

ELECTRIC POWER DISTRIBUTION, AUTOMATION, PROTECTION, AND CONTROL

James A. Momoh

CRC Press
Taylor & Francis Group

Contents

Preface.....	xv
Author.....	xvii

Chapter 1 Introduction to Distribution Automation Systems 1

1.1 Historical Background	1
1.2 Distribution System Topology and Structure	2
1.3 Distribution Automation (DA) and Control	5
1.4 Summary	6

Chapter 2 Computational Techniques for Distribution

Systems.....	9
2.1 Introduction	9
2.2 Complex Power Concepts	9
2.2.1 Power Equations	11
2.2.1.1 Resistive Element.....	11
2.2.1.2 Inductive Element.....	12
2.2.1.3 Capacitive Element.....	12
2.2.2 Single-Phase Power Formulations.....	13
2.2.3 Balanced Three-Phase Power Formulations	14
2.3 Balanced Voltage to Neutral-Connected System.....	15
2.3.1 Wye- or Y-Connected System.....	15
2.3.2 Delta- or Δ -Connected System	16
2.4 Power Relationship for 3 ϕ Y- Δ -Connected System	18
2.5 Per-Unit System	19
2.5.1 Conversion of a Per Unit from a New Base of Reference.....	20
2.5.2 Per-Unit Formulations for 3 ϕ System	21
2.6 Calculation of Power Losses.....	22
2.7 Voltage Regulation Techniques	24
2.7.1 Capacitor Banks for Voltage Regulation and Power Factor Correction.....	24
2.7.1.1 Shunt Capacitor Installed in Parallel to Distribution Network Model	24
2.7.1.2 Calculation of Voltage Drop for a Distribution Feeder.....	26
2.7.2 Tap-Changing Method for Voltage Regulation.....	26

2.7.3	Voltage-Regulating Transformers	27
2.7.4	Phase Shifter or Regulating Transformer	28
2.8	Voltage-Sag Analysis and Calculation	30
2.9	Equipment Modeling	31
2.9.1	Power Transformers	31
2.9.2	Distribution Transformers	31
2.9.2.1	Principles and Operating Fundamentals	33
2.9.3	Autotransformer Model	34
2.9.4	Cogenerator Model	35
2.9.5	Synchronous Generator Model	36
2.9.6	Inverter-Connected Generator in Photovoltaic Systems	36
2.9.7	Synchronous Generator Model	37
2.10	Components Modeling	37
2.10.1	Line Model in Distribution Systems	37
2.10.2	Shunt Capacitor Model	38
2.10.3	Switch Model	38
2.10.4	Load Models	38
2.10.4.1	Constant Power Loads ($k_1 = k_2 = 0$)	38
2.10.4.2	Constant Current Loads ($k_1 = k_2 = 1$)	39
2.10.4.3	Constant Impedance Loads ($k_1 = k_2 = 2$)	39
2.10.4.4	Composite/Nonlinear Loads	39
2.10.5	SVC Device Model	39
2.11	Distribution System Line Model	40
2.12	Distribution Power Flow Analysis	41
2.13	Distribution System Topology for Development of Load Flow	43
2.14	Review of Classical Power Flow Methods	43
2.14.1	Gauss-Seidal Method	44
2.14.2	Newton-Raphson Method	44
2.14.3	Fast-Decouple Power Flow	45
2.15	Distribution Power Flow Methods	47
2.15.1	Description of Distribution Power Flow Methodologies	47
2.15.1.1	Method 1: Forward/Backward Methods	47
2.15.1.2	Method 2: Power-Flow Method Based on Sensitivity Matrix for Mismatch Calculation	48
2.15.1.3	Method 3: Bus-Impedance Network Method	51
2.16	Illustrative Examples	53
2.16.1	Distribution Transformer Considered for Use as a Step-Down Autotransformer	53
2.16.2	Transformer Short Circuit during an Open-Circuit Test	54
2.16.3	Unbalanced Set of Voltages	56
2.16.4	Newton-Raphson Method	57
2.16.5	Polar Formulation of Load-Flow Equations	59
2.16.6	Gauss-Seidel Method	61
2.17	Summary	63

