Warehouse Management

Automation and Organisation of
Warehouse and Order Picking Systems

Springer

Contents

1.	Introduction	1
1.1	Requirements	2
1.1.1	Warehousing	2
1.1.2	Characteristics of warehouse systems	4
1.1.3	Optimization of warehouse systems	5
1.2	Warehouse Management	6
1.3	System interfaces and definitions	7
1.4	Structure and goal of this book	11
2.	Management of Warehouse Systems	13
2.1	Logistic frameworks	13
2.1.1	Logistic principles	13
2.1.2	Packaging and logistic units	16
2.2	Functions in warehouse systems	20
2.2.1	Goods acceptance and receipt	20
2.2.2	Storage	25
2.2.3	Retrieval / picking	28
2.2.4	Consolidation point	30
2.2.5	Order-picking	30
2.2.6	Packaging department	44
2.2.7	Shipping department	45
2.3	Warehouse management system	46
2.3.1	Warehouse management	46
2.3.2	Reorganization	50
2.3.3	Conveyor management and control systems	50
2.3.4	Data collection, processing and visualization	51
2.3.5	Stocktaking	53
2.4	Basic data and key performance indicators of warehouse systems	56
2.4.1	Basic data	56
2.4.2	Logistic key performance indicators	57
2.5	Special procedures and methods	59
2.5.1	Cross docking	59
2.5.2	Outsourcing of the physical distribution and warehousing processes	61

2.5.3 Application Service Providing	62
3. Fundamentals of an Operational Optimization	63
3.1 Optimization in short	63
3.1.1 Background	63
3.1.2 Classification of the operational optimization	65
3.1.3 Terms and elements of dispatching	67
3.2 Optimization processes in a warehouse	68
3.2.1 Transport optimization.....	68
3.2.2 Sequencing of picking orders	76
3.2.3 Routing in the warehouse	78
3.2.4 Comprehensive order dispatching	79
3.3 Optimization of solutions	81
3.3.1 General aspects	81
3.3.2 Overview over the optimization procedures	82
3.3.3 Examples of known methods	84
4. Warehousing and Conveying Principles	91
4.1 Warehouse systems	91
4.1.1 Ground store	92
4.1.2 Statical racking systems	94
4.1.3 Dynamical racking system	102
4.1.4 Pre-rack zone	105
4.2 Transport systems	106
4.2.1 Conveyors	107
4.2.2 Transporters	110
4.3 Sorting and distribution systems	126
4.3.1 Applications	126
4.3.2 The basic structure of sorting systems	128
4.3.3 Distribution technology	132
4.3.4 Control and strategies	135
4.4 Robots in warehouse systems	136
4.4.1 Palletizing robots.....	136
4.4.2 Order-picking robots	136
5. Automation of the Material Flow	137
5.1 Basics of automation	137
5.1.1 History of the material flow automation	138
5.1.2 Terms and definitions	139
5.1.3 The structure of control systems	140
5.2 Control engineering	144
5.2.1 Classification of controls.....	144
5.2.2 Programmable logic controllers.....	147
5.2.3 Computer control	152
5.3 Sensors.....	153

5.3.1	Sensor classifications	153
5.3.2	Mechanically operated sensors	154
5.3.3	Optical sensors	154
5.3.4	Magnetic and inductive sensors	158
5.3.5	Ultrasonic sensors	159
5.4	Actuators	160
5.4.1	The tasks and structures of actuator systems	160
5.4.2	Electrical drives	162
5.4.3	Fluid drives	168
5.5	Interfaces in automation systems	169
5.5.1	Analogous and binary data transmission	170
5.5.2	Digital data transmission	171
5.5.3	Field bus systems	173
6.	Automatic Identification	179
6.1	Codes and characters	179
6.1.1	Encoding	180
6.1.2	Encoding examples	180
6.2	1D-Codes	181
6.2.1	Code 2/5	182
6.2.2	Check digit calculation Code 2/5	185
6.2.3	Code 2/5 interleaved	186
6.2.4	Code 128	188
6.2.5	Check digit calculation code 128	191
6.2.6	The character sets of the code 128	192
6.2.7	Mixed character sets in code 128 and their optimization	194
6.2.8	Code sizes, tolerances and reading distances	195
6.3	Printing method and quality	197
6.3.1	Labelling techniques	197
6.3.2	Quality requirements	198
6.3.3	Selection of the printing technique	198
6.4	Semantics in the code: EAN 128	200
6.4.1	Global location numbering (GLN)	201
6.4.2	International article number (EAN)	203
6.4.3	Serial shipping container code (SSCC)	203
6.4.4	Characteristics of the code EAN 128	204
6.5	Scanner technology, devices, interfaces	208
6.5.1	Barcode scanner	208
6.5.2	Handheld scanners	208
6.5.3	Stationary scanners	209
6.6	2D-Codes	210
6.6.1	Stacked barcodes	211
6.6.2	Matrix codes	212
6.7	Radio frequency identification	214

