 282
Sheathed Bacteria 282
Prosthecae Bacteria 283
Bacteria That Derive Nutrients from Other
Organisms 284
Bacteria That Move by Unusual Mechanisms 285
Bacteria That Form Storage Granules 286
- 11.8** Animals As Habitats 287
Bacteria That Inhabit the Skin 287
Bacteria That Inhabit Mucous Membranes 287
Obligate Intracellular Parasites 288
- 11.9** Archaea That Thrive in Extreme Conditions 289
Extreme Halophiles 289
Extreme Thermophiles 289

FUTURE CHALLENGES: Astrobiology: The Search for Life on Other
Planets 291

SUMMARY 291

REVIEW QUESTIONS 293

CHAPTER TWELVE

The Eukaryotic Members of the Microbial World 295

A Glimpse of History 295

Key Terms 296

- 12.1** Algae 296
Classification of Algae 297
Algal Habitats 297
Structure of Algae 297
Algal Reproduction 299
Paralytic Shellfish Poisoning 299
- 12.2** Protozoa 300
Classification of Protozoa 301
Protozoan Habitats 301
Structure of Protozoa 302
Protozoan Reproduction 302
Protozoa and Human Disease 303
- 12.3** Fungi 303
Classification of Fungi 304
Fungal Habitats 306
Fungal Disease in Humans 307
Symbiotic Relationships Between Fungi and Other
Organisms 308
Economic Importance of Fungi 308

- 12.4** Slime Molds and Water Molds 309
Acellular and Cellular Slime Molds 309
Oomycetes (Water Molds) 310
- 12.5** Multicellular Parasites: Arthropods and Helminths 310
Arthropods 311
Helminths 312
- PERSPECTIVE 12.1:** How Marine Phytoplankton Help Combat Global Warming 300
- FUTURE CHALLENGES:** Fighting Malaria with Effective Vaccines and Inexpensive Drugs 315
- SUMMARY 315
REVIEW QUESTIONS 316

CHAPTER THIRTEEN

Viruses of Bacteria 319

- A Glimpse of History** 319
Key Terms 320
- 13.1** General Characteristics of Viruses 319
Virus Architecture 320
The Viral Genome 320
Replication Cycle—Overall Features 320
- 13.2** Virus Interactions with Host Cells 323
Lytic Phage Replication by Double-Stranded DNA Phages 323
Lytic Single-Stranded RNA Phages 324
Phage Replication in a Latent State—Phage Lambda 324
Extrusion Following Phage Replication—Filamentous Phages 328
Lytic Infection by Single-Stranded DNA Phages 330
- 13.3** Transduction 330
Generalized Transduction 330
Specialized Transduction 330
- 13.4** Host Range of Phages 331
Receptors on the Bacterial Surface 331
Restriction-Modification System 332

- PERSPECTIVE 13.1:** Viral Soup 326
- FUTURE CHALLENGES:** “Take Two Phage and Call Me in the Morning” 333
- SUMMARY 333
REVIEW QUESTIONS 334

CHAPTER FOURTEEN

Viruses, Prions, and Viroids: Infectious Agents of Animals and Plants 337

- A Glimpse of History** 337
Key Terms 338

- 14.1** Structure and Classification of Animal Viruses 338
Classification of Animal Viruses 338
Groupings Based on Routes of Transmission 340
- 14.2** Interactions of Animal Viruses with Their Hosts 342
Acute Infections 343
Persistent Infections 346
- 14.3** Viruses and Human Tumors 351
Retroviruses and Human Tumors 352
- 14.4** Viral Genetic Alterations 353
Genome Exchange in Segmented Viruses 353
- 14.5** Methods Used to Study Viruses 354
Cultivation of Host Cells 354
Quantitation 356
- 14.6** Plant Viruses 357
Spread of Plant Viruses 358
Insect Transmission of Plant Viruses 359
- 14.7** Other Infectious Agents 359
Prions 359
Viroids 361

- PERSPECTIVE 14.1:** A Whodunit in Molecular Virology 354
- FUTURE CHALLENGES:** Great Promise, Greater Challenges 361
- SUMMARY 362
REVIEW QUESTIONS 363

