

CLASSICAL ELECTRODYNAMICS

SECOND EDITION

Hans C. Ohanian

PHYSICS SERIES

Contents

Preface	xi
1 Vector Calculus	1
1·1 Scalars and Vectors	1
1·2 Rotations of Coordinates; Tensors*	6
1·3 Fields and Differential Operators	14
1·4 Cylindrical and Spherical Coordinates	20
1·5 Gauss' and Stokes' Theorems	25
1·6 The Continuity Equation; Conservation of Charge	34
References	37
Problems	38
2 Electrostatics	43
2·1 Coulomb's Law	43
2·2 The Electric Field; Gauss' Law	49
2·3 The Electrostatic Potential; Poisson's Equation	57
2·4 The Electric Dipole	62
2·5 The Mean-Value Theorem*	67
References	70
Problems	70
3 The Boundary-Value Problem	77
3·1 The Uniqueness Theorem	77
3·2 Laplace's Equation in Rectangular Coordinates	85
3·3 Laplace's Equation in Cylindrical Coordinates	90
3·4 Laplace's Equation in Spherical Coordinates	96
3·5 The Multipole Expansion	104
References	110
Problems	110

*Sections marked by an asterisk are optional. The material in these sections is not needed for later parts of the book.

4	<i>Dielectrics</i>	115
4·1	The Polarization	115
4·2	The Electric Displacement Field	119
4·3	The Boundary-Value Problem with Dielectrics	122
4·4	A Microscopic View of Dielectrics*	131
4·5	The Local Field*	134
	Problems	137
5	<i>Electric Energy</i>	143
5·1	The Energy in the Electric Field	143
5·2	The Energy in Dielectrics	150
5·3	Energy of a Charged Body in an External Field	155
5·4	Capacitors	156
	Problems	162
6	<i>The Theory of Special Relativity</i>	167
6·1	Spacetime and Relativity in Newtonian Physics	167
6·2	Einstein's Principle of Relativity; the Michelson-Morley Experiment	171
6·3	Other Experiments*	179
6·4	The Spacetime Interval	184
6·5	The Lorentz Transformation	189
6·6	Time Dilation	198
6·7	Length Contraction	208
	References	211
	Problems	213
7	<i>Vector Calculus in Spacetime</i>	223
7·1	Four-Vectors and Tensors	223
7·2	The Energy-Momentum Vector	230
7·3	Differential Operators in Spacetime	243
7·4	The Current Four-Vector	246
	References	248
	Problems	249
8	<i>Relativistic Electrodynamics</i>	255
8·1	The Four-Vector Potential	255
8·2	The Field Tensor and the Equation of Motion	260
8·3	Maxwell's Equations	268
8·4	The Energy-Momentum Tensor	272
	Problems	279

9	<i>Magnetostatics</i>	283
9·1	The Magnetic Field of a Point Charge	283
9·2	Steady Currents; Ohm's Law	285
9·3	The Static Magnetic Field; Ampère's Law and Biot-Savart's Law	292
9·4	The Magnetic Scalar Potential; the Magnetic Dipole	299
9·5	Motion of Particles in Magnetic Fields	304
9·6	Magnetic Forces on Currents	309
9·7	Magnetic Monopoles*	312
	References	320
	Problems	320
10	<i>Electromagnetic Induction</i>	329
10·1	Faraday's Law of Induction	329
10·2	Inductance	340
10·3	The LCR Circuit	346
10·4	Motion in a Slowly Varying Magnetic Field	349
10·5	The Displacement Current	353
	Problems	355
11	<i>Magnetic Dipoles and Magnetic Materials</i>	365
11·1	Magnetic Dipole in an External Field	365
11·2	The Magnetization	373
11·3	The H Field	377
11·4	The Magnetic Potential and the Boundary-Value Problem	381
11·5	Energy in the Magnetic Field	387
	Problems	391
12	<i>Electromagnetic Waves</i>	397
12·1	Plane Waves in Vacuum	397
12·2	The Wave Four-Vector; Doppler Shift and Aberration	404
12·3	Energy, Momentum, and Angular Momentum in a Plane Wave	407
12·4	Plane Waves in a Nonconducting Medium	413
12·5	Dispersion and the Oscillator Model	417
12·6	Refraction	425
12·7	Total Internal Reflection	433
12·8	Plane Waves in a Conducting Medium*	435
12·9	The Approach to Equilibrium in a Good Conductor*	441
	References	443
	Problems	443

13	<i>Radiation by a Point Charge</i>	453
13·1	The Retarded Potential	453
13·2	The Liénard-Wiechert Potential	458
13·3	The Radiation Fields	462
13·4	The Radiation Pattern	467
13·5	Radiation in a Dielectric Medium; the Cherenkov Effect*	475
	References	478
	Problems	478
14	<i>Radiation by a System of Charges</i>	483
14·1	The Radiation Fields	483
14·2	The Half-Wave Antenna	486
14·3	The Multipole Expansion; Dipole Radiation	490
14·4	Magnetic Dipole Radiation*	496
14·5	Electric Quadrupole Radiation*	498
	Problems	504
15	<i>Resonant Cavities and Waveguides</i>	509
15·1	Eigenvalue Problem for a Cavity	509
15·2	Cylindrical Cavities	513
15·3	Rectangular Cavities	515
15·4	Energy Dissipation in a Cavity*	519
15·5	Waveguides	521
15·6	Dielectric Waveguides*	527
15·7	The Laser as a Cavity*	532
	Problems	537
16	<i>Scattering and Diffraction</i>	541
16·1	Thomson Scattering	541
16·2	The Forward Scattering Amplitude; the Optical Theorem*	547
16·3	The Kirchhoff Integral	549
16·4	Fraunhofer Diffraction	557
16·5	Fresnel Diffraction*	565
	Problems	574
	<i>Appendix 1: Fundamental Constants</i>	579
	<i>Appendix 2: Correspondence Between CGS and SI Units</i>	583
	<i>Bibliography</i>	587
	<i>Answers to Even-Numbered Problems</i>	597
	<i>Index</i>	609
