

ADVANCES IN MULTI-PHOTON PROCESSES AND SPECTROSCOPY

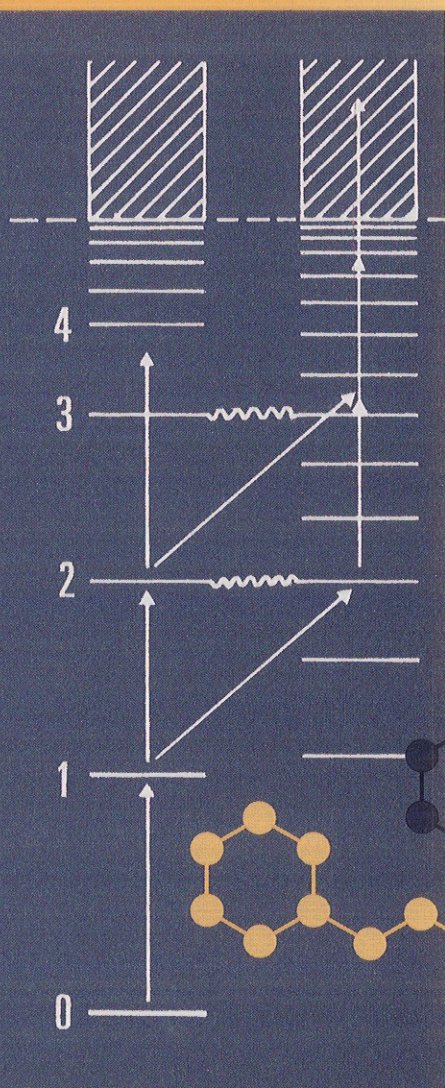

Volume 19

Edited by

S. H. Lin

A. A. Villaeys

Y. Fujimura

World Scientific

CONTENTS

Preface

v

1. Dynamics of the Vibrationally Excited Molecules and Clusters Studied by IR-UV and UV-IR Double Resonance Spectroscopy	1
<i>Takayuki Ebata</i>	
1. Introduction	1
2. Excitation Scheme and Experimental Setup	4
2.1. Picosecond IR-UV pump-probe spectroscopy for VER in S_0	4
2.2. UV-IR double resonance spectroscopy for VER in S_1	5
3. Picosecond Time-Resolved IR-UV Pump-Probe Study of VER in the Electronic Ground State	6
3.1. IVR of the OH stretching vibration of phenol and its isotopomer	6
3.2. IVR of the NH_2 stretching vibration of aniline and its isotopomer	9
3.3. IVR and VP of the OH stretch vibration of the H-bonded clusters of phenol	12
4. VER Dynamics in the Electronic Excited State Studied by UV-IR Double Resonance Spectroscopy — Application to 2-Naphthol and Its H-Bonded Clusters	18
4.1. IR spectra of 2-naphthol and its H-bonded clusters in the S_1 state	18
4.2. VER dynamics after the UV-IR excitation of bare 2-naphthol	19

4.3. VER dynamics after the UV-IR excitation of H-bonded clusters of 2-naphthol	21
4.3.1. 2-Naphthol-H ₂ O H-bonded cluster	21
4.3.2. 2-Naphthol-CH ₃ OH H-bonded cluster	22
4.3.3. 2-Naphthol-NH ₃ H-bonded cluster	22
4.3.4. Energetics and the dynamics of the H-bond dissociation and <i>cis</i> → <i>trans</i> isomerization of the H-bonded cluster of 2-naphthol	23
5. Conclusions and Outlook	25
Acknowledgments	26
References	26
2. Dynamics of a Liquid Droplet Excited by Infrared Multi-Photon Absorption	31
<i>Akira Terasaki</i>	
1. Introduction	31
2. Background of Liquid Droplet Dynamics	34
3. Time-Resolved Imaging Experiment	36
3.1. Experimental procedures	36
3.2. Resonant vibrational excitation	38
3.3. Excitation at resonance edge	44
3.4. Comparison between resonant and resonance-edge excitation	49
4. Model Simulation Using Molecular Dynamics	51
4.1. Simulation procedure	52
4.2. Collective motions	53
4.3. Energy dissipation processes upon hemisphere excitation	54
4.3.1. A typical disintegration process observed in snapshots	54
4.3.2. Critical energies in the disintegration dynamics	56
4.3.3. Dynamics in the unexcited region: A shock wave generated above a critical energy	59
5. Summary	63

Acknowledgments	64
References	64
 3. Electron Spectroscopy of Molecules in Intense Laser Fields	67
<i>M. Okunishi, G. Prümper and K. Ueda</i>	
1. Introduction	67
2. Experiment	72
3. Comparison Between Molecular and Atomic Electron Spectra	75
4. Photoelectron Angular Distributions in the Rescattering Region	83
4.1. Atomic case	84
4.2. Molecular case	86
5. Summary	88
Acknowledgments	89
References	89
 4. Selective Bond Breaking in Dissociative Ionization of Ethanol Induced by Tailored Intense Laser Fields	93
<i>Ryuji Itakura, Kaoru Yamanouchi, and Fumihiko Kannari</i>	
1. Introduction	93
2. Pulse Shaping Methods	94
3. Response of Ethanol to a Variety of Laser Pulse Shapes	97
3.1. Linear chirp dependence	97
3.2. Pulse train	101
3.3. Adaptive control	103
3.4. Frequency-doubled fields (2ω) and two-color fields ($\omega + 2\omega$)	106
4. Summary and Perspective	111
Acknowledgments	112
References	112