PART III MICROORGANISMS AND HUMANS

CHAPTER FIFTEEN

The Innate Immune Response 365

- A Glimpse of History** 365
Key Terms 366
- 15.1** Overview of the Innate Defenses 366
- 15.2** First-Line Defenses 367
Physical Barriers 367
Antimicrobial Substances 368
Normal Flora 368
- 15.3** The Cells of the Immune System 369
Granulocytes 371
Mononuclear Phagocytes 372
Dendritic Cells 372
Lymphocytes 372

15.4	Cell Communication 372
	Surface Receptors 372
	Cytokines 373
	Adhesion Molecules 374
15.5	Sensor Systems 374
	Toll-Like Receptors and NOD Proteins 374
	The Complement System 375
	Sensors That Detect Long Double-Stranded RNA (dsRNA) 377
15.6	Phagocytosis 378
	The Process of Phagocytosis 378
	Specialized Attributes of Macrophages 378
	Specialized Attributes of Neutrophils 379
15.7	Inflammation—A Coordinated Response to Invasion or Damage 380
	Factors That Initiate the Inflammatory Response 380
	The Inflammatory Process 380
	Outcomes of Inflammation 380
	Apoptosis—Controlled Cell Death That Circumvents the Inflammatory Process 382
15.8	Fever 382
PERSPECTIVE 15.1: For <i>Schistosoma</i> , the Inflammatory Response Delivers 382	
FUTURE CHALLENGES: Polishing the Magic Bullet 383	
	SUMMARY 384
	REVIEW QUESTIONS 385

CHAPTER SIXTEEN

The Adaptive Immune Response 387

	A Glimpse of History 387
	Key Terms 388
16.1	Strategy of the Adaptive Immune Response 388
	Overview of Humoral Immunity 388
	Overview of Cellular Immunity 390
16.2	Anatomy of the Lymphoid System 390
	Lymphatic Vessels 390
	Secondary Lymphoid Organs 390
	Primary Lymphoid Organs 391
16.3	The Nature of Antigens 391
16.4	The Nature of Antibodies 392
	Structure and Properties of Antibodies 392
	Protective Outcomes of Antibody-Antigen Binding 393
	Immunoglobulin Classes 394

16.5	Clonal Selection and Expansion of Lymphocytes 396
16.6	B Lymphocytes and the Antibody Response 398
	B-Cell Activation 398
	Characteristics of the Primary Response 398
	Characteristics of the Secondary Response 399
	The Response to T-Independent Antigens 400
16.7	T Lymphocytes: Antigen Recognition and Response 401
	General Characteristics of T Cells 401
	Activation of T Cells 402
	Functions of T_C (CD8) Cells 404
	Functions of T_H (CD4) Cells 404
	Subsets of Dendritic Cells and T Cells 406
16.8	Natural Killer (NK) Cells 406
16.9	Lymphocyte Development 406
	Generation of Diversity 407
	Negative Selection of Self-Reactive B Cells 409
	Positive and Negative Selection of Self-Reactive T Cells 410
PERSPECTIVE 16.1: What Flavor Are Your Major Histocompatibility Complex Molecules? 407	
FUTURE CHALLENGES: Defining “Danger” 410	
	SUMMARY 410
	REVIEW QUESTIONS 412

CHAPTER SEVENTEEN

Applications of Immune Responses 413

	A Glimpse of History 413
	Key Terms 414

IMMUNIZATION

17.1	Principles of Immunization 414
	Active Immunity 414
	Passive Immunity 414
17.2	Vaccines and Immunization Procedures 415
	Attenuated Vaccines 415
	Inactivated Vaccines 417
	An Example of Vaccination Strategy—The Campaign to Eliminate Poliomyelitis 418
	The Importance of Routine Immunizations for Children 418
	Current Progress in Immunization 419

IMMUNOLOGICAL TESTING

17.3	Principles of Immunological Testing 421
	Obtaining Antibodies 421
	Quantifying Antigen-Antibody Reactions 423

- 17.4** Observing Antigen-Antibody Aggregations 423
 - Precipitation Reactions 423
 - Agglutination Reactions 426
- 17.5** Using Labeled Antibodies to Detect Antigen-Antibody Interactions 426
 - Fluorescent Antibody (FA) Tests 426
 - Enzyme-Linked Immunosorbent Assay (ELISA) 427
 - Western Blotting 429
 - Fluorescence-Activated Cell Sorter (FACS) 430

