# CONTENTS

**PREFACE** viii

**CHAPTER 1 INTRODUCTION** 1

1.1 Mechanics 2
1.2 Basic Concepts 2
Problems 1.1–1.4 4
1.3 Units 4
1.3.1 SI Units 5
1.3.2 Customary Units 6
1.3.3 Conversion between Systems of Units 7
Problems 1.5–1.9 10
1.4 Numerical Calculations 10
1.5 Problem-solving Strategy 11
1.6 Computational Software 12

**CHAPTER 2 VECTOR ANALYIS** 13

2.1 Introduction 14
2.2 Vectors 15
2.2.1 Definition of a Scalar and a Vector 15
2.2.2 Vector Addition 16
2.2.3 Multiplication of a Vector by a Scalar 20
2.2.4 Vector Components 20
2.2.5 Resolution of a Vector into Components 25
2.3 Forces and Their Characteristics 30
2.3.1 Concurrent Coplanar Forces 31
Problems 2.1–2.21 32
2.4 Three-dimensional Cartesian Coordinates and Unit Base Vectors 35
2.4.1 Unit Base Vectors 36
2.4.2 Vector Equality in Component Notation 37
2.4.3 Vector Addition by Components 38
2.4.4 Multiplication of a Vector by a Scalar 38
2.4.5 Vector Subtraction 39
2.4.6 General Unit Vectors 39
2.4.7 Vector Directions in Space 39
2.4.8 Matrix Notation for Vectors 41
2.5 Computation of Vector Operations 42
Problems 2.22–2.59 45

2.6 Components of a Vector in Nonorthogonal Directions 49
2.7 Systems of Linear Equations 53
2.7.1 Matrices 55
Problems 2.60–2.78 59
2.8 Scalar Product of Two Vectors 60
2.8.1 Applications of the Scalar Product 62
Problems 2.79–2.95 65
2.9 Vector Product or Cross Product 67
2.9.1 Multiple Products of Vectors 70
Problems 2.96–2.111 74
2.10 Direct Vector Solutions 76
Problems 2.112–2.122 78

**CHAPTER 3 PARTICLE EQUILIBRIUM 81**

3.1 Free-body Diagrams of a Particle 82
Problems 3.1–3.10 85
3.2 Equilibrium of a Particle 87
Problems 3.11–3.37 96
3.3 Springs 101
3.4 Statically Indeterminate Problems 104
Problems 3.38–3.46 107
3.5 Special Sections 108
3.5A Introduction to Friction 108
Problems 3.47–3.63 113
3.5B Keystone of the Arch 115
Problems 3.64–3.65 119

**CHAPTER 4 RIGID BODIES: EQUIVALENT FORCE SYSTEMS 121**

4.1 Rigid Bodies 122
4.2 Modeling of Rigid Bodies and Moment of a Force 123
Problems 4.1–4.10 126
4.3 Moment of a Force about a Point in Space 127
4.3.1 Direct Vector Solutions 129
4.4 Varignon's Theorem 131
Problems 4.11–4.40 136
4.5 Moment of a Force about an Axis 140
Problems 4.41–4.51 142
4.6 Moment of a Couple 144
Problems 4.52–4.61 146
4.7 Equivalent Force Systems 148
Problems 4.62–4.65 151
4.8 Special Equivalent Force Systems 151
4.8.1 Concurrent Force Systems 153
4.8.2 Coplanar Force Systems 153
4.8.3 Parallel Force Systems 155
4.9 General Equivalent Force Systems 158
4.9.1 The Wrench 160
Problems 4.66–4.84 165

## CHAPTER 5 DISTRIBUTED FORCES: CENTROIDS AND CENTER OF GRAVITY 169

5.1 Introduction 170
5.2 Center of Mass and Center of Gravity 172
5.2.1 Center of Mass 172
5.2.2 Center of Gravity 173
5.3 Average Position: Centroids of Areas, Volumes, and Lines; The First Moment 176
5.3.1 Centroid of an Area 176
5.3.2 Centroid of a Volume 179
5.3.3 Centroid of a Line 180
5.3.4 Centroid of a Curve in Space 181
Problems 5.1–5.25 183
5.4 Theorems of Pappus and Guldinus 186
Problems 5.26–5.32 188
5.5 Centroids of Composite Bodies 88
Problems 5.33–5.51 193
5.6 Distributed Loads on Beams 196
Problems 5.52–5.62 198
5.7 Forces Due to Fluid Pressure Acting on a Submerged Surface 199
5.7.1 Buoyancy 200
Problems 5.63–5.70 202