Chapter 3 Distribution System Protection and Control	67
3.1 Introduction	67
3.1.1 Introduction to Symmetrical Components	68
3.1.2 Sequence Networks Used in Fault Analysis.....	69
3.1.2.1 Computation of Phase and Total Power Using Sequence Networks	70
3.1.2.2 Development of Sequence Networks for Power Systems	72
3.2 Single Line-to-Ground Fault.....	74
3.3 Double Line-to-Ground Fault on Phase B and C.....	76
3.4 Three-Phase Fault Analysis.....	78
3.5 Line-to-Ground and Line-to-Line Faults	80
3.5.1 Single Line-to-Ground Fault	80
3.5.2 Line-to-Line Fault.....	81
3.6 Protection Systems.....	83
3.6.1 Relay	84
3.6.2 Instrument Transformers	84
3.6.2.1 Accounting for Saturation in CT.....	86
3.6.3 Reclosers	86
3.6.4 Fuses	87
3.6.5 Sectionalizer	89
3.7 Protective Relay Technology	89
3.7.1 Digital Relaying	90
3.7.2 Electromechanical Relay Technology.....	91
3.7.3 Induction Disc Relays.....	91
3.7.3.1 Example 1, Coordinating Time-Delay Overcurrent Relays in a Radial System	92
3.7.3.2 Example 2, Radial System Protection.....	94
3.8 System Protection in General	97
3.9 System Protection for Different Power System Zone Components	98
3.9.1 Line Protection with Impedance Distance Relays	98
3.9.1.1 Directional Overcurrent Relays	98
3.9.1.2 Impedance Relay.....	98
3.9.2 Mho Relays.....	99
3.9.3 Ohm Relays	101
3.9.4 Generator, Buses, and Transformer	103
3.9.4.1 Generator Protection	103
3.9.4.2 Bus Protection with Differential Relays.....	104
3.9.4.3 Transformer Protection with Differential Relays.....	105
3.10 Illustrative Examples.....	105
3.10.1 Example 1	105
3.10.2 Example 2	106
3.10.3 Example 3	107

3.10.4 Example 4, Three-Phase Fault.....	108
3.10.5 Example 5, Single-Line-to-Ground (SLG) Fault.....	110
3.11 Summary	112

Chapter 4 Distribution System Reliability and

Maintenance	115
4.1 Introduction	115
4.2 Reliability Evaluation	116
4.2.1 Inputs Required for Historical Assessment	116
4.3 Terminology /Definitions	117
4.4 Reliability Indices	118
4.5 Methods of Reliability Analysis	122
4.5.1 Analytical Methods	123
4.5.2 State Space Diagrams	123
4.5.2.1 Case A, Series Components	124
4.5.2.2 Case B, Parallel Systems	124
4.5.2.3 Case C, Series and Parallel System	124
4.6 Failure Modes and Effects Analysis (FMEA) Method	125
4.7 Event-Tree Analysis Method	125
4.8 Fault-Tree Analysis Method	126
4.9 Unavailability of Power Calculations from the Cut Set	127
4.9.1 Fault Tree Based on Minimal Cut Set	127
4.9.1.1 Determine Power Interruption and Unavailability	127
4.9.1.2 Methodological Approach to Identifying Minimum Cut Set	129
4.9.2 Nonminimal Cut Set in Complete Unavailability	130
4.9.3 Summary of Findings Using Minimal Cut Sets to Identify Causes of Failures	131
4.10 Simulation Techniques for Reliability Analysis	132
4.11 Simulation Methods Utilized for Distribution Reliability Analysis	133
4.11.1 Monte Carlo Simulation Method	133
4.11.1.1 Sequential Monte Carlo Method	133
4.11.1.2 Nonsequential Monte Carlo Simulation	134
4.11.1.3 General Statement: Monte Carlo Simulation	134
4.12 Evaluation of Distribution Reliability Analysis Method	135
4.13 Reliability Database Design	135
4.13.1 DISREL	135
4.13.1.1 General Information on DISREL	136
4.13.1.2 Main Features	136
4.13.1.3 Program Capabilities	136
4.13.1.4 Applications of DISREL	137
4.14 Maintenance and Reliability	138
4.14.1 Repair-to-Failure Process	138

