

CONTENTS

1. Wave Packet Analysis of Femtosecond Stimulated Raman Spectroscopy	1
<i>K. Niu, B. Zhao, Z. Sun and Soo-Y. Lee</i>	
1. Introduction	2
2. Theory	3
2.1 Coupled wave theory of FSRS and its limitations	3
2.2 Quantum theory of FSRS	8
3. Applications, Results and Discussion	18
3.1 Analytic results for FSRS from a stationary state with polyatomic harmonic potentials	18
3.2 Application to FSRS of Rhodamine 6G	24
3.3 Application to the FSRS from a coherent vibrational state of CDCl_3	31
3.3.1 Direct fifth-order process	33
3.3.2 Cascade processes	36
3.3.3 Direct fifth-order and cascade results of CDCl_3	41
4. Conclusion and outlook	47
Acknowledgements	49
References	49

2. Field-Free Molecular Alignment by Two Femosecond Laser Pulses	53.
--	-----

Chengyin Wu, Hongbing Jiang and Qihuang Gong

1. Introduction	53
2. Theory	55
2.1 Creation of rotational wavepacket	55
2.2 Characterization of rotational wavepacket	57
2.3 Control of rotational wavepacket	60
3. Experimental Method	66
4. Results and Discussion	73
4.1 Manipulation of alignment structures	73
4.2 Enhancement of molecular alignment	79
4.3 Control of molecular population	83
5. Applications of Field-Free Aligned Molecules — Frequency Tuning of Few Cycle Femtosecond Laser Pulses	87
5.1 Parameters	88
5.2 Simulation	91
6. Conclusions	94
Acknowledgements	95
References	95
3. High-Order Harmonic Generation from C ₆₀ Fullerene Plasma	101
<i>T. Ozaki</i>	
1. Introduction	101
2. Experimental Set-up	104
3. Results and Discussion	105
3.1 Observation of high-order harmonics from C ₆₀ fullerenes	105
3.2 Influence of various experimental parameters on the HHG efficiency in fullerene plasma	108
3.3 Simulations of harmonic spectra from C ₆₀ fullerenes	115
3.4 Discussions	121

4. Conclusions	123
References	124
4. Attosecond Pulse Generation, Characterization and Application	127
<i>Shouyuan Chen, Steve Gilbertson, He Wang, Michael Chini, Kun Zhao, Sabih Khan, Yi Wu, and Zenghu Chang</i>	
1. Introduction	127
2. Ultrafast Laser Development and CE Phase Stabilization for Attosecond Pulse Generation	128
2.1 CE phase drift caused by the grating drift in stretcher and compressor	130
2.2 CE phase stabilization of multi-pass and regenerative amplifiers	133
3. Attosecond Gating Technology	137
3.1 Two-color gating	139
3.2 Polarization gating	140
3.3 Double optical gating	142
3.4 Generalized double optical gating	142
3.5 DOG and GDOG optics	143
4. Attosecond Pulse Measurement and Characterization	146
4.1 Attosecond streak camera	146
4.2 Frequency-resolved optical gating for complete reconstruction of attosecond bursts	151
4.3 Phase retrieval by omega oscillation filtering	154
5. Application of Attosecond Pulse	158
5.1 Study of Helium autoionization by attosecond streaking	158
5.2 Time resolved spectroscopy study of Argon	163
6. Summary and Outlook	170
References	170
5. Near-Field Imaging of Optical-Field Structures and Plasmon Wave Functions in Metal Nanostructures	175
<i>Hiromi Okamoto and Kohei Imura</i>	

1.	Introduction	175
2.	What can be Observed by Near-Field Optical Imaging?	177
2.1	Near-field excitation of electromagnetic modes	177
2.2	Analogy between the observation of electromagnetic modes and oscillating strings	179
2.3	Electromagnetic modes and photonic local densities of states	181
2.4	Optical transitions and wave functions of polarized excited states	184
2.5	The eigenmodes of polarization waves on nanorods	187
3.	Basic Optical Characteristics of Gold Nanoparticles	188
4.	Experimental Methods of Near-Field Optical Microscopy	190
5.	Near-Field Optical Imaging of Noble-Metal Nanoparticles	192
5.1	Near-field transmission spectra of spherical gold nanoparticles	192
5.2	Near-field optical images of gold nanorods	194
5.3	Near-field ultrafast pump-probe imaging of gold nanorod	197
5.4	Near-field two-photon excitation images of gold nanorods	199
6.	Near-Field Optical Imaging of Noble Metal Nanoparticle Assemblies	200
6.1	Localized optical field enhancement in spherical gold nanoparticle dimers	201
6.2	Electric-field enhancements in many-particle assemblies	203
7.	Concluding Remarks	204
	Acknowledgements	205
	References	205
6.	Photoexcited Ultrafast Electron Transfer and Molecular Dynamics in Condensed Phase	211

Yutaka Nagasawa and Masayasu Muramatsu

1. Introduction	211
2. Transition State Theory of Electron Transfer	213
3. Multi-dimensional Reaction Coordinate	214
4. Solvation Dynamics Measurement	216
4.1 Dynamic stokes shift (DSS) measurement	216
4.2 Three-pulse photon echo peak shift measurement (3PEPS)	219
5. Ultrafast ET in Electron Donating Solvents	224
6. Ultrafast ET in Ionic Liquids	227
6.1 Solvation dynamics in ionic liquids	227
6.2 Charge separation of 9,9'-bianthryl in ionic liquids	229
7. Ultrafast LMCT Dynamics of Plastocyanin	232
8. Conclusions	242
Acknowledgements	242
References	242
