Preface	xv
About the Author	xvii

1 Introduction	1
1.1 A Brief Networking History	3
1.2 Network Standards and Protocols	7
1.3 Protocol Reference Models	8
1.3.1 The OSI Model	8
1.3.1.1 Physical Layer	9
1.3.1.2 Data Link Layer	10
1.3.1.3 Network Layer	10
1.3.1.4 Transport Layer	11
1.3.1.5 Session Layer	12
1.3.1.6 Presentation Layer	12
1.3.1.7 Application Layer	13
1.3.2 Why Are Protocol Reference Models Layered?	13
1.3.3 Drawbacks of the OSI Model	14
1.3.4 Ordering Constraints	16
1.3.5 Other Factors	17
1.3.6 Heterogeneity and OSI	18
1.4 The Emergence of Middleware Architectures	20
1.5 The TCP/IP Reference Model	22
1.5.1 The Network Layer	22
1.5.2 The Internet Layer	23
1.5.3 The Transport Layer	25
1.5.4 The Application Layer	25
1.6 Comparison of OSI and TCP/IP Models	25
1.6.1 Comparison between the TCP/IP and OSI Transport Service Functions	26
1.6.1.1 Connection Establishment	26
1.6.1.2 Called Address	26

1.6.1.3	Expedited Data Option	26
1.6.1.4	TS User Data	27
1.6.1.5	Data Transfer	27
1.6.1.6	Connection Release Phase	27
1.7	Standards Organizations	28
1.7.1	International Organization for Standardization (ISO)	28
1.7.2	International Telecommunications Union (ITU)	29
1.7.3	American National Standards Institute (ANSI)	29
1.7.4	Institute of Electrical and Electronics Engineers (IEEE)	30
1.7.5	Electronic Industries Association (EIA)	30
1.7.6	Internet Engineering Task Force (IETF)	31
1.8	Summary	31
	Exercises	32
	References	32

2 Architecture of Active and Programmable Networks.....35

2.1	Introduction	35
2.2	Quality of Service Technologies for IP Network	36
2.3	Quality of Service Parameters	40
2.3.1	End-to-End Latency	40
2.3.2	Delay Jitter (Delay Variation)	40
2.3.3	Packet Loss	42
2.4	Motivation for Active and Programmable Networks	42
2.5	The IEEE 1520 Standards Initiative for Programmable Networks	45
2.5.1	Programming Interfaces for ATM Networks	47
2.5.2	Programming Interfaces for IP Router Networks	48
2.6	Classification of Active and Programmable Networks	48
2.6.1	Discrete Mechanism Approach	48
2.6.2	Integrated Mechanism or Capsule Approach	49
2.6.2.1	Foundation Components	50
2.6.2.2	Active Storage	50
2.6.2.3	Program Extensibility	50
2.6.2.4	Interoperability in Capsule-Based Networks	51
2.6.2.5	Enabling Active Technologies	51
2.6.2.6	Source Code	51
2.6.2.7	Intermediate Code	52
2.6.2.8	Platform-Dependent (Binary) Code	52
2.6.2.9	Architectural Considerations	52
2.6.3	Programmable Switch Approach	53
2.7	Components and Architecture of Active Networks	53
2.7.1	Major Components	53
2.7.2	Packet Processing in Active Networks	54
2.8	Summary	55
	Exercises	56
	References	56

