About the authors	xxi
Introduction	1
1 Military roles	7
1.1 Introduction	7
1.2 Air superiority	8
1.2.1 Role description	8
1.2.2 Key performance characteristics	8
1.2.3 Crew complement	9
1.2.4 Systems architecture	9
1.2.5 Air superiority – aircraft types	11
1.3 Ground attack	11
1.3.1 Role description	11
1.3.2 Key performance characteristics	11
1.3.3 Crew complement	12
1.3.4 Systems architecture	12
1.3.5 Ground attack – aircraft types	12
1.4 Strategic bomber	12
1.4.1 Role description	12
1.4.2 Key performance characteristics	14
1.4.3 Crew complement	14
1.4.4 Systems architecture	14
1.4.5 Strategic bomber – aircraft types	15
1.5 Maritime patrol	16
1.5.1 Role description	16
1.5.2 Anti-surface unit warfare (ASuW) role	17
1.5.3 Anti-submarine warfare (ASW) role	17
1.5.4 Search and rescue (SAR) role	18
1.5.4.1 Datum searches	19

1.5.4.2	Area searches	20
1.5.4.3	Scene-of-action commander	20
1.5.5	Exclusive economic zone protection	21
1.5.5.1	Oil and gas rig patrols	21
1.5.5.2	Anti-pollution	21
1.5.5.3	Fishery protection	21
1.5.5.4	Customs and excise cooperation	21
1.5.6	Key performance characteristics	22
1.5.7	Crew complement	22
1.5.8	Systems architecture	22
1.5.9	MPA aircraft types	22
1.6	Battlefield surveillance	24
1.6.1	Role description	24
1.6.2	Key performance characteristics	24
1.6.3	Crew complement	25
1.6.4	Systems architecture	25
1.6.5	Battlefield surveillance aircraft types	25
1.7	Airborne early warning	26
1.7.1	Role description	26
1.7.2	Key performance characteristics	27
1.7.3	Crew complement	27
1.7.4	Systems architecture	27
1.7.5	AEW aircraft types	28
1.8	Electronic warfare	29
1.8.1	Role description	29
1.8.2	Electronic countermeasures	29
1.8.3	Electronic support measures	30
1.8.4	Signals intelligence (SIGINT)	30
1.8.5	Key performance characteristics	31
1.8.6	Crew complement	31
1.8.7	Systems architecture	32
1.8.8	Example aircraft types	32
1.9	Photographic reconnaissance	32
1.9.1	Role description	32
1.9.2	Key performance characteristics	34
1.9.3	Crew complement	34
1.9.4	Systems architecture	34
1.9.5	Typical aircraft types	34
1.10	Air-to-air refuelling	35
1.10.1	Role description	35
1.10.2	Key performance characteristics	37
1.10.3	Crew complement	37
1.10.4	Systems architecture	37
1.10.5	Aircraft types	38
1.11	Troop/materiel transport	39
1.11.1	Role description	39
1.11.2	Key performance characteristics	39

1.11.3	Crew complement	39
1.11.4	Systems architecture	39
1.11.5	Typical aircraft types	40
1.12	Unmanned air vehicles	41
1.13	Training	43
1.13.1	Typical aircraft types	45
1.14	Special roles	45
1.14.1	Examples of special roles	45
1.15	Summary	45
	Further reading	46
2	Technology and architectures	47
2.1	Evolution of avionics architectures	47
2.1.1	Distributed analogue architecture	49
2.1.2	Distributed digital architecture	50
2.1.3	Federated digital architecture	52
2.1.4	Integrated modular architecture	54
2.1.5	Open architecture issues	54
2.1.6	Impact of digital systems	56
2.1.7	Response of the services to digital avionics systems issues	57
2.1.8	Need to embrace COTS	58
2.2	Aerospace-specific data buses	60
2.2.1	Tornado serial	60
2.2.2	ARINC 429	62
2.2.3	MIL-STD-1553B	64
2.2.4	STANAG 3910	67
2.3	JIAWG architecture	70
2.3.1	Generic JIAWG architecture	70
2.3.2	High-speed data bus	72
2.3.3	PI bus	73
2.3.4	TM bus	73
2.3.5	Obsolescence issues	73
2.4	COTS data buses	74
2.4.1	Fibre channel	75
2.4.2	Fibre channel options	77
2.4.3	IEEE 1394 firewire	77
2.5	Real-time operating systems	78
2.5.1	Key attributes	78
2.5.2	Safety	79
2.5.3	Software partitioning	80
2.5.4	Software languages	82
2.5.5	Security	82
2.6	RF integration	83
2.6.1	Primary radar evolution	84
2.6.1.1	Independent systems of the 1950s	84
2.6.1.2	Integrated systems of the 1960s and 1970s	85
2.6.1.3	Integrated modular architecture of the 1990s	86

