# STATIC HEADSPACE-GAS CHROMATOGRAPHY

Theory  
and  
Practice

Second Edition

BRUNO KOLB  
LESLIE S. ETTRE

# Contents

<b>Preface</b>	<b>xi</b>
<b>Preface to the First Edition</b>	<b>xv</b>
<b>List of Acronyms and Symbols</b>	<b>xix</b>
<b>1 General Introduction</b>	<b>1</b>
1.1 Principles of Headspace Analysis	1
1.2 Types of Headspace Analysis	3
1.2.1 Principles of Static HS-GC	4
1.2.2 Principles of Dynamic HS-GC	5
1.2.2.1 The Trap	5
1.2.2.2 The Water Problem	7
1.2.2.3 The Flow Problem	7
1.2.2.4 The Time Problem	8
1.2.2.5 Comparison of Static HS-GC with P&T	9
1.3 The Evolution of the HS-GC Methods	10
1.4 HS-GS Literature	12
1.5 Regulatory Methods Utilizing (Static) HS-GC	13
References	15
<b>2 Theoretical Background of HS-GC and Its Applications</b>	<b>19</b>
2.1 Basic Theory of Headspace Analysis	19
2.2 Basic Physicochemical Relationships	23
2.3 Headspace Sensitivity	25
2.3.1 Influence of Temperature on Vapor Pressure and Partition Coefficient	26
2.3.1.1 Enhancement of Lower Boiling Compounds	28
2.3.2 Influence of Temperature on Headspace Sensitivity for Compounds with Differing Partition Coefficients	29
2.3.3 Influence of Sample Volume on Headspace Sensitivity for Compounds with Differing Partition Coefficients	34
2.3.3.1 Sample-to-Sample Reproducibility	36

2.3.4	Changing the Sample Matrix by Varying the Activity Coefficient	37
2.4	Headspace Linearity	42
2.5	Duplicate Analyses	43
2.6	Multiple Headspace Extraction (MHE)	45
2.6.1	Principles of MHE	45
2.6.2	Theoretical Background of MHE	46
2.6.3	Simplified MHE Calculation	49
	References	49
<b>3</b>	<b>The Technique of HS-GC</b>	<b>51</b>
3.1	Sample Vials	53
3.1.1	Vial Types	53
3.1.2	Selection of the Vial Volume	54
3.1.3	Vial Cleaning	55
3.1.4	Wall Adsorption Effects	55
3.2	Caps	56
3.2.1	Pressure on Caps	58
3.2.2	Safety Closures	58
3.3	Septa	58
3.3.1	Septa Types	58
3.3.2	Septum Blank	60
3.3.3	Should a Septum Be Pierced Twice?	62
3.3.3.1	Closed-Vial versus Open-Vial Sample Introduction Technique	65
3.4	Thermostating	66
3.4.1	Influence of Temperature	66
3.4.2	Working Modes	69
3.5	The Fundamental Principles of Headspace Sampling Systems	70
3.5.1	Systems Using Gas Syringes	70
3.5.2	Solid Phase Microextraction (SPME)	73
3.5.2.1	Comparison of the Sensitivities in HS-SPME and Direct Static HS-GC	80
3.5.3	Balanced Pressure Sampling Systems	81
3.5.4	Pressure/Loop Systems	83
3.5.5	Conditions for Pressurization Systems	84
3.5.6	Volume of the Headspace Gas Sample	86
3.5.6.1	Sample Volume with Gas Syringes	87
3.5.6.2	Sample Volume with Loop Systems	87
3.5.6.3	Sample Volume with the Balanced Pressure System	88
3.6	Use of Open-Tubular (Capillary) Columns	89
3.6.1	Properties of Open-Tubular Columns for Gas Samples	89

3.6.2	Headspace Sampling with Split or Splitless Introduction	90
3.6.3	Comparison of Split and Splitless Headspace Sampling	93
3.6.4	Band Broadening During Sample Introduction	96
3.6.5	Influence of Temperature on Band Broadening	99
3.6.5.1	Conclusions	101
3.6.6	The Combination of Different Columns and Detectors	101
3.7	Enrichment Techniques in HS-GC	105
3.7.1	Systems for Cryogenic Trapping	108
3.7.1.1	Trapping by Cryogenic Condensation	109
3.7.1.2	Trapping by Cryogenic Focusing	110
3.7.1.3	Influence of Temperature on Cryogenic Focusing	118
3.7.1.4	Comparison of the Various Techniques of Cryogenic Trapping	122
3.7.2	Influence of Water in Cryogenic HS-GC	124
3.7.2.1	Water Removal in Static HS-GC	127
3.7.2.2	Applications	129
3.7.3	Enrichment by Adsorption	134
3.7.3.1	Water Removal from an Adsorption Trap	134
3.8	Special Techniques with the Balanced Pressure Systems	139
3.8.1	Instrumentation for MHE	139
3.8.2	Backflushing	140
3.9	Reaction HS-GC	143
3.9.1	Derivatization in the Headspace Vial	145
3.9.1.1	Methylation	146
3.9.1.2	Esterification	146
3.9.1.3	Transesterification	148
3.9.1.4	Acetylation	149
3.9.1.5	Carbonyl Compounds	149
3.9.2	Subtraction HS-GC	149
3.9.3	Special Reactions	153
3.9.4	HS-GC Analysis of Volatile Derivatives from Inorganic Compounds	158
	References	160
<b>4</b>	<b>Sample Handling in HS-GC</b>	<b>165</b>
4.1	Equilibration	166
4.1.1	Gas Samples	167
4.1.2	Liquid Samples	168
4.1.2.1	General Properties	168
4.1.2.2	Reduction of the Equilibration Time for Liquid Samples	169
4.1.3	Solid Samples	171
4.2	Solution Approach	174