PERSPECTIVE 17.1: Monoclonal Antibodies 422

FUTURE CHALLENGES: Global Immunization 430

SUMMARY 430

REVIEW QUESTIONS 431

CHAPTER EIGHTEEN

Immunologic Disorders 433

A Glimpse of History 433

Key Terms 434

- 18.1** Type I Hypersensitivities: Immediate
 - IgE-Mediated 434
 - Localized Anaphylaxis 435
 - Generalized Anaphylaxis 436
 - Immunotherapy 436
- 18.2** Type II Hypersensitivities: Cytotoxic 437
 - Transfusion Reactions 437
 - Hemolytic Disease of the Newborn 438
- 18.3** Type III Hypersensitivities: Immune Complex—Mediated 439
- 18.4** Type IV Hypersensitivities: Delayed Cell-Mediated 440
 - Tuberculin Skin Test 441
 - Contact Hypersensitivities 441
 - Delayed Hypersensitivity in Infectious Diseases 441
- 18.5** Rejection of Transplanted Tissues 442
- 18.6** Autoimmune Diseases 444
 - The Spectrum of Autoimmune Reactions 444
 - Treatment of Autoimmune Diseases 445
- 18.7** Immunodeficiency Disorders 445
 - Primary Immunodeficiencies 446
 - Secondary Immunodeficiencies 447

PERSPECTIVE 18.1: The Fetus As an Allograft 443

FUTURE CHALLENGES: New Approaches to Correcting Immunologic Disorders 447

SUMMARY 448

REVIEW QUESTIONS 449

CHAPTER NINETEEN

Host-Microbe Interactions 451

A Glimpse of History 451

Key Terms 452

MICROBES, HEALTH, AND DISEASE

- 19.1** The Anatomical Barriers As Ecosystems 452
 - Symbiotic Relationships Between Microorganisms and Hosts 452
- 19.2** The Normal Flora 453
 - The Protective Role of the Normal Flora 453
 - The Dynamic Nature of the Normal Flora 454
- 19.3** Principles of Infectious Diseases 454
 - Pathogenicity 454
 - Characteristics of Infectious Disease 454
- 19.4** Establishing the Cause of Infectious Disease 456
 - Koch's Postulates 456
 - Molecular Postulates 456

MECHANISMS OF PATHOGENESIS

- 19.5** Establishment of Infection 457
 - Adherence 457
 - Colonization 458
 - Delivery of Effector Molecules to Host Cells 458
- 19.6** Invasion—Breaching the Anatomical Barriers 459
 - Penetration of Skin 459
 - Penetration of Mucous Membranes 459
- 19.7** Avoiding the Host Defenses 460
 - Hiding Within a Host Cell 460
 - Avoiding Killing by Complement System Proteins 461
 - Avoiding Destruction by Phagocytes 461
 - Avoiding Antibodies 463
- 19.8** Damage to the Host 463
 - Exotoxins 464
 - Endotoxin and Other Bacterial Cell Wall Components 467
 - Damaging Effects of the Immune Response 468
- 19.9** Mechanisms of Viral Pathogenesis 468
 - Binding to Host Cells and Invasion 468
 - Avoiding Immune Responses 469
 - Viruses and Damage to the Host 469
- 19.10** Mechanisms of Eukaryotic Pathogenesis 470
 - Fungi 471
 - Eukaryotic Parasites 471

FUTURE CHALLENGES: Genetics of Pathogenicity 471

SUMMARY 472

REVIEW QUESTIONS 473

CHAPTER TWENTY

Epidemiology 475

A Glimpse of History 475

Key Terms 476

- 20.1** Principles of Epidemiology 476
 - Rate of Disease in a Population 476
 - Reservoirs of Infection 478
 - Portals of Exit 479
 - Transmission 479
 - Portals of Entry 480
 - Factors That Influence the Epidemiology of Disease 481
- 20.2** Epidemiological Studies 482
 - Descriptive Studies 482
 - Analytical Studies 483
 - Experimental Studies 484
- 20.3** Infectious Disease Surveillance 484
 - National Disease Surveillance Network 484
 - Worldwide Disease Surveillance 484
- 20.4** Trends in Disease 485
 - Reduction and Eradication of Disease 485
 - Emerging Diseases 486
- 20.5** Nosocomial Infections 487
 - Reservoirs of Infectious Agents in Hospitals 489
 - Transmission of Infectious Agents in Hospitals 489
 - Preventing Nosocomial Infections 490

