
SYSTEM ENGINEERING MANAGEMENT

THIRD EDITION

Benjamin S. Blanchard

CONTENTS

Foreword xi

Preface xiii

1 Introduction to System Engineering 1

1.1 The Current Environment / 2

1.2 The Need for System Engineering / 7

Definition of *System*; Categories of Systems; The System Life Cycle; Definition of *System Engineering*; System Architecture; System Science; System Analysis; Some Additional System Models; System Engineering in the Life Cycle

1.3 Related Terms and Definitions / 29

Concurrent/Simultaneous Engineering; Integrated Product and Process Development (IPPD); Logistics and Supply Chain Management; Integrated System Maintenance and Support; Configuration Management (CM); Total Quality Management (TQM); Total System Value and Life-Cycle Cost (LCC)

1.4 System Engineering Management / 40

1.5 Summary / 44

Questions and Problems / 44

2 The System Engineering Process 46

2.1 Definition of The Problem (Current Deficiency) / 48

2.2 Development of Consumer Need / 49

2.3 System Feasibility Analysis / 49

2.4 System Operational Requirements / 50

2.5 The Maintenance and Support Concept / 53

2.6 Identification and Prioritization of Technical Performance Measures (TPMs) / 60

2.7 Functional Analysis / 63
Functional Flow Block Diagrams (FFBDs); Operational Functions; Maintenance and Support Functions; Application of Functional Analysis

2.8 Requirements Definition and Allocation / 79
Functional Packaging and Partitioning; Allocation of System-Level Requirements to the Subsystem Level and Below; Traceability of Requirements (Top-Down/Bottom-Up)

2.9 System Synthesis, Analysis, and Design Optimization / 84

2.10 Design Integration / 93

2.11 System Test and Evaluation / 96
Categories of Test and Evaluation; Integrated Test Planning; Preparation for Test and Evaluation; Test Performance, Data Collection, Analysis, and Validation; System Modifications

2.12 Production and/or Construction / 104

2.13 System Operational Utilization and Sustaining Support / 105

2.14 System Retirement and Material Recycling/Disposal / 106

2.15 Summary / 107

Questions and Problems / 107

3 System Design Requirements **110**

3.1 Development of Design Requirements and "Design-To" Criteria / 113

3.2 Development of Specifications / 114

3.3 The Integration of System Design Activities / 120

3.4 Selected Design Engineering Disciplines / 124
Software Engineering; Reliability Engineering; Maintainability Engineering; Human Factors Engineering; Safety Engineering; Security Engineering; Manufacturing and Production Engineering; Logistics and Supportability Engineering; Disposability Engineering; Quality Engineering; Environmental Engineering; Value/Cost Engineering (Life-Cycle Costing)

3.5 Summary / 192

Questions and Problems / 196

4 Engineering Design Methods and Tools **201**

4.1 Conventional Design Practices / 202

4.2 Analytical Methods / 204

4.3 The Role of Electronic Commerce (EC), Information Technology (IT), and the Internet / 206

4.4 Current Design Technologies and Tools / 207
The Use of Simulation in System Engineering; The Use of Rapid Prototyping; The Use of Mock-ups
4.5 Computer-Aided Design (CAD) / 213
4.6 Computer-Aided Manufacturing (CAM) / 221
4.7 Computer-Aided Support (CAS) / 222
4.8 Summary / 224
Questions and Problems / 224

5 Design Review and Evaluation **226**

5.1 Design Review and Evaluation Requirements / 227
5.2 Informal Day-to-Day Review and Evaluation / 229
5.3 Formal Design Reviews / 233
Conceptual Design Review; System Design Reviews; Equipment/Software Design Reviews; Critical Design Review
5.4 The Design Change and System Modification Process / 242
5.5 Summary / 246
Questions and Problems / 246

6 System Engineering Program Planning **248**

6.1 System Engineering Program Requirements / 251
The Need for Early System Planning; Determination of Program Requirements
6.2 System Engineering Management Plan (SEMP) / 254
Statement of Work; Definition of System Engineering Functions and Tasks; System Engineering Organization; Development of a Work Breakdown Structure (WBS); Specification/Documentation Tree; Technical Performance Measurement (TPM); Development of Program Schedules; Preparation of Cost Projections; Technical Reviews and Audits; Program Reporting Requirements
6.3 Determination of "Outsourcing" Requirements / 300
Identification of Potential Suppliers; Development of a "Request for Proposal (RFP)"; Review and Evaluation of Supplier Proposals; Selection of Suppliers and Contract Negotiation; Supplier Monitoring and Control
6.4 Integration of Design Specialty Plans / 320
6.5 Interfaces with Other Program Activities / 322
6.6 Management Methods/Tools / 326
6.7 Risk Management Plan / 327

6.8 Global Applications/Relationships / 331
6.9 Summary / 332
Questions and Problems / 334

7 Organization for System Engineering **337**
7.1 Developing the Organizational Structure / 338
7.2 Customer, Producer, and Supplier Relationships / 339
7.3 Customer Organization and Functions / 341
7.4 Producer Organization and Functions (The "Contractor") / 343
Functional Organizational Structure; Product-Line/Project Organizational Structure; Matrix Organizational Structure; Integrated Product and Process Development (IPPD); Integrated Product/Process Teams (IPTs); System Engineering Organization
7.5 Supplier Organization and Functions / 360
7.6 Human Resource Requirements / 365
Creating the Organizational Environment; Leadership Characteristics; The Needs of the Individual; Staffing the Organization; Personnel Development and Training
7.7 Summary / 376
Questions and Problems / 377

8 System Engineering Program Evaluation **379**
8.1 Evaluation Requirements / 380
8.2 Benchmarking / 381
8.3 Evaluation of the System Engineering Organization / 383
8.4 Program Reporting, Feedback, and Control / 389
8.5 Summary / 390
Questions and Problems / 391

Appendix A Selected Bibliography **393**
Appendix B Case Studies **403**
Appendix C Life-Cycle Cost-Analysis Process **434**
Appendix D Design Review Checklist **456**
Appendix E Supplier Evaluation Checklist **478**
Appendix F List of Abbreviations **486**
Index **490**