4.3	Sample Handling and Sample Introduction	177
4.3.1	Gas Samples	177
4.3.2	Liquid Samples	179
4.3.3	Solid Samples	180
4.4	Preparation of Standard Solutions	181
4.4.1	Preparation of a Standard Solution from a Liquid or Solid Substance	182
4.4.2	Preparation of a Standard Solution from a Gaseous Compound	184
4.5	Influence of the Matrix	186
4.5.1	Clean Matrix Is Available	187
4.5.2	Matrix Effect Can Be Eliminated	187
4.5.3	Artificial Matrix Can Be Prepared	189
4.6	Methods Aiming at Complete Evaporation of the Analyte	189
4.6.1	The Total Vaporization Technique (TVT)	190
4.6.2	The Full Evaporation Technique (FET)	191
4.6.3	Calculation of the Extraction Yield in FET	194
4.6.4	Comparison of Headspace Sensitivities	195
	References	195
<b>5</b>	<b>Headspace Methods for Quantitative Analysis</b>	<b>197</b>
5.1	Internal Normalization	199
5.2	Internal Standard Method	202
5.2.1	Blood Alcohol Determination	207
5.3	External Standard Method	207
5.4	Standard Addition Method	213
5.4.1	Single Addition	213
5.4.2	Handling of the Added Standard	214
5.4.3	Determination by Multiple Additions	218
5.5	Multiple Headspace Extraction (MHE)	221
5.5.1	Principles of MHE	221
5.5.2	Calibration in MHE	222
5.5.2.1	External Standard	222
5.5.2.2	Internal Standard	226
5.5.2.3	Standard Addition	226
5.5.3	The Use of Gaseous External Standards in MHE	227
5.5.3.1	Correction for Sample Volume	228
5.5.4	The Role of Quotient $Q$	229
5.5.4.1	Relationship between $Q$ and Pressures	229
5.5.4.2	Value of $Q$ in the Case of Total Vaporization	230
5.5.4.3	The Relative Position of the MHE Plots as a Function of $Q$	232
5.5.5	The Correlation Coefficient $r$	234
5.5.6	Evaluation of the Shape of the Regression Plot	234

5.5.7	Influence of $K/B$	236
5.6	Analysis of Solid Samples (Adsorption Systems)	237
5.6.1	Suspension Approach	238
5.6.2	Surface-Modification Techniques	244
5.6.3	Highly Adsorptive Solid Samples	250
5.7	Calibration Techniques with Headspace Samples of Varying Volumes	252
5.8	Analysis of Gas Samples	253
	References	255
<b>6</b>	<b>Method Development in HS-GC</b>	<b>257</b>
6.1	General Guidelines	258
6.2	Determination of the Residual Monomer Content of Polystyrene Pellets	259
6.2.1	First Approach: Use of Internal Standard with MHE	259
6.2.2	Second Approach: Single Determination with Internal Standard	262
6.2.3	Third Approach: Use of External Standard with MHE	263
6.2.4	Fourth Approach: Use of the Solution Approach	263
6.3	Determination of Residual Solvents in a Printed Plastic Film	263
6.3.1	First Approach: Use of External Standard with MHE	265
6.3.2	Second Approach: Use of Standard Addition with MHE	266
6.3.3	Third Approach: Use of Internal Standard	267
6.3.4	Fourth Approach: Use of Standard Addition	267
6.4	Determination of the Volatile Constituents of a Cathodic Electrolytic Plating Bath	268
6.4.1	First Approach: Use of External Standard with MHE	268
6.4.2	Second Approach: Dilution and Use of External Standard	269
<b>7</b>	<b>Nonequilibrium Static Headspace Analysis</b>	<b>271</b>
7.1	Accelerated Analysis	272
7.2	Heat-Sensitive Samples	274
	References	277
<b>8</b>	<b>Qualitative Analysis by HS-GC</b>	<b>279</b>
8.1	The Use of HS-GC in "Fingerprinting"	282
8.2	The Use of Headspace Sampling in Hyphenated Systems	282
8.3	The Use of HS-GC in Microbiology	286
	References	291
<b>9</b>	<b>Special Measurements</b>	<b>293</b>
9.1	Determination of Vapor Pressures	294
9.2	Determination of Activity Coefficients	299

9.3	Determination of Related Physicochemical Functions	302
9.4	Determination of Phase Distribution (Partition Coefficient)	303
9.4.1	The Vapor-Phase Calibration (VPC) Method	305
9.4.2	The Phase Ratio Variation (PRV) Method	308
9.4.2.1	Principles	309
9.4.2.2	Limitation of the PRV Method	311
9.4.3	MHE Methods for the Determination of the Partition Coefficient	312
9.4.3.1	VPC/MHE Method	313
9.4.3.2	PRV/MHE Method	316
9.5	Reaction Constant Measurements	316
9.6	Determination of Solute Solubility by MHE	319
9.7	Gas-Solid Systems	320
9.7.1	Determination of Adsorption Isotherms	320
9.7.2	Determination of the Rate of Release of a Volatile Analyte	321
9.8	Validation of Headspace Instrumentation: Investigation of Detector Linearity and Detection Limit	324
9.8.1	Definitions	325
9.8.2	Linear Range of the Detector	326
9.8.3	Precision of the Range	330
9.8.4	Minimum Detectability	330
	References	332
