## Utilisation and conservation of farm animal genetic resources

edited by: Kor Oldenbroek

## **Table of contents**

Chapter 1. Introduction  Kor Oldenbroek  Summary  1. Challenges for food production in livestock systems  2. Changes in livestock systems  3. Consequences for the use of species and breeds  4. The importance of farm animal genetic diversity and objectives for conservation  5. History of initiatives to stop genetic erosion at global and regional levels  6. Opportunities and threats for farm animal genetic resources  7. Conservation methods to be applied  8. Stakeholders for in vivo and in vitro conservation programs  References  Chapter 2. Strategies for moving from conservation to utilisation  Gustavo Gandini and Kor Oldenbroek  Summary  1. Objectives in conservation and utilisation of farm animal genetic resources  25

4. The importance of farm animal genetic diversity and objectives for conservation  5. History of initiatives to stop genetic erosion at global and regional levels  6. Opportunities and threats for farm animal genetic resources  7. Conservation methods to be applied  8. Stakeholders for in vivo and in vitro conservation programs  References  Chapter 2. Strategies for moving from conservation to utilisation  Gustavo Gandini and Kor Oldenbröek  Summary  1. Objectives in conservation and utilisation of farm animal genetic resources
conservation 5. History of initiatives to stop genetic erosion at global and regional levels 6. Opportunities and threats for farm animal genetic resources 7. Conservation methods to be applied 8. Stakeholders for in vivo and in vitro conservation programs References  Chapter 2. Strategies for moving from conservation to utilisation  Gustavo Gandini and Kor Oldenbroek  Summary 1. Objectives in conservation and utilisation of farm animal genetic resources 220 221 222 223 224 225 226 227 227 228 229 229 229 229 220 220 220 220 220 220
6. Opportunities and threats for farm animal genetic resources 7. Conservation methods to be applied 8. Stakeholders for in vivo and in vitro conservation programs References  Chapter 2. Strategies for moving from conservation to utilisation  Gustavo Gandini and Kor Oldenbröek Summary 1. Objectives in conservation and utilisation of farm animal genetic resources  22  23  24  25  26  27
6. Opportunities and threats for farm animal genetic resources 7. Conservation methods to be applied 8. Stakeholders for in vivo and in vitro conservation programs References  Chapter 2. Strategies for moving from conservation to utilisation  Gustavo Gandini and Kor Oldenbröek Summary 1. Objectives in conservation and utilisation of farm animal genetic resources  22  23  24  25  26  27
7. Conservation methods to be applied 8. Stakeholders for in vivo and in vitro conservation programs References  27  Chapter 2. Strategies for moving from conservation to utilisation  Gustavo Gandini and Kor Oldenbroek  Summary 1. Objectives in conservation and utilisation of farm animal genetic resources 29
References 27  Chapter 2. Strategies for moving from conservation to utilisation 29  Gustavo Gandini and Kor Oldenbroek  Summary 29  1. Objectives in conservation and utilisation of farm animal genetic resources 29
Chapter 2. Strategies for moving from conservation to utilisation  Gustavo Gandini and Kor Oldenbröek  Summary  1. Objectives in conservation and utilisation of farm animal genetic resources  29
Gustavo Gandini and Kor Oldenbroek Summary 1. Objectives in conservation and utilisation of farm animal genetic resources 29
1. Objectives in conservation and utilisation of farm animal genetic resources 29
1. Objectives in conservation and utilisation of farm animal genetic resources 29
2. Techniques 31
3. Options for utilisation of self-sustaining local breeds 33
4. Cryoconservation 42
5. Costs 49
6. Making the decision 50
References 52
Chapter 3. What is genetic diversity?
John Woolliams and Miguel Toro
Summary 55
1. Introduction 55
2. Sub-populations and evolutionary forces 57
3. The use of pedigree for measuring diversity 60
4. The impact of DNA information 61
5. Genome-wide patterns of diversity 66
6. Measuring changes in diversity 68
7. Relating diversity measures to F and $\Delta F$ 71

8. Conclusion References	73 73
Chapter 4. Genomics reveals domestication history and facilitates breed	
development	75
Miguel Toro and Asko Mäki-Tanila	
Summary	75
1. Animal domestication	76
2. How have the events in breed history modified the genetic variation?	82
3. Utilisation of breed differences	88
4. Conclusions	97
References	99
Chapter 5. Measuring genetic diversity in farm animals	103
Herwin Eding and Jörn Bennewitz	
Summary	103
1. Introduction	103
2. Genetic distances, F-statistics and kinships	105
3. Weitzman and Core set diversities	119
4. Genetic distances, kinships and conservation decisions	124
5. Concluding remarks	127
References	128
Chapter 6. Selection of breeds for conservation	131
Jörn Bennewitz, Herwin Eding, John Ruane and Henner Simianer	_
Summary	131
1. Introduction	131
2. What are the objectives of a conservation effort?	132
3. Which species are relevant?	134
4. Is the risk-strategy efficient for the selection of breeds?	134
5. Is the maximum-diversity-strategy efficient for the selection of breeds?	136
6. Is the maximum-utility-strategy efficient for the selection of breeds?	142
7. What are the practical aspects?	144
References	145
Chapter 7. Genetic contributions and inbreeding  John Woolliams	147
Summary	147
1. Inbreeding and inbreeding rate	147
2. Genetic contributions	149

I	ndex	229
(	Glossary	215
	References	212
	8. Sustainability issues for the different stakeholders	211
	7. Future policies for animal genetic resources	210
	6. Sustainable breeding schemes	209
	5. Monitoring role for the national managers	208
	4. Indicators for sustainable management	204
	3. Economic considerations	202
	2. An example of a national action plan for utilisation and management	199
	1. Existing global regulations	196
	Summary	195
	Chapter 9. Practical implications of utilisation and management Crling Fimland and Kor Oldenbroek	195
	Kelejences	191
	4. Integrating live and cryoconservation References	186
	3. Cryo-conservation schemes	185
	2. Live conservation schemes	169
	1. What issues are important?	168
	Summary	167
1	Theo Meuwissen	
	Chapter 8. Operation of conservation schemes	167
	References	164
	6. Guidelines for best practice	162
	5. Predicting $\Delta F$	158
	4. Selection	155
