

STUDENT CD-ROM INCLUDED

Pathophysiology

Functional Alterations
in Human Health

Carie A. Braun | Cindy M. Anderson

Expanded Contents

1 Introduction to Pathophysiology 1

Foundations of Pathophysiology 2

- Definition of Pathophysiology 2
- Related Sciences 2

Health–Illness Continuum 2

- Health 2
- Illness 3
- Disease 3

Using Pathophysiologic Terminology to Communicate 3

Global Health 6

Human Diversity and Disease 7

Functional Concepts of Altered Health 7

2 Basic Alterations in Cells and Tissues 10

Introduction 10

Review of Normal Cellular Structure and Function 11

- Cellular Components 11
- Cellular Function 12

Cellular Adaptation and Response to Stress 15

- Atrophy 16
- Hypertrophy 17
- Hyperplasia 17
- Metaplasia 17
- Dysplasia 17

Cellular Injury and Death 18

- Mechanisms of Cell Death 18
- Causes of Cell Injury and Death 19

Clinical Models 21

- Menopause 21
- Cardiac Hypertrophy 24
- Acromegaly 26
- Cervical Metaplasia and Dysplasia 29
- Air Pollution and Cardiovascular Disease 33

3 Inflammation and Tissue Repair 38

Introduction 38

Review of Body Defense Mechanisms 39

Acute Inflammation 40

- Vascular Response 40
- Cellular Response 43
- Resolution of Acute Inflammation 44

General Manifestations of Inflammation 44

Treating Acute Inflammation 45

Healing and Tissue Repair 46

- Covering the Wound 46
- Clearing the Debris 47
- Restoring Structural Integrity 47
- Restoring Functional Integrity 48
- Conditions That Promote Wound Healing 48
- Healing by Intention 49

Chronic Inflammation and Impaired Healing 49

- Cells of Chronic Inflammation 50
- Granuloma Formation 50

Complications of Healing and Tissue Repair 50

Clinical Models 52

- Burns 52
- Arthritis 55
- Gastritis 58
- Inflammatory Bowel Disease 60

4 Alterations in Immunity 66

Introduction 66

Review of Immune Function 67

- Cellular Components of Immunity 67
- Lymphatics 68
- Immune Processes 70

Process of Altering Immune Function 72

- Host Defense Failure 73
- Hypersensitivity 74
- Autoimmunity 79
- Alloimmunity 79

Immune Response Manipulation 81

- Treatment of Maladaptive Immune Responses 81
- Immune Response in Disease Management 82
- Immune Response in the Prevention of Disease 82

Clinical Models 83

- Immune Maladaptation: AIDS 83
- Immune Maladaptation: Anaphylactic Reaction 85
- Immune Maladaptation: Systemic Lupus Erythematosus 87
- Immune Maladaptation: Rh Isoimmunization 89

5 Infection 96

Introduction 96

Function of Resident Microbes 97

The Chain of Infection	97
Pathogen	97
Reservoir	104
Portal of Exit	105
Mode of Transmission	105
Portal of Entry	106
Host Factors	106
Phases of Acute Infection	106
Complications of Infection	106
Clinical Manifestations	107
Laboratory and Diagnostic Tests	107
Treatment Modalities	108
Clinical Models	108
Influenza	108
Hepatitis	109
The Function of the Liver	109
Viral Hepatitis	111
Urinary Tract Infection	114
Pelvic Inflammatory Disease	115
Tinea	116
Bacterial Meningitis	117
Infectious Disease Issues	119

6 Genetic and Developmental Disorders 122

Introduction	122
Components of the Genetic System	123
DNA	123
Genes	123
Genetic Replication	124
Impact of Genetics on Health	126
Patterns of Inheritance	127
Process of Altering Genetic Traits	129
Genetic Inheritance of Disease	129
General Manifestations of Altering Genetic Traits	135
Genetic Screening	135
Counseling	135
Diagnostic Strategies	135
Treating Genetic Alterations	136
Clinical Models	136
Autosomal Recessive Disorder: Sickle Cell Anemia	136
Mitochondrial Gene Disorder: Mitochondrial Encephalomyopathy; Lactic Acidosis; Stroke	139
Alteration in Chromosome Number (Autosome): Down Syndrome	140
Alteration in Chromosome Number (Sex Chromosome): Turner Syndrome	142
Sex-Linked Genetic Disorder: Fragile X Syndrome	144
Autosomal Dominant Genetic Disorder: Huntington Disease	145
Multifactorial Inheritance: Cardiovascular Disease	147
Developmental Maladaptation: Neural Tube Defects	148