4.14.2	Repair Failure: Repair Process	142
4.14.3	Failure-to-Repair Process	145
4.14.4	Combined Reliability	146
4.15	Maintenance of Distribution Systems	148
4.15.1	Preventive Maintenance	148
4.15.2	Corrective Maintenance	149
4.16	Reliability-Centered Maintenance.....	152
4.17	Security and Reliability-Centered Maintenance.....	153
4.18	Implementation Plan for Various Component-Maintenance Techniques.....	154
4.18.1	Overhead Lines.....	154
4.18.2	Circuit Breakers	154
4.18.3	Transformers	155
4.18.4	Substation Equipment	155
4.19	Illustrative Examples.....	156
4.19.1	Example 1	156
4.19.2	Example 2	158
4.19.3	Example 3	159
4.19.4	Example 4	160
4.20	Summary	161

Chapter 5 Distribution Automation and Control Functions..... 165

5.1	Introduction	165
5.2	Demand-Side Management.....	166
5.2.1	Modeling Challenges and Methodology for Demand-Side Management.....	167
5.2.2	Conceptual Overview of Methodology for DSM Studies	168
5.3	Voltage/VAr Control.....	168
5.3.1	Methods of Voltage/VAr in Distribution Automation	169
5.3.2	Evaluation of Methods Used for Voltage/VAr Control	169
5.3.3	Modeling of Voltage/VAr Control Options.....	170
5.3.4	Formulation of Voltage/VAr	170
5.3.5	System Operating Constraints	171
5.3.6	Methodology	172
5.4	Fault Detection (Distribution Automation Function).....	172
5.4.1	Classical Approaches Used for Solving Detection Techniques.....	173
5.4.1.1	Harmonic Sequence Component Technique	173
5.4.1.2	Amplitude Ratio Technique	173
5.4.1.3	Phase Relationship Technique	173
5.4.1.4	Energy Technique	173
5.4.1.5	Randomness Technique	173
5.4.2	Modeling of Faults/Classification.....	173
5.5	Trouble Calls.....	174
5.6	Restoration Functions	176

5.6.1	Evaluation of Methods.....	176
5.6.2	Optimization Formulation.....	177
5.6.3	Optimization Constraints.....	178
5.6.4	Methodology.....	179
5.7	Reconfiguration of Distribution Systems.....	179
5.7.1	Methods Used for Reconfiguration.....	180
5.7.2	Formulation of Modeling of Reconfiguration.....	180
5.7.2.1	Method of Load Balancing 1.....	181
5.7.2.2	Method of Load Balancing 2.....	181
5.7.2.3	Method of Minimizing Voltage Deviation.....	183
5.7.2.4	Algorithm for Single-Loop Voltage Minimization....	183
5.8	Power Quality.....	185
5.8.1	Techniques for Modeling Harmonics in Power-Quality- Assessment Methodology.....	185
5.8.2	New Approaches of Power Quality.....	187
5.9	Optimization Techniques.....	188
5.9.1	Objectives.....	188
5.9.2	Constraints.....	189
5.9.3	Classical Solution.....	190
5.9.4	Linear Programming.....	192
5.9.5	Mixed-Integer Programming.....	193
5.9.6	Interior-Point Linear Programming.....	195
5.9.7	Sequential Quadratic Programming.....	198
5.10	Illustrative Examples.....	200
5.10.1	Example 1.....	200
5.11	Summary.....	201
Chapter 6 Intelligent Systems in Distribution Automation		205
6.1	Introduction.....	205
6.2	Distribution Automation Function.....	206
6.3	Artificial Intelligence Methods.....	207
6.3.1	Expert System Techniques.....	207
6.3.2	Artificial Neural Networks.....	209
6.3.2.1	Evolution of Connection Weights.....	210
6.3.3	Fuzzy Logic.....	210
6.3.3.1	Fuzzy Sets and Systems.....	211
6.3.3.2	Fuzzy Sets.....	211
6.3.3.3	Fuzzy Systems, Complexity, and Ambiguity.....	211
6.3.4	Genetic Algorithms (GA).....	212
6.4	Intelligent Systems in Distribution Automation.....	213
6.4.1	DSM and AI.....	213
6.5	Voltage/VAR Control.....	215
6.6	Network Reconfiguration via AI.....	216
6.6.1	Further Research Work in Network Reconfiguration Using Artificial Intelligence.....	217

