

MEDICAL FIFTH EDITION **MICROBIOLOGY**

PATRICK R. MURRAY

KEN S. ROSENTHAL

MICHAEL A. PFALLER

Contents

1. Introduction to Medical Microbiology	1	Section IV: Bacteriology	191
Section I: Basic Principles of Medical Microbiology	5	19. Mechanisms of Bacterial Pathogenesis	193
2. Bacterial Classification	7	20. Antibacterial Agents	203
3. Bacterial Morphology and Cell Wall Structure and Synthesis	11	21. Laboratory Diagnosis of Bacterial Diseases	213
4. Bacterial Metabolism and Growth	25	22. <i>Staphylococcus</i> and Related Organisms	221
5. Bacterial Genetics	35	23. <i>Streptococcus</i>	237
6. Viral Classification, Structure, and Replication	47	24. <i>Enterococcus</i> and Other Gram-Positive Cocci	259
7. Fungal Classification, Structure, and Replication	67	25. <i>Bacillus</i>	265
8. Parasitic Classification, Structure, and Replication	75	26. <i>Listeria</i> and <i>Erysipelothrix</i>	273
9. Commensal and Pathogenic Microbial Flora in Humans	83	27. <i>Corynebacterium</i> and Other Gram-Positive Rods	279
10. Sterilization, Disinfection, and Antisepsis	89	28. <i>Nocardia</i> and Related Bacteria	287
Section II: Basic Concepts of the Immune Response	95	29. <i>Mycobacterium</i>	297
11. Elements of Host Protective Responses	97	30. <i>Neisseria</i> and Related Genera	311
12. The Humoral Immune Response	109	31. Enterobacteriaceae	323
13. Cellular Immune Responses	121	32. <i>Vibrio</i> and <i>Aeromonas</i>	339
14. Immune Responses to Infectious Agents	135	33. <i>Campylobacter</i> and <i>Helicobacter</i>	347
15. Antimicrobial Vaccines	159	34. <i>Pseudomonas</i> and Related Organisms	357
Section III: General Principles of Laboratory Diagnosis	169	35. <i>Haemophilus</i> and Related Bacteria	367
16. Microscopic Principles and Applications	171	36. <i>Bordetella</i>	377
17. Molecular Diagnosis	177	37. <i>Brucella</i> and <i>Francisella</i>	383
18. Serologic Diagnosis	183	38. <i>Legionella</i>	391
		39. Miscellaneous Gram-Negative Rods	397
		40. Anaerobic, Spore-Forming, Gram-Positive Rods	401
		41. Anaerobic, Non-Spore-Forming, Gram-Positive Bacteria	415
		42. Anaerobic Gram-Negative Bacteria	421
		43. <i>Treponema</i> , <i>Borrelia</i> , and <i>Leptospira</i>	427
		44. <i>Mycoplasma</i> and <i>Ureaplasma</i>	443
		45. <i>Rickettsia</i> and <i>Orientia</i>	449
		46. <i>Ehrlichia</i> , <i>Anaplasma</i> , and <i>Coxiella</i>	457
		47. Chlamydiaceae	463
		48. Role of Bacteria in Disease	473

Section V:**Virology****489**

49. Mechanisms of Viral Pathogenesis	491
50. Antiviral Agents	503
51. Laboratory Diagnosis of Viral Diseases	513
52. Papillomaviruses and Polyomaviruses	523
53. Adenoviruses	533
54. Human Herpesviruses	541
55. Poxviruses	565
56. Parvoviruses	573
57. Picornaviruses	579
58. Coronaviruses and Noraviruses	591
59. Paramyxoviruses	597
60. Orthomyxoviruses	609
61. Rhabdoviruses, Filoviruses, and Bornaviruses	619
62. Reoviruses	627
63. Togaviruses and Flaviviruses	637
64. Bunyaviridae and Arenaviridae	651
65. Retroviruses	657
66. Hepatitis Viruses	675
67. Unconventional Slow Viruses: Prions	691
68. Role of Viruses in Disease	697

Section VI:**Mycology****707**

69. Pathogenesis of Fungal Disease	709
70. Antifungal Agents	719

71. Laboratory Diagnosis of Fungal Diseases	733
72. Superficial and Cutaneous Mycoses	745
73. Subcutaneous Mycoses	755
74. Systemic Mycoses Caused by Endemic Dimorphic Fungal Pathogens	765
75. Opportunistic Mycoses	779
76. Fungal and Fungal-Like Infections of Unusual or Uncertain Etiology	801
77. Mycotoxins and Mycotoxicoses	811
78. Role of Fungi in Disease	817

Section VII:**Parasitology****821**

79. Pathogenesis of Parasitic Disease	823
80. Antiparasitic Agents	829
81. Laboratory Diagnosis of Parasitic Diseases	837
82. Intestinal and Urogenital Protozoa	847
83. Blood and Tissue Protozoa	861
84. Nematodes	879
85. Trematodes	897
86. Cestodes	907
87. Arthropods	917
88. Role of Parasites in Disease	935

Index**939**