5. Evolution of Transient Structures in Solids and Liquids by Means of Time Resolved X-ray Diffraction and X-ray Absorption Fine Structure	117
<i>Jie Chen and Peter M. Rentzepis</i>	
1. Introduction	118
2. Ultrafast X-ray Spectroscopy	119
2.1. Experimental consideration	120
2.1.1. Pulsed X-ray sources	120
2.1.2. Detection system	122
2.1.3. Reaction initiation	122
2.2. Ultrafast X-ray system	123
2.2.1. Subpicosecond pulsed X-ray generation by femtosecond laser driven plasma	123
2.2.2. X-ray spectra	124
2.2.3. X-ray flux measurements	124
2.2.4. Efficient focusing of ultrafast hard X-rays	125
2.2.5. Ultrafast X-ray pulse duration measurement	128
2.2.6. Timing of X-ray pulse and femtosecond laser pulse	129
2.3. Ultrafast time resolved X-ray diffraction	130
2.4. Ultrafast time resolved X-ray absorption spectroscopy	131
2.4.1. Time resolved EXAFS	131
2.4.2. Experimental consideration	132
2.4.2.1. Comparison between EXAFS and X-ray diffraction	132
2.4.2.2. Energy dispersive spectrometer	134
2.4.2.3. Data analysis	135
2.4.2.4. Ultrafast EXAFS data reliability	136
3. Studies of Transient Structures by Means of Time Resolved X-ray Probing	138
3.1. Ultrafast lattice deformation and transient structures	138

3.1.1. Ultrafast X-ray diffraction experiments . . .	138
3.1.2. Lattice deformation and sonic wave generated by femtosecond laser pluses	139
3.1.3. A model for lattice deformation	143
3.2. Electron transfer mechanism and photochemistry of metal oxalates	144
3.2.1. Introduction	144
3.2.1.1. Photochemistry of ferrioxalate . . .	144
3.2.1.2. Electron transfer mechanism	145
3.2.1.3. Ultrafast experiments	148
3.2.2. Materials and absorption spectra	149
3.2.3. Time resolved optical measurements	150
3.2.3.1. Laser systems	150
3.2.3.2. Kinetics of ferrioxalate photoredox reaction excited by 266/267 nm . . .	151
3.2.3.3. Optical transient spectra and kinetics of trisoxalato cobaltate(III)	155
3.2.4. Time resolved EXAFS experiments	158
3.2.5. UHF and DFT theoretical calculation	159
3.2.6. Photodissociation and electron transfer mechanism	161
3.2.6.1. Histogram of Fe–O bond length change	161
3.2.6.2. Intermolecular electron transfer of ferrioxalate	165
3.2.6.3. Histogram of Co–O bond length change	166
3.2.6.4. Photodissociation and electron transfer	168
3.2.7. Photoelectron detachment and solvated electron	170
3.2.7.1. Solvated electron absorption spectra	170
3.2.7.2. Electron scavenging	170
3.2.7.3. Photoelectron detachment mechanism	172

3.2.7.4. Charge transfer to solvent band . . .	175
3.2.8. Photochemical quantum yield of ferrioxalate	176
3.2.9. Conclusion	178
4. Summary	179
Acknowledgments	179
References	180
 6. Photonic Crystals: From Innovation to Applications	185
<i>D. Gamra, W. Aroua, F. AbdelMalek and H. Bouchriha</i>	
1. Introduction	185
2. Fundamental and Background	187
2.1. Origin	187
2.2. Photonic band gap	189
3. Band Structure of Photonic Crystal	190
3.1. Band structure of 1D photonic crystal	191
3.2. Band structure of 2D and 3D photonic crystals . . .	193
3.2.1. Plane wave method	193
3.2.2. 2D Photonic crystals	193
3.2.3. 3D Photonic crystals	194
4. Waveguides and Coupling	196
4.1. Photonic crystal with defects	196
4.2. Transfer matrix method (TMM)	196
4.3. Reflectivity spectra of 1D photonic crystal	198
4.4. Defects in 2D photonic crystal	199
5. Optical Integrated Circuit	200
5.1. The finite difference time domain method (FDTD) .	201
5.2. Y-junction and SMF coupling	202
5.3. Y-junction with point defects coupled to a SMF . .	205
5.4. Coupling in integrated photonic circuit	207
6. Superluminal Propagation	209
7. Conclusions	211
References	211

7. Quantum Computing and Entanglement Generation Using Intramolecular Degrees of Freedom	213
<i>K. Mishima and K. Yamashita</i>	
1. Introduction	214
2. Generation of Entanglement and Arbitrary Superposition States Using Vibrational and Rotational Modes of Molecules	217
2.1. Scheme of generation of arbitrary quantum states in vibrational and rotational modes of molecules	217
2.2. Numerical calculation of generation of entanglement and arbitrary superposition states	218
3. Quantum Algorithms	221
3.1. Quantum gates	221
3.2. Deutsch–Jozsa algorithm	222
3.3. Optimal control theory (OCT)	224
3.4. Combination of intramolecular electronic and vibrational states	227
3.5. Combination of intramolecular vibrational and rotational states	232
3.6. Combination of intermolecular rotational states	235
4. Free-Time and Fixed End-Point Optimal Control Theory (FRFP-OCT)	245
4.1. FRFP-OCT in pure state	248
4.2. FRFP-OCT in dissipative media	252
5. Concluding Remarks	263
Acknowledgments	264
References	265