## CHAPTER 6 EQUILIBRIUM OF RIGID BODIES 205

6.1 Introduction 206
6.2 Supports for a Two-dimensional Model 207
6.3 Supports for a Three-dimensional Model 210
6.4 Free-body Diagram 213
Problems 6.1–6.10 215
6.5 Equilibrium of a Rigid Body in Two Dimensions 217
6.5.1 Solution Strategy 218
6.5.2 A Two-Force Member 219
6.5.3 A Three-Force Member 219
Problems 6.11–6.33 227
6.6 Equilibrium of a Rigid Body in Three Dimensions 231
6.6.1 Constraints 233
6.7 Statically Indeterminate Reactions and Improper Constraints 237
Problems 6.34–6.57 244

## CHAPTER 7 ANALYSIS OF STRUCTURES 249

7.1 Introduction 250
7.2 Planar Trusses 251
7.3 Simple Trusses 253
7.4 Method of Joints 254
7.5 Method of Joints Using Matrix Techniques 259
Problems 7.1–7.30 262
7.6 Method of Sections 266
Problems 7.31–7.55 268

7.7 Space Trusses 272
Problems 7.56–7.66 274
7.8 Compound Trusses 277
7.9 Frames and Machines 278
Problems 7.67–7.97 281

**CHAPTER 8 INTERNAL FORCES IN STRUCTURAL MEMBERS 289**

8.1 Introduction 290
8.2 Internal Forces in a Member 290
Problems 8.1–8.17 295
8.3 Types of Loading and Supports in Beams 296
8.4 Shear and Bending Moments in Beams 297
8.4.1 Relationship between the Load Distribution, the Shear Force, and the Bending Moment 300
Problems 8.18–8.41 304
8.5 Discontinuity Functions for Beam Equations 308
Problems 8.42–8.53 314
8.6 Cables 315
8.6.1 Cable Subjected to Concentrated Loads 315
8.6.2 Cables Supporting Loads Distributed Uniformly along a Horizontal Line 317
8.6.3 Cable Supporting Loads Distributed Uniformly along Its Own Length 319
Problems 8.54–8.70 321

**CHAPTER 9 FRICTION 327**

9.1 Introduction 328
9.2 Coulomb Friction 331
Problems 9.1–9.62 338
9.3 Wedges 345
Problems 9.63–9.81 349
9.4 Square-Threaded Screws 351
Problems 9.82–9.96 355
9.5 Belt Friction 356
9.5.1 V-belts 358
9.6 Bearings 359
9.7 Thrust Bearings, Collars, and Clutches 362
9.8 Rolling Resistance 363
Problems 9.97–9.117 364

**CHAPTER 10 MOMENTS OF INERTIA 369**

10.1 Introduction 370
10.2 Second Moment of an Area 370
10.2.1 Determination of the Second Moment of an Area by Integration 371
10.3 Polar Moment of Inertia 371
10.4 Second Moment of an Area about Centroidal Axes for Specific Areas 372
Problems 10.1–10.21 373

10.5 Parallel-Axis Theorem for the Second Moment of Area 374
10.6 Radius of Gyration of an Area 376
Problems 10.22–10.32 377
10.7 Second Moments of Composite Areas 378
Problems 10.33–10.45 381
10.8 Principal Second Moments of Area 382
10.8.1 Product Moment of an Area, or Product Moment of Inertia 383
10.8.2 Rotation of Axes 383
Problems 10.46–10.59 387
10.9 Mohr's Circle to Determine Principal Second Moments of Area 389
Problems 10.60–10.73 391
10.10 Eigenvalue Problem 392
Problems 10.74–10.87 394
10.11 Mass Moments of Inertia 396
10.11.1 Parallel-Axis Theorem 397
Problems 10.88–10.102 399

**CHAPTER 11 VIRTUAL WORK 405**

11.1 Introduction 406
11.1.1 Work—By a Force or Moment 406
11.2 Virtual Work 407
11.3 Principle of Virtual Work for a System of Connected Rigid Bodies 408
Problems 11.1–11.28 411
11.4 Finite Work of a Force and Moment 415
Problems 11.29–11.34 418
11.5 Conservative Forces and Potential Energy 419
11.6 Potential Energy and Equilibrium 422
11.7 Stability of Equilibrium 423
Problems 11.35–11.60 425

**APPENDIX 431**

Solution of Systems of Linear Equations 431
Gauss–Jordan Reduction 431
Inverse of a Matrix 433
Solution of Vector Equations 435

**STATICS INDEX DICTIONARY 439**

**ANSWERS** 449

**INDEX** 465