3	Enabling Technologies for Network Programmability.....	59
3.1	Introduction	59
3.2	Enabling Technologies for Network Programmability	59
3.2.1	Agents	59
3.2.1.1	Agent Technologies	60
3.2.1.2	Mobile Agents.....	62
3.2.2	Middleware Technology	70
3.2.2.1	Object Management Architecture	72
3.2.2.2	The Common Object Request Broker Architecture	73
3.2.3	Operating System Support for Programmable Networks	80
3.2.3.1	Janos: A Java-Oriented OS for Active Network Nodes.....	81
3.2.3.2	Bowman: Operating System for Active Nodes	83
3.2.4	Dynamically Reconfigurable Hardware	85
3.2.4.1	Applications of FPGAs in Active Networks	85
3.2.4.2	Field-Programmable Port Extender (FPX)	86
3.2.4.3	P4: Programmable Protocol Processing Pipeline	88
3.2.4.4	PLATO Reconfigurable Platform for ATM Networks	89
3.3	Summary	91
	Exercises	92
	References.....	93
4	Active and Programmable Network Paradigms and Protoypes	97
4.1	Introduction	97
4.2	Types of Active and Programmable Networks.....	98
4.2.1	The Binding Model.....	99
4.2.1.1	The Binding Architecture.....	99
4.2.1.2	The Extended Reference Model.....	102
4.2.1.3	The Service Creation Process	103
4.2.2	ANTS: Active Network Transfer System.....	103
4.2.2.1	Architecture of the ANTS.....	104
4.2.2.2	Programming.....	108
4.2.3	Switchware.....	109
4.2.4	Smart Packets	110
4.2.5	Netscript.....	112
4.2.6	CANEs: An Execution Environment for Composable Services	114
4.2.7	Supranets	115
4.2.8	Switchlet-Based Tempest	116
4.2.9	Routelet-Based Spawning Networks.....	118
4.2.10	Hierarchical Fair Service Curve Scheduling in Darwin.....	120
4.2.11	Virtual Active Network (VAN).....	122
4.2.12	Active Network Node (ANN).....	123

4.2.13	The Phoenix Framework	125
4.2.13.1	Architecture	125
4.2.13.2	Execution Process at an Active Device	127
4.2.14	Composing Protocol Frameworks for Active Wireless Networks.....	128
4.2.14.1	Protocol Composition in Magician.....	128
4.2.15	A Programmable Framework for QoS in Open Adaptive Environments.....	131
4.3	Summary	136
	Exercises	140
	References.....	141
5	Packet Scheduling for Active and Programmable Networks	145
5.1	Introduction	145
5.2	Packet-Scheduling Mechanisms.....	146
5.2.1	Weighted-Fair Queuing (WFQ).....	147
5.2.2	Variants of Weighted-Fair Queuing (WFQ).....	149
5.2.3	Non-Work-Conserving Algorithms	153
5.2.3.1	Earliest-Due-Date Schemes	153
5.2.3.2	Stop-and-Go	154
5.2.3.3	Rate-Controlled Static Priority (RCSP).....	155
5.2.4	Analysis of End-to-End Delay and Delay Jitter (Delay Variation) Characteristics.....	156
5.2.5	Complexity Analysis of Work-Conserving Algorithms	157
5.2.6	Fairness Analysis of Work-Conserving Algorithms.....	162
5.3	Active Scheduling for Programmable Routers	162
5.3.1	Motivation for Active Scheduling.....	164
5.3.2	Mathematical Model and Algorithm of Active Scheduling..	166
5.4	Summary	170
	Exercises	171
	References.....	172
6	Active Network Management	175
6.1	Introduction	175
6.2	Active Network Management Architectures.....	177
6.2.1	Application-Layer Active Networking (ALAN)	178
6.2.1.1	Management Agent Services.....	179
6.2.1.2	Structures of Event Service Element and Notification Service Element.....	179
6.2.1.3	The Autonomous Controller.....	182
6.2.2	Active Networks Management Framework	183
6.2.2.1	Active MIB and Active Local Agent.....	185
6.2.2.2	Application and Service Implementation	186
6.2.2.3	Network Events Mining	186

6.2.3	FAIN: Policy-Based Network Management (PBNM) Architecture	187
6.2.3.1	Policy Editor.....	188
6.2.3.2	Active Network Service Provider (ANSP) Proxy....	189
6.2.3.3	Inter-PDP Conflict Check.....	190
6.2.3.4	PDP Manager	190
6.2.3.5	Policy Enforcement Points (PEPs).....	191
6.2.4	Active Distributed Management (ADM) for IP Networks....	191
6.2.4.1	Architecture of ADM	191
6.2.5	Managing Active Networks Based on Policies (MANBoP)..	194
6.2.5.1	Management System Setup.....	194
6.2.5.2	The Management Module.....	195
6.3	Summary	196
	Exercises	197
	References.....	197

