

7<sup>TH</sup> EDITION

# REINFORCED CONCRETE DESIGN

CHU-KIA WANG • CHARLES G. SALMON • JOSÉ A. PINCHEIRA

# Contents

**Preface** iii  
**Conversion Factors** vii

## **1 Introduction, Materials, and Properties** 1

**1.1** Reinforced Concrete Structures **1.2** Historical Background **1.3** Concrete  
**1.4** Cement **1.5** Aggregates **1.6** Admixtures **1.7** Compressive Strength  
**1.8** Tensile Strength **1.9** Modulus of Elasticity **1.10** Creep and Shrinkage  
**1.11** Concrete Quality Control **1.12** Steel Reinforcement **1.13** SI Units  
Selected References

## **2 Design Methods and Requirements** 29

**2.1** ACI Building Code **2.2** Strength Design and Working Stress Design  
Methods **2.3** Working Stress Method **2.4** Strength Design Method  
**2.5** Comments on Design Methods **2.6** Safety Provisions—General  
**2.7** Safety Provisions—Load Factors and Strength Reduction Factors  
**2.8** Safety Provisions—ACI Appendix C Traditional Load and Strength Reduction  
Factors **2.9** Handbooks and Computer Software **2.10** Dimensions and  
Tolerances **2.11** Accuracy of Computations Selected References

## **3 Strength of Rectangular Sections in Bending** 41

**3.1** General Introduction **3.2** Flexural Behavior and Strength of Rectangular  
Sections **3.3** Whitney Rectangular Stress Distribution **3.4** Nominal Moment  
Strength  $M_n$ —Rectangular Sections Having Tension Reinforcement Only  
**3.5** Balanced Strain Condition **3.6** Tension- and Compression-Controlled  
Sections **3.7** Minimum Reinforcement **3.8** Design of Rectangular Sections in  
Bending Having Tension Reinforcement Only Under ACI-10.3 and 10.5 **3.9** Practical  
Selection for Beam Sizes, Bar Sizes, and Bar Placement **3.10** Nominal Moment  
Strength  $M_n$  of Rectangular Sections Having Both Tension and Compression  
Reinforcement **3.11** Design of Beams Having Both Tension and Compression  
Reinforcement Under ACI-10.3.5 **3.12** Design of Sections in  
Bending—ACI-Appendix B Alternative Provisions **3.13** Non-Rectangular  
Sections Selected References Problems

## **4 Rectangular Sections in Bending Under Service Load Conditions** 95

**4.1** General Introduction **4.2** Fundamental Assumption **4.3** Modulus of Elasticity  
Ratio  $n$  **4.4** Equilibrium Conditions **4.5** Method of Transformed Section  
**4.6** Investigation of Rectangular Sections in Bending with Tension Reinforcement  
Only **4.7** Design of Rectangular Sections in Bending with Tension Reinforcement  
Only **4.8** Serviceability—Deflections **4.9** Serviceability—Flexural Crack Control  
for Beams and One-Way Slabs **4.10** Serviceability—Side Face Crack Control for  
Large Beams Selected References Problems

## 5 Shear Strength and Shear Reinforcement 117

5.1 Introduction 5.2 The Shear Stress Formula Based on Linear Stress Distribution 5.3 The Combined Stress Formula 5.4 Behavior of Beams without Shear Reinforcement 5.5 Shear Strength of Beams without Shear Reinforcement—ACI Code 5.6 Function of Shear Reinforcement 5.7 Truss Model for Reinforced Concrete Beams 5.8 Shear Strength of Beams with Shear Reinforcement—ACI Code 5.9 Lower and Upper Limits for Amount of Shear Reinforcement 5.10 Critical Section for Nominal Shear Strength Calculation 5.11 ACI Code Provisions for Shear Strength of Beams 5.12 Shear Strength of Beams—Design Examples 5.13 Shear Strength of Members Under Combined Bending and Axial Load 5.14 Strut-and-Tie Models 5.15 Deep Beams 5.16 Shear-Friction 5.17 Brackets and Corbels Selected References Problems

