Acknowledgements	vii
Preface.....	ix
Contents	xiii
Figures.....	xvii
Tables.....	xxv
1. Introduction	1
1.1 Rainfall-Runoff Modelling in Context	1
1.2 Problem Analysis	4
1.3 Conclusions and Resulting Research Objectives	7
1.4 Organization of Monograph	7
2. Rainfall-Runoff Modelling – A Review.....	9
2.1 Introduction.....	9
2.2 The Principle of Parsimony in Hydrological Modelling	9
2.3 The Rainfall-Runoff Process.....	11
2.4 Structural Representation in Parsimonious Models	15
2.4.1 Soil moisture accounting.....	19
2.4.2 Routing.....	23
2.5 Local Modelling Procedures	25
2.5.1 Model structure selection.....	26
2.5.2 Sensitivity analysis	26
2.5.3 Calibration	28
2.5.3.1 Objective function	29
2.5.3.2 Calibration data.....	33
2.5.3.3 Adjustment strategy	34
2.5.3.4 Termination criteria	39
2.5.4 Validation	40
2.5.5 Prediction – including uncertainty	41
2.6 Regional Modelling Procedures	44
2.6.1 Catchment and characteristics selection	46
2.6.2 Local model structure selection and calibration	49
2.6.3 Regional model structure selection and calibration	49
2.6.4 Flow prediction at an ungauged site	50
2.6.5 Variations on conventional regional procedures.....	51
2.6.5.1 Integrated procedure	51

2.6.5.2	Sequential procedure	52
2.6.5.3	Indirect procedure.....	52
2.7	Summary and Conclusions.....	52
3.	A Toolkit for Rainfall-Runoff Modelling	55
3.1	Introduction.....	55
3.2	Rainfall-Runoff Modelling Toolbox	57
3.2.1	General.....	57
3.2.2	System architecture	58
3.2.3	Soil moisture accounting modules	60
3.2.4	Routing modules	72
3.2.5	Optimization modules	75
3.2.6	Objective functions	78
3.2.7	Visual analysis modules.....	84
3.2.8	Summary	85
3.3	Monte Carlo Analysis Toolbox.....	85
3.3.1	General.....	85
3.3.2	System architecture	86
3.3.3	Parameter sensitivity and identifiability.....	86
3.3.4	Model structure suitability.....	90
3.3.5	Prediction uncertainty	91
3.3.6	Summary	92
3.4	Application Example – Complexity Versus Identifiability	93
3.5	Summary and Conclusions.....	96
4.	Modelling Gauged Catchments – Local Procedures	99
4.1	Introduction.....	99
4.2	Identification of Conceptual Rainfall-Runoff Models.....	103
4.2.1	Identification of model structures.....	105
4.2.2	Identification of parameters.....	108
4.3	Evaluation of Conceptual Rainfall-Runoff Models.....	112
4.3.1	Evaluation of competing model structures – Multi-objective performance and identifiability analysis.....	113
4.3.1.1	Measures of performance and identifiability	113
4.3.1.2	Multi-objective framework.....	116
4.3.2	Evaluation of individual model structures – Dynamic identifiability analysis	120
4.3.2.1	Failure, inference and improved hypotheses	120
4.3.2.2	Dynamic identifiability analysis	121
4.3.3	A combined framework of corroboration and rejection	125
4.4	Application Examples	127
4.4.1	Example 1 – Multi-objective performance and identifiability analysis.....	127

4.4.1.1	Data	128
4.4.1.2	Model structure and calibration tools	128
4.4.1.3	Methodology.....	130
4.4.1.4	Results and discussion	132
4.4.2	Example 2 – Dynamic identifiability analysis.....	140
4.4.2.1	Data	140
4.4.2.2	Model structure.....	141
4.4.2.3	Results and discussion	143
4.4.3	Example 3 – Application of the combined framework.....	155
4.4.3.1	Data	155
4.4.3.2	Model structures	155
4.4.3.3	Methodology.....	156
4.4.3.4	Results and discussion	159
4.5	Summary and Conclusions.....	166
5.	Modelling Ungauged Catchments – Regional Procedures.....	169
5.1	Introduction.....	169
5.2	The Idea of Regionalization	173
5.3	Problems and Possible Ways Forward	175
5.3.1	Catchments, their characteristics and clusters	175
5.3.2	Local model.....	179
5.3.3	Regional model	183
5.3.3.1	Univariate regression	183
5.3.3.2	‘Correlated’ regression	184
5.3.3.3	Generalized regression – radial basis neural networks ..	185
5.3.3.4	Symbolic regression – genetic programming	186
5.3.3.5	Univariate weighted regression	187
5.3.3.6	Conclusions	188
5.3.4	Regional procedure	189
5.3.4.1	Combined procedure.....	189
5.3.4.2	Sequential procedure	191
5.3.4.3	Updating procedure	191
5.3.4.4	Conclusions	192
5.3.5	Flow prediction – including uncertainty	192
5.3.5.1	Monte Carlo.....	193
5.3.5.2	Fuzzy regression.....	194
5.3.5.3	Conclusions	195
5.3.6	Uniqueness of place	195
5.4	A Framework for Regionalization.....	197
5.5	Application Example.....	199
5.5.1	Data	200
5.5.2	Catchment characteristics.....	202
5.5.3	Local model.....	208

5.5.4	Regional model	214
5.5.4.1	Variable properties and correlation analysis	214
5.5.4.2	Effect of using FH and FL	222
5.5.4.3	Regional structures and performance criteria	223
5.5.4.4	Multiple univariate regression – benchmark	224
5.5.4.5	Multiple weighted univariate regression – considering identifiability	225
5.5.4.6	Generalized regression	230
5.5.5	Alternative regional procedure	231
5.5.5.1	Sequential procedure	231
5.5.6	Test catchment performance including flow prediction	234
5.5.6.1	Comparison with test catchment	234
5.5.6.2	Flow prediction	236
5.6	Summary and Conclusions	237
6.	Discussion, Conclusions and Recommendations for Future Research	241
6.1	Discussions and Conclusions	241
6.1.1	General	241
6.1.2	Discussion and conclusions with respect to the toolkit	243
6.1.3	Discussion and conclusions with respect to local modelling	243
6.1.4	Discussion and conclusions with respect to regional modelling	246
6.2	Recommendations for Future Research	248
6.2.1	Recommendations with respect to the toolkit	248
6.2.2	Recommendations with respect to local modelling	249
6.2.3	Recommendations with respect to regional modelling	250
6.3	Resume	251
	Appendix A - Some Investigations into Regional Modelling	253
	Appendix B - The Rainfall-Runoff Modelling Toolbox	263
	Appendix C - The Monte Carlo Analysis Toolbox	265
	Notation	267
	Bibliography	273
	Index	301
	About the Authors	305