7 Active and Programmable Routing.....199

7.1	Introduction	199
7.1.1	Extended Label Switching	201
7.2	Active Multicasting Mechanisms.....	202
7.2.1	Multicast Routing.....	202
7.2.2	Active Reliable Multicast (ARM).....	203
7.2.2.1	Data Caching for Local Retransmission.....	204
7.2.2.2	NACK Fusion	204
7.2.2.3	Partial Multicasting for Scaled Retransmission.....	204
7.2.3	Gathercast with Active Networks	205
7.2.3.1	Independent Aggregators and Gatherers.....	206
7.2.3.2	Active Gathercast Model.....	207
7.2.4	Hierarchical Source-Based Multicast Sessions.....	208
7.2.4.1	Scalability Issues	209
7.3	Active and Programmable Router Architectures.....	210
7.3.1	Flexible Intra-AS Routing Environment (FIRE).....	210
7.3.1.1	Architecture and Functions.....	211
7.3.1.2	Configuration and Management	214
7.3.1.3	Configuration Messages and Files.....	214
7.3.2	Darwin-Based Programmable Router Architecture.....	214
7.3.3	Programmable Router Operating System	217
7.3.3.1	Operational Architecture of CROSS	217
7.3.3.2	Packet Classification.....	218
7.3.4	Active Routing for Ad Hoc Networks	219
7.3.4.1	The Simple Active Packet Format (SAPF).....	219
7.3.4.2	Neighbor Discovery.....	221
7.3.5	Component-Based Active Network Architecture	221
7.3.5.1	Service Composition.....	222
7.3.5.2	Processing Environments	223
7.3.5.3	Active NodeOS	223

7.4	Summary	224
	References.....	225
8	Active Wireless and Mobile Networks.....	227
8.1	Introduction	227
8.2	A Brief History of Wireless Networks	229
8.3	Current Trends of Research in Mobile and Wireless Networks.....	230
8.4	Handoff in Wireless Networks.....	232
	8.4.1 Handoff in Cellular Networks.....	232
	8.4.2 Handoff in Wireless Local Area Networks.....	233
8.5	Active Base Stations and Nodes for Wireless Networks.....	233
	8.5.1 Architecture.....	236
	8.5.2 Security.....	238
	8.5.3 Resource Management.....	239
	8.5.4 Implementation	239
8.6	Programmable Middleware Support for Adaptive Mobile Networks	240
	8.6.1 Protocol Stack of Mobiware.....	240
	8.6.2 Summary of Programmable Objects.....	241
	8.6.2.1 QoS Adaptation Proxy (QAP) Objects.....	242
	8.6.2.2 Routing Anchor Proxy (RAP) Objects.....	242
	8.6.3 QoS-Controlled Handoff.....	242
	8.6.4 Flow Bundling.....	243
	8.6.5 Mobile Soft State	244
8.7	Programmable Handoffs in Mobile Networks	244
	8.7.1 Background	244
	8.7.2 Handoff Control Model	246
	8.7.3 Mobility Management Model.....	247
	8.7.4 Software Radio Model	248
	8.7.5 Handoff Adapters.....	248
8.8	An Active Approach to Multicasting in Mobile Networks (AMTree).....	249
	8.8.1 Background	249
	8.8.2 The Problems of Mobile IP.....	250
	8.8.2.1 The Tunnel Convergence Problem.....	250
	8.8.2.2 Remote Subscription.....	250
	8.8.2.3 Receiver Migration.....	250
	8.8.3 AMTree.....	251
	8.8.3.1 Construction of the Multicast Tree.....	251
	8.8.3.2 Handoff	253
8.9	Advantages of AMTree.....	254
8.10	An Adaptive Management Architecture for Ad Hoc Networks.....	255
	8.10.1 Background	255
	8.10.2 Node Classification.....	256
	8.10.3 Active Probes.....	257
	8.10.3.1 Monitoring Probes	258
	8.10.3.2 Task-Specific Probes.....	258