## 6 Development of Reinforcement 220

6.1 General 6.2 Development Length 6.3 Flexural Bond 6.4 Bond Failure Mechanisms 6.5 Moment Capacity Diagram—Bar Bends and Cutoffs 6.6 Development Length for Tension Reinforcement—ACI Code 6.7 Modification Factors  $\psi_t$ ,  $\psi_s$ , and  $\lambda$  to the Bar Development Length Equations—ACI Code 6.8 Development Length for Compression Reinforcement 6.9 Development Length for Bundled Bars 6.10 Development Length for a Tension Bar Terminating in a Standard Hook 6.11 Bar Cutoffs in Negative Moment Region of Continuous Beams 6.12 Bar Cutoffs in Positive Moment Region of Continuous Beams 6.13 Bar Cutoffs in Uniformly Loaded Cantilever Beams 6.14 Development of Reinforcement at Simple Supports and at Points of Inflection 6.15 Development of Shear Reinforcement 6.16 Tension Lap Splices 6.17 Welded Splices and Mechanical Connections in Tension 6.18 Compression Lap Splices 6.19 End Bearing Connections, Welded Splices, and Mechanical Connections in Compression 6.20 Splices for Members Under Compression and Bending 6.21 Design Examples Selected References Problems

## 7 Continuity in Building Frames of Reinforced Concrete 287

7.1 Common Building Frames 7.2 Positions of Live Load for Moment Envelope 7.3 Method of Analysis 7.4 ACI Moment Coefficients 7.5 ACI Moment Diagrams 7.6 Shear Envelope for Design Selected References Problems

## 8 Design of One-Way Slabs 305

8.1 Definition 8.2 Design Methods 8.3 Thickness of Slab 8.4 Choice of Reinforcement 8.5 Continuity Analysis 8.6 Shrinkage and Temperature Reinforcement 8.7 Bar Details Selected References Problems

## 9 T-Sections in Bending 319

9.1 General 9.2 Comparison of Rectangular and T-Sections 9.3 Effective Flange Width 9.4 Nominal Moment Strength  $M_n$  of T-Sections 9.5 Maximum Tension Reinforcement Permitted in T-Sections by ACI-Appendix B Alternative Provisions 9.6 Design of T-Sections in Bending Selected References Problems

## 10 Continuous Slab–Beam–Girder and Concrete Joist Floor Systems 334

10.1 Introduction 10.2 Size of Beam Web 10.3 Continuous Frame Analysis for Beams 10.4 Choice of Longitudinal Reinforcement in Beams 10.5 Shear Reinforcement in Beams 10.6 Details of Bars in Beams 10.7 Size of Girder Web 10.8 Continuous Frame Analysis for Girders 10.9 Choice of Longitudinal Reinforcement in Girders 10.10 One-Way Joist Floor Construction 10.11 Design of Concrete Joist Floors 10.12 Redistribution of Moments—Introduction to Limit Analysis Selected References Problems

## 11 Monolithic Beam-to-Column Joints 385

11.1 Monolithic Joints 11.2 Forces Acting on a Joint 11.3 Joint Transverse Reinforcement 11.4 Shear Through a Joint 11.5 Design Examples Selected References Problems

## 12 Cantilever Retaining Walls 404

12.1 Types of Retaining Structures 12.2 Forces on Retaining Walls 12.3 Stability Requirements 12.4 Preliminary Proportioning of Cantilever Walls 12.5 Design Example—Cantilever Retaining Wall Selected References Problems

## 13 Members in Compression and Bending 430

13.1 Introduction 13.2 Types of Columns 13.3 Behavior of Axially Loaded Columns 13.4 Safety Provisions for Compression Members 13.5 Concentrically Loaded Short Columns 13.6 Strength Interaction Diagram 13.7 Length Effects 13.8 Lateral Ties 13.9 Spiral Reinforcement and Longitudinal Bar Placement 13.10 Limits on Percentage of Reinforcement 13.11 Maximum Strength in Axial Compression—ACI Code 13.12 Balanced Strain Condition—Rectangular Sections 13.13 Nominal Strength of a Compression-Controlled Rectangular Section 13.14 Nominal Strength of a Rectangular Section Having Eccentricity  $e$  Greater Than Balanced Eccentricity 13.15 Design for Strength—Region I, Minimum Eccentricity 13.16 Design for Strength—Region II, Compression-Controlled Sections ( $e_{\min} < e < e_b$ ) 13.17 Design for Strength—Transition Zone and Tension-Controlled Sections ( $e > e_b$ ) 13.18 Circular Sections as Compression Members with Bending 13.19 Axial Tension and Bending Moment 13.20 Biaxial Bending and Compression Selected References Problems

