Preface	vii
Acknowledgements	ix
Introduction	xi
Units and conversion factors	xv
1 Test facility specification, system integration and project organization	1
2 The test cell as a thermodynamic system	14
3 Vibration and noise	21
4 Test cell and control room design: an overall view	47
5 Ventilation and air conditioning	72
6 Test cell cooling water and exhaust gas systems	108
7 Fuel and oil storage, supply and treatment	129
8 Dynamometers and the measurement of torque	144
9 Coupling the engine to the dynamometer	170
10 Electrical design considerations	197
11 Test cell control and data acquisition	216
12 Measurement of fuel, combustion air and oil consumption	242
13 Thermal efficiency, measurement of heat and mechanical losses	263
14 The combustion process and combustion analysis	282
15 The test department organization, health and safety management, risk assessment correlation of results and design of experiments	308
16 Exhaust emissions	324
17 Tribology, fuel and lubrication testing	354
18 Chassis or rolling road dynamometers	368
19 Data collection, handling, post-test processing, engine calibration and mapping	395
20 The pursuit and definition of accuracy: statistical analysis of test results	408
Index	423