PERSPECTIVE 20.1: Standard Precautions—Protecting Patients and Health Care Personnel 488

FUTURE CHALLENGES: Maintaining Vigilance Against Bioterrorism 490

SUMMARY 491

REVIEW QUESTIONS 492

CHAPTER TWENTY-ONE

Antimicrobial Medications 495

A Glimpse of History 495

Key Terms 496

- 21.1** History and Development of Antimicrobial Drugs 495
 - Discovery of Antimicrobial Drugs 495
 - Discovery of Antibiotics 496
 - Development of New Generations of Drugs 496
- 21.2** Features of Antimicrobial Drugs 497
 - Selective Toxicity 497
 - Antimicrobial Action 498
 - Spectrum of Activity 498
 - Tissue Distribution, Metabolism, and Excretion of the Drug 498

Effects of Combinations of Antimicrobial Drugs 498

Adverse Effects 498

Resistance to Antimicrobials 499

Cost 499

- 21.3** Mechanisms of Action of Antibacterial Drugs 499
 - Antibacterial Medications That Inhibit Cell Wall Synthesis 499
 - Antibacterial Medications That Inhibit Protein Synthesis 504
 - Antibacterial Medications That Inhibit Nucleic Acid Synthesis 505
 - Antibacterial Medications That Inhibit Metabolic Pathways 505
 - Antibacterial Medications That Interfere with Cell Membrane Integrity 506
 - Antibacterial Medications That Interfere with Processes Essential to *Mycobacterium tuberculosis* 506
- 21.4** Determining the Susceptibility of a Bacterial Strain to an Antimicrobial Drug 506
 - Determining the Minimum Inhibitory and Bactericidal Concentrations 506
 - Conventional Disc Diffusion Method 507
 - Commercial Modifications of Antimicrobial Susceptibility Testing 508
- 21.5** Resistance to Antimicrobial Drugs 509
 - Mechanisms of Acquired Resistance 509
 - Acquisition of Resistance 510
 - Examples of Emerging Antimicrobial Resistance 511
 - Slowing the Emergence and Spread of Antimicrobial Resistance 512
- 21.6** Mechanisms of Action of Antiviral Drugs 513
 - Viral Uncoating 513
 - Nucleic Acid Synthesis 513
 - Assembly and Release of Viral Particles 514
- 21.7** Mechanisms of Action of Antifungal Drugs 515
 - Plasma Membrane Synthesis and Function 515
 - Cell Wall Synthesis 515
 - Cell Division 515
 - Nucleic Acid Synthesis 516
- 21.8** Mechanisms of Action of Antiprotozoan and Anthelmintic Drugs 516

PERSPECTIVE 21.1: Measuring the Concentration of an Antimicrobial Drug in Blood or Other Body Fluids 508

FUTURE CHALLENGES: War with the Superbugs 518

SUMMARY 518

REVIEW QUESTIONS 520

PART IV INFECTIOUS DISEASES

CHAPTER TWENTY-TWO

Skin Infections 521

A Glimpse of History 521

Key Terms 522

- 22.1** Anatomy and Physiology 521
- 22.2** Normal Flora of the Skin 522
 - Diphtheroids 522
 - Staphylococci 524
 - Fungi 524
- 22.3** Bacterial Skin Diseases 525
 - Hair Follicle Infections 525
 - Scalded Skin Syndrome 526
 - Streptococcal Impetigo 528
 - Rocky Mountain Spotted Fever 529
 - Lyme Disease 532
- 22.4** Skin Diseases Caused by Viruses 536
 - Chickenpox (Varicella) 536
 - Measles (Rubeola) 538
 - German Measles (Rubella) 540
 - Other Viral Rashes of Childhood 542
 - Warts 544
- 22.5** Skin Diseases Caused by Fungi 545
 - Superficial Cutaneous Mycoses 545

CASE PRESENTATION 542

PERSPECTIVE 22.1: The Ghost of Smallpox, An Evil Shade 544

FUTURE CHALLENGES: The Ecology of Lyme Disease 546

SUMMARY 547

REVIEW QUESTIONS 548

CHAPTER TWENTY-THREE

Wound Infections 549

A Glimpse of History 549

Key Terms 550

- 23.1** Anatomy and Physiology 550
 - Wound Abscesses 550
 - Anaerobic Wounds 551