6.7	Fault Detection, Classification, and Location in Distribution Systems	217
6.7.1	Use of AI Techniques for Fault Analysis.....	218
6.8	Summary	218
Chapter 7	Renewable Energy Options and Technology	223
7.1	Introduction	223
7.2	Distributed Generation	223
7.3	Working Definition and Classification of Renewable Energy.....	225
7.4	Renewable Energy Options.....	226
7.4.1	Solar	226
7.4.1.1	Modeling	228
7.4.1.2	PV Systems	231
7.4.1.3	V-I Characteristics.....	231
7.4.2	Wind Turbine Systems.....	232
7.4.2.1	Modeling	233
7.4.2.2	Impact of Tower Height on Wind Power	234
7.4.2.3	Emission Control Technologies	234
7.4.3	Biomass-Bioenergy	235
7.4.3.1	Advantage and Disadvantages of Biomass Power	236
7.4.4	Small and Micro Hydropower	236
7.5	Other Nonrenewable Energy Sources	237
7.5.1	Fuel Cell.....	237
7.5.1.1	Operation of Fuel Cells.....	238
7.5.1.2	Sample Calculation.....	239
7.5.2	Ocean Energy	241
7.5.3	Geothermal Heat Pumps	242
7.5.4	Microturbine and Sterling Engine.....	242
7.5.4.1	Description.....	242
7.5.4.2	Sterling Engine	243
7.5.5	Comparison.....	244
7.6	Distributed Generation Concepts and Benefits	244
7.6.1	Categories of DG	245
7.6.2	Criteria for DG Concepts.....	245
7.6.3	DG Benefits	245
7.7	Illustrative Examples.....	248
7.7.1	Example 1	248
7.7.2	Example 2	249
7.7.3	Example 3	251
7.7.4	Example 4	252
7.7.5	Example 5	253
7.7.6	Example 6	254
7.8	Summary	255

Chapter 8 Distribution Management Systems	259
8.1 Introduction to EMS.....	259
8.1.1 DMS and EMS	259
8.2 Functions of EMS.....	260
8.3 SCADA (Supervisory Control and Data Acquisition)	261
8.4 RTU (Remote Terminal Units)	263
8.5 Distribution Management System (DMS)	263
8.5.1 System Hardware for DMS Station.....	264
8.5.2 SCADA System Functions for DMS.....	264
8.5.3 DMS Functions	265
8.5.4 Substation and Feeder SCADA	265
8.5.5 Feeder Automation	267
8.5.5.1 Fault Location, Isolation, and Restoration (FLIR)	267
8.5.5.2 Voltage/VAR Control.....	268
8.5.5.3 Voltage Control.....	268
8.5.5.4 Substation Automation (SA)	268
8.5.5.5 Trouble-Call and Outage Management (TCOM).....	268
8.5.5.6 Reconfiguration Function	268
8.5.6 Distribution System Analysis (DSA).....	269
8.5.7 Load Management System (LMS).....	269
8.5.8 Geographic Information System (GIS)	269
8.5.9 Customer Information System (CIS).....	270
8.6 Automatic Meter Reading (AMR)	270
8.6.1 Advanced Billing.....	271
8.6.2 Special Features and Benefits of AMR	271
8.6.3 Advancement in AMR Technology	272
8.6.4 Advances in Billing Technology	272
8.7 Cost-Benefit Analysis (CBA) in Distribution Systems.....	272
8.7.1 Cost-Benefit Analysis Methodology.....	273
8.7.2 Function/Payback Correlation.....	273
8.8 Summary	274

