INTRODUCTION TO DATABASE MANAGEMENT

Mark L. Gillenson | Paulraj Ponniah | Alex Kriegel |
Boris M. Trukhnov | Allen G. Taylor | Gavin Powell | *with Frank Miller*

CONTENTS

1 Introduction to Data and Data Management

1.1 Identifying Business Data.....2

1.2 Identifying Human Data Sources.....4

1.3 Installing SQL Server 2005 Evaluation Edition.....5

1.4 Learning About SQL Server Management Studio.....12

1.5 Identifying Key Management Areas.....19

2 Introducing Databases and Database Management Systems

2.1 Comparing Database Models.....21

2.2 Identifying DBMS Architecture and Components.....23

2.3 Reviewing Server Hardware Resources.....24

2.4 Investigating SQL Server Databases.....32

2.5 Identifying Application Requirements.....35

3 Data Modeling

3.1 Understanding Data Modeling Concepts.....39

3.2 Recognizing Entities, Attributes, and Identifiers.....40

3.3 Recognizing Relationships and Business Rules.....42

3.4 Reading an ERD.....45

3.5 Creating an ERD.....47

3.6 Viewing Basic Database Objects.....50

4 Designing a Database

4.1 Understanding Key Concepts.....59

4.2 Converting Relationships.....60

4.3 Reviewing a Normalized Database.....65

4.4 Recognizing Normalization Errors.....69

4.5 Normalizing Data.....73

5 Implementing a Database

5.1 Understanding Terms and Concepts.....78

5.2 Identifying Solution Requirements.....79

5.3 Creating a Database.....84

5.4 Creating Tables, Part 1.....88

5.5 Setting Table Constraints.....91

5.6 Creating Tables, Part 2.....96

6 Understanding the SQL Language

6.1 Understanding Terms and Concepts.....102

6.2 Identifying Help Resources.....104

6.3 Comparing Command Environments.....111

6.4 Using the SELECT Command.....116

6.5 Using DDL Commands.....121

6.6 Using DML Commands.....126

7 Data Access and Manipulation

7.1 Understanding Data Access.....132

7.2 Retrieving Data.....133

7.3 Using Advanced Data Retrieval.....138

7.4 Using Batches and Scripts.....141

7.5 Recognizing and Correcting Syntax Errors.....144

8 Improving Data Access

8.1 Understanding Database Monitoring and Optimization.....149

8.2 Investigating Resources and Configuration Settings.....151

8.3 Monitoring Performance.....163

8.4 Recognizing Bottlenecks.....172

8.5 Using Indexes and Views.....175

8.6 Using Procedures and Functions.....179

9 Database Administration

9.1 Understanding Administration.....184

9.2 Understanding Roles and Responsibilities.....186

9.3 Matching Life Cycle Requirements.....188

9.4 Resolving Administration Issues.....190

9.5 Managing "As-Needed" and Periodic Tasks.....196

10 Transactions and Locking

10.1 Understanding Transactions and Locking.....210

10.2 Understanding Transaction Types.....212

10.3 Understanding Transaction Isolation and Locking.....219

10.4 Using Transactions.....226

10.5 Monitoring Transactions and Clearing Blocked Transactions....231

11 Data Access and Security

11.1 Understanding Data Access and Security.....236

11.2 Designing for Access and Security.....238

11.3 Understanding Your Security Environment.....242

11.4 Managing Security Principals.....249

11.5 Managing Permissions.....255

11.6 Managing Backups.....263

12 Supporting Database Applications

12.1 Understanding Data Configurations.....267

12.2 Designing Data Environments.....269

12.3 Working in a Distributed Environment.....277

12.4 Using Distributed Queries.....284

12.5 Using Replication.....291

12.6 Understanding Data Issues.....299