7 Alterations in Cellular Proliferation and Differentiation 154

Introduction	154
Cellular Proliferation and Differentiation	155
Altered Cellular Proliferation and Differentiation	156
Carcinogenesis	156
Characteristics of Neoplasms	162
Paraneoplastic Syndromes	163
Benign Versus Malignant	163
Cancer Spread	164
Cancer Nomenclature	165
Cancer Classifications	167
Cancer Prognosis	167
General Manifestations	168
Diagnostic Tests	169
Cancer Treatment	169
Cancer Prevention	170
Children and Cancer	171
Clinical Models	171
Lung Cancer	171
Colorectal Cancer	173
Brain Cancer	174
Benign Prostatic Hyperplasia	177
Prostate Cancer	179
Testicular Cancer	180
Ovarian Cancer	181
Polycythemia Vera	183
Leukemia	183
Acute Lymphocytic and Myelogenous Leukemias	183
Chronic Lymphocytic and Myelogenous Leukemias	184
Lymphomas	185
Hodgkin's Lymphoma	185
Non-Hodgkin's Lymphoma	187

8 Alterations in Fluid, Electrolyte, and Acid-Base Balance 191

Introduction	192
Review of Fluid and Electrolyte Balance	192
Electrolyte Balance	192
Fluid Balance	194
Tonicity	197
Review of Acid-Base Balance	198
Regulation of Acid and Base	198
Altered Fluid Balance	200
Water Content	200
Altered Electrolyte Balance	203
Altered Sodium Balance	203
Altered Potassium Balance	204
Altered Chloride Balance	204
Altered Calcium Balance	204
Altered Magnesium Balance	205
Altered Phosphate Balance	205
Altered Acid-Base Balance	205
Metabolic Acidosis	205

Metabolic Alkalosis 207

Clinical Models 207

Altered Fluid Balance: Cirrhosis 207
 Altered Electrolyte Balance: Renal Tubulopathy 209
 Altered Acid-Base Balance: Highly Active Antiretroviral Therapy (HAART)-Associated Acidosis 211
 Altered Sodium Balance: Dehydration 212

9 Alterations in Neuronal Transmission 216

Introduction 217

Neural Structures Essential to Impulse Conduction 217

Neurons 217
 Supporting Cells 217

Review of Neuronal Transmission 218

Membrane Potential 218
 Action Potential 218
 Communication Between Neural Cells 219

Organization of the Nervous System 220

Central Nervous System 220
 Protective Structures of the Central Nervous System 223
 Peripheral Nervous System 225
 Reflex Arcs 228

Developmental Considerations 229

Processes of Cell Injury 230

Central Nervous System Cell Injury 230
 Parasympathetic Nervous System Cell Injury 230

Mechanisms of Injury 231

Traumatic Injury 231
 Ischemic Injury 233
 Excitation Injury 233
 Pressure Injury 234
 Altered Neuronal Transmission 236

Clinical Models 237

Cerebral Palsy 237
 Multiple Sclerosis 240
 Hydrocephalus 242
 Incomplete Spinal Cord Transection 245
 Depression 247

10 Alterations in Sensory Function and Pain Perception 253

Introduction 254

Somatosensory System 254

Classes of Sensory Receptors 254
 Neuronal Organization 254
 Somatosensory Neuronal Transmission 255
 Somatosensory Processing 256

Vision 257

Visual Structures and Functions 257
 Control of Eye Movement 258
 Protective Eye Structures 259
 Alterations in Visual Function 260

Manifestations and Evaluation of Alterations in Vision 262

Treatment of Alterations in Vision 262

Hearing 262

Structural Components of the Ear 262
 Hearing Processes 264
 Alterations in Hearing and Balance 264
 Treatment of Alterations in Hearing 266

Taste 267

Smell 267

Pain 267

Characterization of Pain 267
 Conduction of Pain Sensation 267
 Theories of Pain 267
 Manifestations and Evaluation of Pain 269
 Treatment of Pain 270

Clinical Models 270

Fibromyalgia 271
 Migraine Headache 272
 Otitis Media 274
 Ménière's Disease 275
 Macular Degeneration 276
 Glaucoma 278

11 Alterations in Hormonal and Metabolic Regulation 284

Introduction 285

Function and Regulation of Hormones 285

Integrating Endocrine, Neuronal, and Defense Mechanisms in the Body 285
 Regulating Hormones 285
 Mediating Cell-to-Cell Communication 288

Stress Response 289

Altered Hormone Function 292

Process of Altering Hormone Function 292
 General Manifestations of Altered Hormone Function 294
 Diagnosing and Treating Altered Hormone Function 294

Clinical Models 295

Female Reproductive Hormone Function 295
 Male Reproductive Hormone Function 298
 Antidiuretic Hormone Function 299
 Thyroid Hormone Function 302
 Adrenal Hormone Function 304