## 14 Deflections 514

14.1 General 14.2 Deflections for Elastic Sections 14.3 Modulus of Elasticity 14.4 Moment of Inertia 14.5 Instantaneous Deflections in Design 14.6 Creep Effect on Deflections Under Sustained Load 14.7 Shrinkage Effect on Deflections Under Sustained Load 14.8 Creep and Shrinkage Deflection—ACI Code Method 14.9 Creep and Shrinkage Deflection—Alternate Procedures 14.10 ACI Minimum Depth of Flexural Members 14.11 Span-to-Depth Ratio to Account for Cracking and Sustained Load Effects 14.12 ACI Code Deflection Provisions—Beam Examples Selected References Problems

**15 Length Effects on Columns 561**

**15.1** General **15.2** Buckling of Concentrically Loaded Columns **15.3** Equivalent Pin-End Lengths **15.4** Moment Magnification—Simplified Treatment for Members in Single Curvature Without Joint Translation (i.e., No Sidesway) **15.5** Moment Magnification—Members Subject to End Moments Only—Without Joint Translation **15.6** Members with Sidesway Possible—Unbraced (Sway) Frames **15.7** Interaction Diagrams—Effect of Slenderness **15.8** ACI Code—General Analysis Method **15.9** ACI Code—Moment Magnifier Method for Nonsway Frames **15.10** ACI Code—Moment Magnifier Method for Sway Frames **15.11** Alignment Charts for Effective Length Factor  $k$  **15.12** MacGregor–Hage Moment Magnifier Method **15.13** Furlong’s General Analysis for Unbraced Frames **15.14** Minimum Eccentricity in Design **15.15** Biaxial Bending and Axial Compression **15.16** ACI Code—Slenderness Ratio Limitations **15.17** Restraining Effect of Beams **15.18** Examples  
Selected References Problems

**16 Design of Two-Way Floor Systems 620**

**16.1** General Description **16.2** General Design Concept of ACI Code **16.3** Total Factored Static Moment **16.4** Ratio of Flexural Stiffnesses of Longitudinal Beam to Slab **16.5** Minimum Slab Thickness for Deflection Control **16.6** Nominal Requirements for Slab Thickness and Size of Edge Beams, Column Capital, and Drop Panel **16.7** Direct Design Method—Limitations **16.8** Direct Design Method—Longitudinal Distribution of Moments **16.9** Direct Design Method—Effect of Pattern Loadings on Positive Moment **16.10** Direct Design Method—Procedure for Computation of Longitudinal Moments **16.11** Torsion Stiffness of the Transverse Elements **16.12** Transverse Distribution of Longitudinal Moment **16.13** Design of Slab Thickness and Reinforcement **16.14** Beam (if Used) Size Requirement in Flexure and Shear **16.15** Shear Strength in Two-Way Floor Systems **16.16** Shear Reinforcement in Flat Plate Floors **16.17** Direct Design Method—Moments in Columns **16.18** Transfer of Moment and Shear at Junction of Slab and Column **16.19** Openings and Corner Connections in Flat Slabs **16.20** Equivalent Frame Method for Gravity and Lateral Load Analysis  
Selected References Problems

**17 Equivalent Frame Analysis of Two-Way Floor Systems in Unbraced Frames 710**

**17.1** General Introduction **17.2** Analytical Models for Elastic Frame Analysis **17.3** Treatment of Model 1 as a Plane Frame **17.4** Reduced Stiffness Matrix and Reduced Fixed-End Moments for a Flexural Element with Rotational Springs at Ends **17.5** The ACI Equivalent Column **17.6** Equivalent Column Method (Model 1A) vs Equivalent Beam Method (Model 1B) **17.7** Treatment of Model 1 as a Space Frame **17.8** Model 2 with Torsion Element Connecting Column Strip to Middle Strip **17.9** Concluding Remarks  
Selected References