- 23.2** Common Bacterial Wound Infections 552
 - Staphylococcal Wound Infections 552
 - Group A Streptococcal "Flesh Eaters" 554
 - Pseudomonas aeruginosa* Infections 555
- 23.3** Diseases Due to Anaerobic Bacterial Wound Infections 557
 - "Lockjaw" (Tetanus) 557
 - Gas Gangrene (Clostridial Myonecrosis) 559
 - "Lumpy Jaw" (Actinomycosis) 561
- 23.4** Bacterial Bite Wound Infections 563
 - Pasteurella multocida* Bite Wound Infections 563
 - Cat Scratch Disease 565
 - Streptobacillary Rat Bite Fever 565
 - Human Bites 566
- 23.5** Fungal Wound Infections 568
 - "Rose Gardener's Disease" (Sporotrichosis) 568

CASE PRESENTATION 564

PERSPECTIVE 23.1: Infection Caused by a Human "Bite" 567

FUTURE CHALLENGES: Staying Ahead in the Race with *Staphylococcus aureus* 569

SUMMARY 570

REVIEW QUESTIONS 571

CHAPTER TWENTY-FOUR

Respiratory System Infections 573

A Glimpse of History 573

Key Terms 574

- 24.1** Anatomy and Physiology 573
 - The Mucociliary Escalator 576
- 24.2** Normal Flora 576
- INFECTIONS OF THE UPPER RESPIRATORY SYSTEM**
- 24.3** Bacterial Infections of the Upper Respiratory System 577
 - Strep Throat (Streptococcal Pharyngitis) 577
 - Diphtheria 579
 - Pinkeye, Earache, and Sinus Infections 583
- 24.4** Viral Infections of the Upper Respiratory System 585
 - The Common Cold 585
 - Adenoviral Pharyngitis 586

INFECTIONS OF THE LOWER RESPIRATORY SYSTEM

- 24.5** Bacterial Infections of the Lower Respiratory System 587
 - Pneumococcal Pneumonia 588

Klebsiella Pneumonia 589
 Mycoplasmal Pneumonia 590
 Whooping Cough (Pertussis) 591
 Tuberculosis 593
 Legionnaires' Disease 595

- 24.6** Viral Infections of the Lower Respiratory System 597
 Influenza 597
 Respiratory Syncytial Virus Infections 600
 Hantavirus Pulmonary Syndrome 601
- 24.7** Fungal Infections of the Lung 602
 Valley Fever (Coccidioidomycosis) 602
 Spelunkers' Disease (Histoplasmosis) 603

CASE PRESENTATION 605

PERSPECTIVE 24.1: Terror by Mail: Inhalation Anthrax 591

FUTURE CHALLENGES: Global Preparedness Vs. Emerging Respiratory Viruses 606

SUMMARY 606

REVIEW QUESTIONS 607

CHAPTER TWENTY-FIVE

Digestive System Infections 609

A Glimpse of History 609

Key Terms 610

- 25.1** Anatomy and Physiology 609
 The Mouth 610
 Salivary Glands 610
 The Esophagus 610
 The Stomach 610
 The Small Intestine 610
 The Pancreas 612
 The Liver 612
 The Large Intestine 612
- 25.2** Normal Flora 612
 The Mouth 613
 Intestines 613

UPPER DIGESTIVE SYSTEM INFECTIONS

- 25.3** Bacterial Diseases of the Upper Digestive System 614
 Teeth Decay (Dental Caries) 614
 Periodontal Disease 615
 Trench Mouth 616
Helicobacter pylori Gastritis 617
- 25.4** Viral Diseases of the Upper Digestive System 619
 Herpes Simplex 619
 Mumps 620

LOWER DIGESTIVE SYSTEM INFECTIONS

- 25.5** Bacterial Diseases of the Lower Digestive System 622
 Cholera 623
 Shigellosis 625
Escherichia coli Gastroenteritis 627
 Salmonellosis 628
 Campylobacteriosis 630
- 25.6** Viral Diseases of the Lower Digestive System 631
 Rotaviral Gastroenteritis 631
 Norovirus Gastroenteritis 632
 Hepatitis A 633
 Hepatitis B 634
 Hepatitis C 636
- 25.7** Protozoan Diseases of the Lower Digestive System 638
 Giardiasis 638
 Cryptosporidiosis 639
 Cyclosporiasis 640
 Amebiasis 641