8.10.4	Nomadic Management Module	259
8.10.4.1	Autonomy and Adaptiveness.....	259
8.10.4.2	Lightweight, Modular, and Extensible Design.....	259
8.11	Programmable Sensor Networks.....	260
8.11.1	Architectural Details.....	261
8.12	Summary	262
	Exercises	263
	References.....	263

9 Security in Active and Programmable Networks267

9.1	Introduction	267
9.1.1	General Security Issues of Networks	267
9.1.2	Types of Security Risks in Networks	269
9.2	Types of Threats to Wireless Networks.....	271
9.2.1	Accidental Association	271
9.2.2	Malicious Association.....	271
9.2.3	Ad Hoc Networks	271
9.2.4	Man-in-the-Middle Attacks.....	271
9.2.5	Denial of Service.....	272
9.2.6	Network Injection	272
9.2.7	Identity Theft (MAC Spoofing)	272
9.3	Security and Safety Issues of Programmable/Active Networks.....	272
9.3.1	Difference between Security and Safety	272
9.3.2	Main Threats to Active/Programmable Networks.....	272
9.3.2.1	Damage	273
9.3.2.2	Denial of Service (DoS).....	273
9.3.2.3	Theft	273
9.3.2.4	Compound Attack.....	273
9.3.3	Protection Techniques	273
9.3.3.1	Authentication of Active Packets	273
9.3.3.2	Monitoring and Control	274
9.3.3.3	Limitation Techniques	274
9.3.3.4	Proof-Carrying Code (PCC)	274
9.3.4	Protecting Packets	274
9.3.4.1	Encryption Technique	274
9.3.4.2	Fault Tolerance Techniques.....	274
9.4	Active Network Security Research Projects.....	275
9.4.1	Secure Active Network Environment (SANE).....	276
9.4.1.1	Background.....	276
9.4.1.2	Architecture of SANE	277
9.4.1.3	Public Key Infrastructure	278
9.4.1.4	AEGIS Layered Boot and Recovery Process	278
9.4.1.5	Dynamic Resource Naming	280
9.4.2	Safetynet.....	280
9.4.3	Secure Active Network Transport System (SANTS)	282
9.4.3.1	Authentication Process	282
9.4.3.2	Authorization Process.....	284

9.4.4	Secure QoS Handling (SQoSH)	284
9.4.5	PLAN	285
9.4.6	Active Edge Tagging (ACT): An Intruder Identification and Isolation Scheme in Active Networks.....	286
9.4.6.1	Background.....	286
9.4.6.2	Details of ACT.....	287
9.4.7	Active Security Support for Active Networks	290
9.4.7.1	The NodeOS Security API	291
9.4.7.2	Active Access Control	292
9.4.8	The Dynamic Access Control Mechanism.....	296
9.4.8.1	The Security Daemon	297
9.4.8.2	The Policy Handler	297
9.4.8.3	An Access Control Kernel Module (ACKM).....	298
9.5	Summary	298
	Exercises	300
	References.....	300
10	Applications of Active and Programmable Networks	303
10.1	Introduction	303
10.2	Active Electronic Mail	304
10.2.1	Active E-Mail Infrastructure	304
10.2.2	User Context Awareness.....	304
10.2.3	Distributed Antispam	305
10.2.4	Mail Storage	306
10.2.5	Mail Notifications	306
10.2.6	Mobility	306
10.3	Distribution of Video over the Internet Using Programmable Networks.....	307
10.3.1	Adaptation Policy.....	308
10.4	The Active Traffic and Congestion Control Mechanisms.....	310
10.4.1	Traffic Monitoring.....	311
10.4.2	Traffic Adaptation.....	311
10.5	Summary	312
	Exercises	313
	References.....	313
	Index.....	315