Chapter 9 Communication Systems for Distribution

Automation Systems.....	277
9.1 Introduction	277
9.1.1 What is Telecommunication?	277
9.2 Telecommunication in Principle.....	278
9.3 Data Communication in Power System Distribution Network.....	278
9.4 Signal Representation.....	279
9.4.1 Communication Technology for Signal Description.....	280
9.5 Types of Telecommunication Media.....	281
9.5.1 Copper Circuit	281
9.5.2 Twisted Pair.....	282
9.5.3 Coaxial Cable	282
9.5.4 Fiber Optics	282

9.5.5	Microwave/Radio	283
9.5.6	Cellular Transmission	283
9.6	Communication Modulation Techniques	284
9.6.1	Amplitude Modulation (AM)	284
9.6.2	Frequency Modulation (FM)	285
9.6.2.1	Pulse Modulation (PM)	285
9.6.2.2	Frequency Modulation	286
9.6.2.3	Amplitude Modulation	286
9.6.3	Modulation Indices	287
9.6.4	Digital Modulation	287
9.6.4.1	Asynchronous/Synchronous Communications	288
9.6.4.2	Intelligent Electronic Devices (IEDs)	289
9.7	Communication Networking	290
9.7.1	Local Area Network	290
9.7.1.1	Method of Transmission in LAN	291
9.7.1.2	LAN Topologies	292
9.7.2	Metropolitan Area Network (MAN)	293
9.7.3	Wide Area Network (WAN)	294
9.7.3.1	Types of WAN Connection	294
9.7.4	Types of Computing Connectivity	295
9.8	Frame-Relay Communications	295
9.8.1	Frame-Relay Standardization	296
9.8.2	Switched Virtual Circuits	297
9.8.3	Permanent Virtual Circuits	297
9.8.4	Frame-Relay Handling of Congestion Error	297
9.8.5	Frame-Relay Network Implementation	298
9.8.5.1	Public-Carrier-Provided Networks	298
9.8.5.2	Private Enterprise Networks	298
9.8.6	Frame-Relay Frame Formats	299
9.9	Communication Standards Overview	301
9.9.1	Standards Bodies	302
9.9.2	Suite of Standards	302
9.9.3	Interconnection Standards and Regulations	304
9.10	OSI Model	304
9.10.1	Description of OSI Model	305
9.10.1.1	Transport Layers or Lower Layers	305
9.10.1.2	Application Layers or Upper Layers	306
9.10.2	Message Handling	307
9.11	Distribution Network Protocol (DNP3)	308
9.11.1	DNP3 Protocol Three-Layer Structure Description	309
9.12	Utility Communication Architecture (UCA)	309
9.12.1	Overview and Application	309
9.13	Power-Line Carrier Communication	311
9.13.1	Introduction	311
9.13.2	PLC Architecture	311

9.13.2.1	Line Traps.....	312
9.13.2.2	Line-Tuning Units.....	313
9.13.2.3	Hybrids.....	313
9.13.3	Broadband over Power Lines (BPL)	314
9.13.4	Standards.....	314
9.13.5	Current Trends and Applications.....	314
9.14	Security in Telecommunications and Information Technology	316
9.14.1	Vulnerabilities, Threats, and Risks	316
9.14.2	Security Architecture Elements in ITU-T X.805.....	317
9.14.3	Privacy and Data Confidentiality.....	318
9.14.4	Authentication	318
9.14.5	Data Integrity.....	319
9.14.6	Nonrepudiation	319
9.14.7	Other Dimensions Defined in X.805	319
9.14.8	Security Framework Requirements.....	319
9.14.9	Information Security Goals.....	320
9.15	Illustrative Examples.....	321
9.15.1	Example 1	321
9.16	Summary.....	322
Chapter 10	Epilogue.....	325
10.1	Challenges to Distribution Systems for a Competitive Power Utility Environment.....	325
10.2	Protection	326
10.3	Demand Response.....	326
10.4	Communication Advances	326
10.5	Microgrid.....	327
10.6	Standards and Institutional Barriers	327
10.7	Pricing and Billing.....	327