CASE PRESENTATION 620

PERSPECTIVE 25.1: Ecology of Cholera 624

FUTURE CHALLENGES: Defeating Diarrhea 643

SUMMARY 644

REVIEW QUESTIONS 646

CHAPTER TWENTY-SIX

Genitourinary Infections 649

A Glimpse of History 649

Key Terms 650

- 26.1** Anatomy and Physiology 650
 The Urinary System 650
 The Genital System 650
- 26.2** Normal Flora of the Genitourinary System 651
- 26.3** Urinary System Infections 652
 Bacterial Cystitis 652
 Leptospirosis 653
- 26.4** Non-Venereal Genital System Diseases 656
 Bacterial Vaginosis 656
 Vulvovaginal Candidiasis 657
 Staphylococcal Toxic Shock Syndrome 658
- 26.5** Sexually Transmitted Diseases: Scope of the Problem 659
- 26.6** Bacterial STDs 661
 Gonorrhea 661
 Chlamydial Genital System Infections 663

Syphilis 664
Chancroid 667

- 26.7** Viral STDs 669
Genital Herpes Simplex 669
Papillomavirus STDs: Genital Warts and Cervical Cancer 670
AIDS 672

- 26.8** Protozoal STDs 674
“Trich” (Trichomoniasis) 674

CASE PRESENTATION 654

PERSPECTIVE 26.1: The Demise of Syphilis? 666

FUTURE CHALLENGES: Getting Control of Sexually Transmitted Diseases 675

SUMMARY 676

REVIEW QUESTIONS 678

CHAPTER TWENTY-SEVEN

Nervous System Infections 681

A Glimpse of History 681

Key Terms 682

- 27.1** Anatomy and Physiology 682
Pathways to the Central Nervous System 683
- 27.2** Bacterial Nervous System Infections 684
Meningococcal Meningitis 685
Listeriosis 687
Hansen’s Disease (Leprosy) 688
Botulism 690
- 27.3** Viral Diseases of the Nervous System 692
Viral Meningitis 692
Viral Encephalitis 693
Infantile Paralysis, Polio (Poliomyelitis) 695
Rabies 697
- 27.4** Fungal Diseases of the Nervous System 699
Cryptococcal Meningoencephalitis 700
- 27.5** Protozoan Diseases of the Nervous System 701
African Sleeping Sickness 701
- 27.6** Transmissible Spongiform Encephalopathies 703
Transmissible Spongiform Encephalopathy
Humans 703

CASE PRESENTATION 689

PERSPECTIVE 27.1: A Rabies Survivor! 697

FUTURE CHALLENGES: Eradicate Polio: Then What? 704

SUMMARY 704

REVIEW QUESTIONS 706

CHAPTER TWENTY-EIGHT

Blood and Lymphatic Infections 709

A Glimpse of History 709

Key Terms 710

- 28.1** Anatomy and Physiology 710
The Heart 710
Arteries 710
Veins 711
Lymphatics 711
Spleen 711
- 28.2** Bacterial Diseases of the Blood Vascular System 712
Subacute Bacterial Endocarditis 712
Gram-Negative Septicemia 713
- 28.3** Bacterial Diseases of the Lymph Nodes and Spleen 715
“Rabbit Fever” (Tularemia) 715
“Undulant Fever” (Brucellosis, “Bang’s Disease”) 716
“Black Death” (Plague) 717
- 28.4** Viral Diseases of the Lymphoid and Blood Vascular Systems 721
“Kissing Disease” (Infectious Mononucleosis, “Mono”) 721
Yellow Fever 724
- 28.5** Protozoan Diseases 725
Malaria 725