6.7.1	Functioning and technical structure	214
6.7.2	Fields of application	219
6.7.3	Comparison with barcode systems	220
7.	Information and Communication Technology	221
7.1	Communication technology	221
7.1.1	Layered architectures	222
7.1.2	Protocols	222
7.1.3	Transmission media	225
7.1.4	Network types and internetworking	227
7.1.5	Network addresses	230
7.1.6	Examples	232
7.2	Data management	235
7.2.1	Principles	235
7.2.2	File systems	237
7.2.3	Databases	238
7.2.4	Availability of data	243
7.3	User interface	245
7.3.1	Terminals	246
7.3.2	Functional point of view	247
7.3.3	Access control	248
7.3.4	Internationalization	249
7.3.5	Help systems and help functions	249
7.4	Operating systems	250
7.4.1	Tasks	250
7.4.2	Principles	252
7.5	Programming languages	261
7.5.1	Compilers and interpreters	261
7.5.2	Language concepts	264
7.5.3	Language generations	264
7.6	Basic principles of object-oriented programming	266
7.6.1	Data abstraction	266
7.6.2	Classes and objects	268
7.6.3	Inheritance	269
7.6.4	Unified modelling language	271
7.7	Extensible markup language: XML	271
7.7.1	Key-value-coding	271
7.7.2	The syntax of XML	274
7.7.3	Parsers and processors	275
7.7.4	Variety with style sheets	276
7.8	Safety aspects	277
7.8.1	Secrecy	278
7.8.2	Integrity assurance	280
7.8.3	Authentication	280

7.8.4	Authentication and electronic signature	281
8.	Realization of Warehouse Management Systems	283
8.1	Requirement definition	284
8.1.1	As-is analysis	285
8.1.2	Weak-point analysis	286
8.1.3	Development of a target concept	287
8.2	Preparation of the tender documents	287
8.2.1	Definition of the key performance indicators	288
8.2.2	Preparation of the technical specifications	289
8.2.3	Completion of the tender documents	292
8.3	The placement of an order	293
8.3.1	Preselection of providers	293
8.3.2	Comparison of offers	293
8.3.3	Offer presentation	293
8.3.4	Selection of a provider	296
8.4	Implementation	296
8.4.1	Preparation of the technical specifications	296
8.4.2	Realization	300
8.4.3	Project management / Quality assurance	301
8.5	Start-up	301
8.5.1	Test phase	301
8.5.2	Changeover from old to new WMS	302
8.5.3	Training	302
8.6	Acceptance	302
8.6.1	Performance test	303
8.6.2	Failure simulation and emergency strategies	303
8.6.3	Formal acceptance	304
9.	Structure of a WMS from the Example of myWMS	307
9.1	Data model	307
9.1.1	Data container of the model	308
9.1.2	Data interrelations	310
9.1.3	Interfaces	313
9.2	Classical implementation of a WMS	313
9.2.1	Functional structure	313
9.2.2	Table structure	315
9.2.3	Securing the logical integrity	318
9.2.4	Generation and query of master data	318
9.3	myWMS	320
9.3.1	The basic structure of myWMS	320
9.3.2	Business objects	323
9.3.3	Kernel concept	324
9.3.4	Runtime environment	326
9.4	Example of a distribution system using myWMS	327

XII Contents

9.4.1	Description of the example	327
9.4.2	Topology structure	333
9.4.3	Plug-In – Routing	335
9.4.4	Communication	336
Abbreviations	341
Bibliography	345
Index	351