12 Alterations in Ventilation and Diffusion 310

Introduction 310

Pulmonary Structure and Function 311

Ventilation 312
 Diffusion 313

Impaired Ventilation 315

Impaired Ventilation-Perfusion Matching 316

Impaired Diffusion 316

The Effects of Impaired Ventilation and Diffusion	316
Hypoxemia and Hypoxia	318
Hypercapnia	318
General Manifestations of Impaired Ventilation and Diffusion	318
Laboratory and Diagnostic Tests	320
Treating Impaired Ventilation and Diffusion	321
Clinical Models	321
Pneumonia	322
Tuberculosis	325
Chronic Obstructive Pulmonary Disease	328
Cystic Fibrosis	334
Acute Respiratory Distress Syndrome	336

13 Alterations in Perfusion 341

Introduction	341
Perfusion	342
From Ventilation to Perfusion	342
Circulation	342
Movement of Blood Through the Circulation	344
Altered Perfusion	350
Ventilation-Perfusion Mismatching	350
Impaired Circulation	350
Inadequate Cardiac Output	353
Excessive Perfusion Demands	355
General Manifestations of Altered Perfusion	355
Diagnosing and Treating Altered Perfusion	355
Clinical Models	355
Hypertension	357
Shock	359
Myocardial Infarction	362
Heart Failure	364
Stroke	368
Disseminated Intravascular Coagulation	370

14 Alterations in Nutrition 374

Introduction	374
Nutrition	375
Water	375
Macronutrients: Proteins, Lipids, and Carbohydrates	375
Micronutrients: Vitamins and Minerals	376
Nutritional Intake Requirements	379
Intake and Storage of Nutrients	380
Digestion	380
Absorption	387
Glucose and Fructose Absorption	387
Amino Acid and Small Peptide Absorption	388
Fatty Acid and Glycerol Absorption	388
Altered Nutrition	389
Inherited Metabolic Disorders	389
Undernutrition	390
Overnutrition	395

Malabsorption	395
General Manifestations of Altered Nutrition	396
Diagnostic and Treatment Strategies Related to Altered Nutrition	396
Clinical Models	396
Iron-Deficiency Anemia	396
Anorexia Nervosa	398
Celiac Disease (Gluten-Sensitive Enteropathy)	400
Obesity	401

15 Alterations in Elimination 406

Introduction	407
Review of the Processes of Elimination	407
Urinary Elimination	407
Bowel Elimination	410
Processes of Altered Elimination	414
Alteration in Motility	414
Altered Neuromuscular Function	415
Altered Perfusion	415
Alteration in Patency	415
General Manifestations of Altered Elimination	418
Urinary Manifestations	418
Gastrointestinal Manifestations	419
Diagnosis of Altered Elimination	420
Diagnosis of Conditions of the Renal and Urinary Systems	420
Diagnosis of Conditions of the Large Colon	421
Treatment of Altered Elimination	421
Treatment of Altered Urinary Elimination	421
Treatment of Altered Gastrointestinal Elimination	421
Clinical Models	422
Urolithiasis	422
Urinary Incontinence	424
Polycystic Kidney Disease	425
Diverticular Disease	429
Encopresis	430

16 Degenerative Changes in Aging 434

Introduction	434
Review of the Processes of Aging	435
Age-Related Cellular Changes	435
General Manifestations of Aging	437
Cellular Changes in Aging	437
Aging and Appearance	437
Fluid and Electrolyte Balance	438
Alterations in Immune Responses	438
Age-Related Proliferative Changes	438
Alteration in Neurologic Function in Aging	439
Impaired Mobility	439
Age-Related Changes in Perfusion and Ventilation	440
Age-Related Changes in Metabolic Processes	440
Alterations in Nutrition and Elimination in Aging	441

Treating Degenerative Changes in Aging Populations 443**Clinical Models** 443

- Osteoporosis 443
- Parkinson's Disease 447
- Alzheimer's Disease 451

17**Combining Complex Pathophysiologic Concepts: Diabetes Mellitus** 458**Introduction** 458**Glucose, Insulin, Energy, and the Pancreas** 459**Diabetes Mellitus** 460

- Insulin Deficit: Type 1 Diabetes Mellitus 461
- Insulin Resistance and Reduction: Type 2 Diabetes 464
- Gestational Diabetes 467

Acute Complications of Diabetes Mellitus 467

Hypoglycemia 467

Diabetic Ketoacidosis 468

Hyperglycemic Hyperosmolar Nonketotic Syndrome 469

The Somogyi Effect and Dawn Phenomenon 469

Chronic Complications of Diabetes Mellitus 470

Microvascular Complications 471

Macrovascular Complications 471

Neuropathies 472

Infection 472

Glossary 477**Index** 503