CASE PRESENTATION 723

PERSPECTIVE 28.1: Arteriosclerosis: The Infection Hypothesis 711

PERSPECTIVE 28.2: Walter Reed and Yellow Fever 726

FUTURE CHALLENGES: Rethinking Malaria Control 729

SUMMARY 729

REVIEW QUESTIONS 730

CHAPTER TWENTY-NINE

HIV Disease and Complications of Immunodeficiency 733

A Glimpse of History 733

Key Terms 734

- 29.1** Human Immunodeficiency Virus (HIV) Infection and AIDS 734
HIV Disease 735
HIV Vaccine Prospects 745
- 29.2** Malignant Tumors That Complicate Acquired Immunodeficiencies 746
Kaposi’s Sarcoma 747
B-Lymphocytic Tumors of the Brain 747
Cervical and Anal Carcinoma 748

- 29.3** Infectious Complications of Acquired Immunodeficiency 748
 Pneumocystosis 749
 Toxoplasmosis 749
 Cytomegalovirus Disease 752
 Mycobacterial Diseases 754

CASE PRESENTATION 744

PERSPECTIVE 29.1: Origin of AIDS-Causing Viruses 741

FUTURE CHALLENGES: AIDS and Poverty 755

SUMMARY 756

REVIEW QUESTIONS 757

PART V
APPLIED MICROBIOLOGY

CHAPTER THIRTY
Microbial Ecology 759

A Glimpse of History 759

Key Terms 760

- 30.1** Principles of Microbial Ecology 760
 Nutrient Acquisition 760
 Bacteria in Low-Nutrient Environments 761
 Microbial Competition and Antagonism 761
 Microorganisms and Environmental Changes 762
 Microbial Communities 762
 Studying Microbial Ecology 763
- 30.2** Aquatic Habitats 763
 Marine Environments 764
 Freshwater Environments 765
 Specialized Aquatic Environments 765
- 30.3** Terrestrial Habitats 766
 Characteristics of Soil 766
 Microorganisms in Soil 766
 The Rhizosphere 767
- 30.4** Biogeochemical Cycling and Energy Flow 767
 Carbon Cycle 767
 Nitrogen Cycle 769
 Sulfur Cycle 770
 Phosphorus Cycle and Other Cycles 771
 Energy Sources for Ecosystems 771

- 30.5** Mutualistic Relationships Between Microorganisms and Eukaryotes 772
 Mycorrhizae 772
 Symbiotic Nitrogen-Fixers and Plants 773
 Microorganisms and Herbivores 774

PERSPECTIVE 30.1: Life on Mars? 764

FUTURE CHALLENGES: Healing the Environment 775

SUMMARY 775

REVIEW QUESTIONS 776

CHAPTER THIRTY-ONE
Environmental Microbiology: Treatment of Water, Wastes, and Polluted Habitats 779

A Glimpse of History 779

Key Terms 780

- 31.1** Microbiology of Wastewater Treatment 780
 Biochemical Oxygen Demand (BOD) 780
 Municipal Wastewater Treatment Methods 780
 Individual Wastewater Treatment Systems 785
- 31.2** Drinking Water Treatment and Testing 786
 Water Treatment Processes 787
 Water Testing 787
- 31.3** Microbiology of Solid Waste Treatment 788
 Sanitary Landfills for Solid Waste Disposal 789
 Municipal and Backyard Composting—Alternative to Landfills 789
- 31.4** Microbiology of Bioremediation 790
 Pollutants 790
 Means of Bioremediation 791

PERSPECTIVE 31.1: Now They're Cooking with Gas 784

FUTURE CHALLENGES: Better Identification of Pathogens in Water and Wastes 792

SUMMARY 792

REVIEW QUESTIONS 793

CHAPTER THIRTY-TWO
Food Microbiology 795

A Glimpse of History 795

Key Terms 796

- 32.1** Factors Influencing the Growth of Microorganisms in Foods 796
 Intrinsic Factors 797
 Extrinsic Factors 797

32.2	Microorganisms in Food and Beverage Production	798
	Lactic Acid Fermentations by the Lactic Acid Bacteria	798
	Alcoholic Fermentations by Yeast	800
	Changes Due to Mold Growth	805
32.3	Food Spoilage	805
	Common Spoilage Bacteria	805
	Common Spoilage Fungi	805
32.4	Foodborne Illness	806
	Foodborne Intoxication	806
	Foodborne Infection	807
32.5	Food Preservation	808
PERSPECTIVE 32.1:	Botox for Beauty and Pain Relief	807
FUTURE CHALLENGES:	Using Microorganisms to Nourish the World	809