2.6.2	JIAWG RF subsystem integration	87
2.7	Pave Pace/F-35 shared aperture architecture	94
	References	97
3	Basic radar systems	99
3.1	Basic principles of radar	99
3.2	Radar antenna characteristics	104
3.3	Major radar modes	107
3.3.1	Air-to-air search	107
3.3.2	Air-to-air tracking	108
3.3.3	Air-to-air track-while-scan	109
3.3.4	Ground mapping	110
3.4	Antenna directional properties	111
3.5	Pulsed radar architecture	112
3.5.1	Pulsed radar components	112
3.5.1.1	Modulator	113
3.5.1.2	Transmitter	113
3.5.1.3	Antenna	113
3.5.1.4	Receiver	114
3.5.1.5	Video processor	114
3.5.2	Pulsed modulation	114
3.5.3	Receiver characteristics	116
3.5.3.1	Noise	116
3.5.3.2	Clutter	122
3.5.4	Radar range equation	122
3.6	Doppler radar	123
3.7	Other uses of radar	124
3.7.1	Frequency modulation ranging	124
3.7.2	Terrain-following radar	125
3.7.3	Continuous wave illumination	126
3.7.4	Multimode operation	127
3.8	Target tracking	128
3.8.1	Range tracking	128
3.8.2	Angle tracking	129
3.8.2.1	Sequential lobing	129
3.8.2.2	Conical scan	130
3.8.2.3	Monopulse	132
	References	134
4	Advanced radar systems	135
4.1	Pulse compression	135
4.1.1	Coherent transmission	137
4.1.2	Fourier transform	140
4.2	Pulsed Doppler operation	140
4.2.1	Range ambiguities	143
4.2.2	Effect of the PRF on the frequency spectrum – Doppler ambiguities	144
4.2.3	Range and Doppler ambiguities	145

4.3	Pulsed Doppler radar implementation	149
4.3.1	Receiver	150
4.3.2	Signal processor	150
4.3.3	Radar data processor	154
4.4	Advanced antennas	156
4.4.1	Principle of the phased array	156
4.4.2	Planar arrays	157
4.4.3	Electronically scanned array	158
4.4.4	Active electronically steered array (AESA)	160
4.5	Synthetic aperture radar	164
4.6	Low observability	170
4.6.1	Factors affecting the radar cross-section	173
4.6.2	Reducing the RCS	178
4.6.3	Comparative RCS values	179
4.6.4	Low probability of intercept operation	180
	References	181
5	Electrooptics	183
5.1	Introduction	183
5.2	Television	186
5.3	Night-vision goggles	189
5.4	IR imaging	191
5.4.1	IR imaging device	194
5.4.2	Rotating scanner	196
5.4.3	Planar image	197
5.4.4	Focal plane array or 'staring array'	198
5.4.5	IR detector technology	199
5.5	IR tracking	202
5.5.1	IR seeker heads	202
5.5.2	Image tracking	204
5.5.3	IR search and track systems	205
5.6	Lasers	206
5.6.1	Principles of operation	207
5.6.2	Laser sensor applications	211
5.6.3	US Air Force airborne laser (ABL)	214
5.6.4	Laser safety	215
5.7	Integrated systems	216
5.7.1	Electrooptic sensor fusion	216
5.7.2	Pod installations	218
5.7.3	Turret installations	220
5.7.4	Internal installations	224
	References	228
6	Electronic warfare	229
6.1	Introduction	229
6.2	Signals intelligence (SIGINT)	233
6.2.1	Electronic intelligence (ELINT)	234

6.2.2	Communications intelligence (COMINT)	236
6.3	Electronic support measures	238
6.4	Electronic countermeasures and counter-countermeasures	241
6.4.1	Noise jamming	241
6.4.1.1	Burnthrough	243
6.4.2	Deception jamming	244
6.4.3	Deployment of the jamming platform	245
6.4.4	Low probability of intercept (LPI) radar	246
6.5	Defensive aids	247
6.5.1	Radar warning receiver	248
6.5.2	Missile warning receiver	249
6.5.3	Laser warning systems	249
6.5.4	Countermeasure dispensers	250
6.5.4.1	Chaff and flares	251
6.5.4.2	Towed decoy	252
6.5.5	Integrated defensive aids systems	253
6.5.5.1	AN/APG-79 AESA radar	253
6.5.5.2	AN/ALR-67 radar warning receiver	253
6.5.5.3	AN/ALQ-214 integrated defensive electronic countermeasures (IDECM)	254
6.5.5.4	AN/ALE-47 countermeasure dispenser	255