**18 Yield Line Theory of Slabs 732**

**18.1** Introduction **18.2** General Concept **18.3** Fundamental Assumptions **18.4** Methods of Analysis **18.5** Yield Line Analysis of One-Way Slabs **18.6** Work Done by Yield Line Moments in Rigid Body Rotation of Slab Segment **18.7** Nodal Force at Intersection of Yield Line with Free Edge **18.8** Nodal Forces at Intersection

of Three Yield Lines 18.9 Yield Line Analysis of Rectangular Two-Way Slabs  
18.10 Corner Effects in Rectangular Slabs 18.11 Application of Yield Line Analysis  
to Special Cases Selected References Problems

## 19 Torsion 761

19.1 General 19.2 Torsional Stress in Homogeneous Sections 19.3 Torsional  
Stiffness of Homogeneous Sections 19.4 Effects of Torsional Stiffness on  
Compatibility Torsion 19.5 Torsional Moment Strength  $T_{cr}$  at Cracking  
19.6 Strength of Reinforced Concrete Rectangular Sections in Torsion—Skew  
Bending Theory 19.7 Strength of Reinforced Concrete Rectangular Sections in  
Torsion—Space Truss Analogy 19.8 Strength of Sections in Combined Bending and  
Torsion 19.9 Strength of Sections in Combined Shear and Torsion 19.10 Strength  
Interaction Surface for Combined Bending, Shear, and Torsion 19.11 Torsional  
Strength of Concrete and Hoop Reinforcement—ACI Code 19.12 Combined Torsion  
with Shear or Bending—ACI Code 19.13 Minimum Requirements for Torsional  
Reinforcement—ACI Code 19.14 Examples Selected References Problems

## 20 Footings 812

20.1 Purpose of Footings 20.2 Bearing Capacity of Soil 20.3 Types of  
Footings 20.4 Types of Failure of Footings 20.5 Shear Strength of Footings  
20.6 Moment Strength of Footings and Development of Reinforcement  
20.7 Proportioning Footing Areas for Equal Settlement 20.8 Investigation of Square  
Spread Footings 20.9 Design of Square Spread Footings 20.10 Design of  
Rectangular Footings 20.11 Design of Plain and Reinforced Concrete Wall  
Footings 20.12 Combined Footings 20.13 Design of Combined Footings  
20.14 Pile Footings Selected References Problems

## 21 Introduction to Prestressed Concrete 858

21.1 Introduction 21.2 Historical Background 21.3 Advantages and  
Disadvantages of Prestressed Concrete Construction 21.4 Pretensioned and  
Posttensioned Beam Behavior 21.5 Service Load Stresses on Flexural  
Members—Tendons Having Varying Amounts of Eccentricity 21.6 Three Basic  
Concepts of Prestressed Concrete 21.7 Loss of Prestress 21.8 Nominal Strength  
 $M_n$  of Flexural Members 21.9 Cracking Moment 21.10 Shear Strength of  
Members without Shear Reinforcement 21.11 Shear Reinforcement for Prestressed  
Concrete Beams 21.12 Development of Reinforcement  
21.13 Proportioning of Cross-Sections for Flexure When No Tension is  
Permitted 21.14 Additional Topics Selected References Problems

## 22 Composite Construction 915

22.1 Introduction 22.2 Composite Action 22.3 Advantages and Disadvantages of  
Composite Construction 22.4 Effective Slab Width 22.5 Computation of Section  
Properties 22.6 Working Stresses with and without Shoring 22.7 Strength of  
Composite Sections 22.8 Shear Connection 22.9 Deflections 22.10 Slab on  
Precast Reinforced Concrete Beam—Strength Design 22.11 Slab on Steel  
Beam 22.12 Composite Columns Selected References Problems
